CERTIFICATION

I, Mark E. Robbins, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 1926 Longfellow Avenue and 1939 West Farms Road, (NYC VCP Site Nos. 14CVCP226X and 14CVCP229X). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Qualified Environmental Professional

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

Site A is located at 1926 Longfellow Avenue in the West Farms section in Bronx, New York and is identified as Block 3016 and Lot 38 on the New York City Tax Map. Site A is 6,678-square feet and is bounded by a 2-story hotel to the north, a 1-story religious institution to the south, 1-story stonework warehouse to the east, and Longfellow Avenue to the west. Currently, the Site is used for parking.

Site B is located at 1939 West Farms Road in the West Farms section in Bronx, New York and is identified as Block 3016 and Lot 50. Lot 50 is consists of vacant land and is 20,736-square feet. Site B is bounded by a 2-story hotel and parking area to the west, Boston Road to the north, West Farms Road to the east and a 1-story stonework warehouse to the south.

Summary of Proposed Redevelopment Plan

The proposed future use of Site A will consist of an 8-story residential and commercial building with a cellar. The current zoning designation is R8X with a commercial overlay of C2-4. The proposed use is consistent with existing zoning for the property. The cellar slab will be at a depth of 12 feet below grade. The maximum depth of excavation is for the footings is anticipated to be 14 feet below grade. The ground floor will consist of a residential lobby and commercial space. Remaining floors two through eight will consist of affordable housing residential space. The building will occupy the entire footprint of the lot, with no setbacks.

The proposed future use of Site B will consist of a 14-story residential and commercial building with a cellar. The ground floor will consist of a residential lobby and commercial space. Remaining floors two through fourteen will consist of affordable housing residential space. The cellar slab will be at a depth of 12 feet below grade. The maximum depth of excavation is for the footings is anticipated to be 14 feet below grade. The cellar will contain a parking garage. The

building will occupy the entire footprint of the lot, with no setbacks. The proposed development plans are provided in **Appendix B**.

Layout of the proposed site developments is presented in **Figure 3**.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of the Phase I Environmental Site Assessment (ESA) Report prepared by Tenen Environmental dated June 2013, the historical uses of both sites were established. Both sites were developed prior to 1868. Site A was historically used as a carriage house from 1985 through 1896 and as parking and a rear yard for an auto repair shop from 1901 through 2007.

Site B was historically used as a wagon factory during 1901, various commercial including a theater, offices, auto repairs from 1926 through 1950, motor freight operation from 1950 through 1995 and an auto repair shop during 2005.

Shri Sainath, LLC, currently owns both Site A and Site B.

The AOCs identified for this site include:

1. The presence of urban fill material beneath Site A and Site B.

Summary of the Work Performed under the Remedial Investigation

The scope of work implemented by Hydro Tech included:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 4 soil borings at Site A, and collected 8 soil samples for chemical analysis from the soil borings to evaluate soil quality; installed 6 soil borings at Site B and collected 12 soil samples for chemical analysis;
3. Installed 2 groundwater monitoring wells at Site A and 3 wells at Site B and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed 3 soil vapor probes at Site A and 5 at Site B and collected 8 samples for chemical analysis.
5. Collected 1 ambient outdoor air sample.

Summary of Environmental Findings

1. Elevation of the property ranges from 20 to 30 feet above sea level.
2. Depth to groundwater ranges from 16.61 to 18.47 feet at the Site.
3. Site specific groundwater flow was not determined during this RI, however, regional groundwater flow is generally from west to east beneath the Site.
4. Depth to bedrock at the sites is between 10 to 20 feet.
5. The stratigraphy of the sites, from the surface down, consists of 4 to 14 feet of asphalt, concrete, sand, brick and pebbles (urban fill) underlain by brown medium to fine grained sand and silt.
6. Site A: The soil samples collected from Site A during the RI showed that no VOCs are present in the soil at concentrations exceeding the Unrestricted Use SCOs. Total VOCs ranged from non-detect to 0.0061 ppm. SVOCs including Benzo(a)Anthracene (maximum of 3.0 ppm), Benzo(a)Pyrene (maximum of 3.25 ppm), Benzo(b)Fluoranthene (maximum of 2.93 ppm), Dibenzo(a,h)Anthracene (maximum of 0.45 ppm) and Indeno(1,2,3-cd)Pyrene (maximum of 0.767 ppm) exceeded Track 2 Restricted Residential SCOs. Benzo(k)Fluoranthene (maximum of 3.17 ppm) and Chrysene (maximum of 3.76 ppm) also exceeded Unrestricted Use SCOs. Pesticides including 4,4'-DDD (maximum of 0.00641), 4,4'-DDE (maximum of 0.00435) and 4,4'-DDT (maximum of 0.00865) exceeded Unrestricted Use SCOs in shallow and deep soil samples. Metals including arsenic (maximum of 20.7 ppm), barium (maximum of 634 ppm), copper (maximum of 348 ppm), lead (maximum of 1,410 ppm), manganese (maximum of 2,330 ppm), and mercury (maximum of 2.86 ppm) exceeded Restricted Residential Use SCOs.
7. Site B: The soil samples collected from Site B during the RI showed that no VOCs are present in the soil at concentrations exceeding the Unrestricted Use SCOs. Total VOCs ranges from non-detect to 6.9 ppm. TCE and PCE were not detected in any of the soil samples. The SVOCs including Benzo(a)Anthracene (maximum of 63.5 ppm), Benzo(a)Pyrene (maximum of 59.1 ppm), Benzo(b)Fluoranthene (maximum of 44.1 ppm), Benzo(k)Fluoranthene (maximum of 53.3 ppm), Chrysene (maximum of 58.5 ppm), Dibenzo(a,h)Anthracene (maximum of 8.4 ppm), Fluoranthene (maximum of 137 ppm), Indeno(1,2,3-cd)Pyrene (maximum of 26.7 ppm), Phenanthrene (maximum of 132

ppm) and Pyrene (maximum of 102 ppm) were detected exceeding Unrestricted Use as well as Restricted Residential Use SCOs in both shallow and deep soils. No PCBs were detected in any of the soil samples at concentrations exceeding the Unrestricted Use SCO. Pesticides including 4,4'-DDD (maximum of 0.0244 ppm), 4,4'-DDE (maximum of 0.0103 ppm) and 4,4'-DDT (maximum of 0.0342 ppm) exceeded Unrestricted Use SCOs. Metals including barium (maximum of 432 ppm), copper (maximum of 73.3 ppm), lead (maximum of 399 ppm), mercury (maximum of 1.04 ppm), zinc (maximum of 683 ppm) and trivalent chromium (maximum of 33.1 ppm) exceeded Unrestricted Use SCOs. Barium and mercury also exceeded Restricted Residential Use SCOs.

8. Site A: Groundwater samples collected during the RI showed no VOCs, pesticides or PCBs present in the groundwater at concentrations exceeding the NYSDEC 6 NYCRR Part 703.5 Groundwater Quality Standards (GQS). Total VOCs range from 8.3 ppb to 18.9 ppb. One SVOCs, Bis(2-ethylhexyl)phthalate, was detected in both samples at concentrations exceeding the GQS (maximum of 6.44 ppb). PCE and TCE were not detected in any of the groundwater samples. Several metals including barium, lead, magnesium, manganese and selenium were identified but only magnesium and selenium were detected in the groundwater exceeding the GQS.
9. Site B: Groundwater samples collected during the RI showed no VOCs, SVOCs, pesticides or PCBs are present in the groundwater at Site B at concentrations exceeding the GQS. PCE and TCE were not detected in the groundwater sample. Metals including barium, chromium, copper, lead, manganese and nickel were identified but none exceeded GQS.
10. Site A: Soil vapor samples collected during the RI showed the presence of petroleum and chlorinated VOCs in the soil vapors beneath Site A. The concentrations of the detected VOCs are generally below 100 ug/m^3 , with the exception of acetone (maximum of 800 ug/m^3). PCE (maximum of 23 ug/m^3) was detected in all three soil vapor samples and TCE was detected in one vapor sample at 46 ug/m^3 . TCA and carbon tetrachloride were not detected in any sample. Concentrations of TCE are above the monitoring level range established by NYSDOH soil vapor matrix guidance values.
11. Site B: Soil vapor samples collected during the RI showed the presence of petroleum and chlorinated VOCs in the soil vapors at low concentrations. The concentrations of the detected VOCs are generally below 100 ug/m^3 , with the exception of Acetone (maximum of $1,300 \text{ ug/m}^3$) and Methylene Chloride (maximum of 250 ug/m^3). PCE (maximum of

68 ug/m³) were detected in four of five the soil vapor samples at Site B. TCA, TCE and carbon tetrachloride were not detected in any of the soil vapor samples from Site B. PCE concentrations are below the monitoring level range established by NYSDOH soil vapor matrix guidance values.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Shri Sainath, LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate two sites located at 1926 Longfellow Avenue (Site A) and 1939 West Farms Road (Site B) in the West Farms section of Bronx, New York. Mixed commercial and residential use is proposed for both sites. The RI work was performed between August 20th and August 27th, 2013. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

Site A is located at 1926 Longfellow Avenue in the West Farms section in Bronx, New York and is identified as Block 3016 and Lot 38 on the New York City Tax Map. Site A is 6,678-square feet and is bounded by a 2-story hotel to the north, a 1-story religious institution to the south, 1-story stonework warehouse to the east, and Longfellow Avenue to the west. Currently, the Site is used for parking.

Site B is located at 1939 West Farms Road in the West Farms section in Bronx, New York and is identified as Block 3016 and Lot 50. Lot 50 consists of vacant land and is 20,736-square feet. Site B is bounded by a 2-story hotel and parking area to the west, Boston Road to the north, West Farms Road to the east and a 1-story stonework warehouse to the south.

Figure 1 shows the Site locations and **Figure 2** shows a map of the site boundaries.

1.2 Proposed Redevelopment Plan

The proposed future use of Site A will consist of an 8-story residential and commercial building with a cellar. The current zoning designation is R8X with a commercial overlay of C2-4. The proposed use is consistent with existing zoning for the property. The cellar slab will be at a depth of 12 feet below grade. The maximum depth of excavation for the footings is anticipated to be 14 feet below grade. The ground floor will consist of a residential lobby and commercial space. Remaining floors two through eight will consist of affordable housing residential space. The building will occupy the entire footprint of the lot, with no setbacks.

The proposed future use of Site B will consist of a 14-story residential and commercial building with a cellar. The ground floor will consist of a residential lobby and commercial space. Remaining floors two through fourteen will consist of affordable housing residential space. The cellar slab will be at a depth of 12 feet below grade. The maximum depth of excavation is for the footings is anticipated to be 14 feet below grade. The cellar will contain a parking garage. The building will occupy the entire footprint of the lot, with no setbacks. The proposed development plans are provided in **Appendix B**.

Layout of the proposed site developments is presented in **Figure 3**.

1.3 Description of Surrounding Property

The sites are located in a commercial and residential neighborhood. Within a 500-foot radius of the Site, there is a variety of land use including commercial, residential, and industrial. The following sensitive receptors are located within a 500-foot radius of the Site:

- NYC Public School 6, located approximately 300 feet northwest of Site A.
- NYC Public School 214, located immediately east of Site B across West Farms Road.

Previous **Figure 2** shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of the Phase I Environmental Site Assessment (ESA) Report prepared by Tenen Environmental dated June 2013, the historical uses of both sites were established. Both sites were developed prior to 1868. Site A was historically used as a carriage house from 1985 through 1896 and as parking and a rear yard for an auto repair shop from 1901 through 2007.

Site B was historically used as a wagon factory during 1901, various commercial including a theater, offices, auto repairs from 1926 through 1950, motor freight operation from 1950 through 1995 and an auto repair shop during 2005.

Shri Sainath, LLC, currently owns both Site A and Site B.

2.2 Previous Investigations

Previous investigations at the Site include a June 2013 Phase I ESA prepared by Tenen Environmental. The following recognized environmental conditions were identified:

- The historical industrial and commercial uses of the site and adjacent properties

2.3 Site Inspection

The Site inspection was performed on August 20, 2013 by Sasha Rothenberg under the direction of the Qualified Environmental Professional (QEP) certifying the report to evaluate areas of the concern, Mark E. Robbins. All portions of Site A and B were inspected. Site A was observed to be a parking lot paved with asphalt. Site B was observed to be a vacant lot enclosed by a metal chainlink fence. The inspection did not identify any environmental concerns.

2.4 Areas of Concern

The AOCs identified for this site include:

2. The presence of urban fill material and contamination across Site A and Site B due to the past use of the Sites.

The Phase 1 Report is presented in **Appendix A**. A map showing areas of concern is presented in **Figure 4**.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Mark E. Robbins.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

The scope of work implemented by Hydro Tech included:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed 4 soil borings at Site A, and collected 8 soil samples for chemical analysis from the soil borings to evaluate soil quality; installed 6 soil borings at Site B and collected 12 soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed 2 groundwater monitoring wells at Site A and 3 groundwater monitoring wells at Site B and collected 3 groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed 3 soil vapor probes at Site A and 5 soil vapor probes at Site B and collected 8 samples for chemical analysis.
5. Collected 1 ambient outdoor air sample.

Photographs of the fieldwork are provided as **Appendix B**.

4.1 Geophysical Investigation

No geophysical survey was performed.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of four (4) soil borings were installed at Site A and six (6) at Site B to depths ranging from 6 to 14 feet below grade surface (bgs) during the remedial investigation. All borings at Site A were installed to 14 feet bgs, with the exception of SP-2, which was installed to 6 feet bgs. All borings at Site B were installed to 14 feet bgs with the exception of SP-4, which was installed to 12 feet bgs. The soil borings were installed utilizing Hydro Tech's track-mounted Geoprobe® 6620DT, a remotely operated probe hydraulic unit. This unit installs soil probes utilizing direct-push technology.

A map showing the location of soil borings is shown in **Figure 5**.

Soil samples were collected in all soil borings at 2-foot intervals utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners. The Macro sampler allows for the collection of both continuous and discrete soil samples. Each sampler was installed with 1½-inch diameter drill rods. Groundwater was not encountered during the installation of the soil borings.

The sample collection initially involved the installation of a Macro Core sampler to the desired sampling depth. A piston stop-pin was then removed from the top of the Macro Core sampler and then installed the length of the sampling interval. The sampler was then removed from the ground with the sample intact in the acetate liner. Continuous soil samples were collected during soil probe installation. A total of twenty-one (20) soil samples were collected for laboratory analysis. A total of ten (10) shallow samples from zero to 2 feet bgs and ten (10) deep samples from 6 to 14 feet bgs.

Separate aliquots of each soil sample were placed into airtight ziploc bags. The Hydro Tech geologist then characterized each soil sample in the field. The soil characterization consisted of determining the soil classification utilizing the Unified Soil Classification System and screening each sample for organic vapors utilizing a Photoionization Detector (PID).

A PID makes use of the principle of photoionization for the detection and qualitative measurement of organic vapors. A PID does not respond to all compounds similarly, rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to the compound isobutylene, as published by the manufacturer. The PID has a minimum detection limit of 0.1 parts per million (ppm). This meter measures the hydrocarbon concentrations in isolated portions of the secured samples.

Headspace analyses were conducted on each soil sample by partially filling a ziploc bag and sealing it, thereby creating a void. This void is referred to as the sample headspace. To facilitate the detection of any hydrocarbons contained within the headspace, the container was agitated for a period of 30 seconds. The probe of the PID was placed within the headspace to measure the organic vapors present.

Boring logs were prepared by a geologist are attached in **Appendix C**. A map showing the location of soil borings and monitor wells is shown in **Figure 5**.

Groundwater Monitoring Well Construction

Two (2) groundwater monitoring wells were installed at Site A and three (3) at Site B to determine water quality and the site specific flow direction at the Site. The monitoring wells were installed utilizing Hydro Tech's track-mounted Geoprobe® 6620DT. All of the monitoring wells are constructed of 1-inch diameter PVC. The total depth of the monitoring wells is 20 feet below grade, with the exception of MW-2 and MW-3 installed at Site B. These wells were installed until refusal was encountered due to bedrock (18 and 19 feet below grade, respectively). The screened interval of all wells was placed so that it straddles the water table.

Monitoring well locations are shown in **Figure 5**.

Survey

A land survey was used to identify the location of all soil borings and monitor wells. The groundwater monitoring wells were surveyed and monitored. The monitoring well construction details are provided in **Appendix D**.

Water Level Measurement

Groundwater head measurements were collected utilizing a Solinst® 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch.

The depth to water was measured in the well from the northern portion of the casing top. Water level data is included in Table 1. As Table 1 indicates, MW-2 and MW-3 installed at Site B were dry. The groundwater in the remaining wells was encountered between 16.61 and 18.47 feet bgs at the Site.

Soil Vapor Probe Construction

Threes (3) soil vapor probes were installed at Site A and five (5) soil vapor probes were installed at Site B during this RI. A map showing the locations of the soil vapor borings is shown in **Figure 5**. All soil vapor probes were installed to 6 feet bgs.

The soil vapor probes were installed utilizing similar technology as the soil probes in accordance with the NYSDOH Guidance of Evaluating Soil Vapor Intrusion, dated October 2006. Each soil vapor sampling point consisted of a stainless steel screen, or implant, fitted with dedicated polyethylene tubing. Each of the implants is of 1½-inch diameter. The soil vapor implant was installed in the subsurface soil. Glass beads were poured into the hole to fully

encompass the screen implant and the hole was sealed with bentonite and quick dry-lock non-VOC quick set cement.

After installation of the probes, one to three volumes were purged prior to collecting the samples. Three (3) soil vapor samples were collected from Site A and five (5) from Site B for chemical analysis during this RI.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Twenty (20) soil samples were collected for chemical analysis during this RI. One (1) shallow and one (1) deeper soil sample was collected from soil probes SP-1 through SP-4 at Site A and SP-1 through SP-6 at Site B. All soil samples were collected utilizing a 4-foot long Macro Core sampler fitted with dedicated acetate liners.

The soil was screened and characterized at 2-foot intervals. At least two soil samples from the probes were containerized and analyzed at a New York State Department of Health ELAP-certified laboratory. All of the soil samples collected were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile compounds (SVOCs) via EPA Method 8270BN, pesticides/PCBs via EPA Method 8081/8082, TAL metals and Chromium Trivalent, Chromium Hexavalent. Data on soil sample collection from Site A for chemical analyses, including dates of collection and sample depths, is reported in **Tables 2, 3, 4 and 5**. Data on soil sample collected for chemical analyses from Site B is reported in **Tables 11, 12, 13 and 14**.

Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

A QA/QC for soil sampling was performed and included one field blank and one trip blank for one trip. The field blank was obtained following the sampling of soil probe SP-3 from Site A.

All samples were properly handled and placed into the appropriately labeled containers. The samples were placed in a cooler filled with ice and maintained at a maximum 4 degrees Celsius. All samples were transmitted under proper chain of custody procedures to a State-certified (ELAP) laboratory for confirmatory laboratory analyses.

All holding times were met. The laboratory did not report any irregularities with respect to their internal Quality Assurance/Quality Control.

Groundwater Sampling

Two (2) groundwater samples were collected from Site A and one (1) from Site B for chemical analysis during this RI. Groundwater sample collection data from Site A is reported in **Tables 6, 7, 8** and **9**. Groundwater sample collection data from Site B is reported in **Tables 15, 16, 17** and **18**. **Figure 5** shows the location of groundwater sampling.

Initially, groundwater wells MW-1 and MW-2 at Site A and MW-1 at Site B were purged 3 to 5 well volumes. Monitoring wells MW-2 and MW-3 at Site B were found to be dry. Groundwater samples were obtained utilizing a peristaltic pump and dedicated tubing. Each groundwater sample collected at MW-1 and MW-2 at Site A and MW-1 at Site B was placed into 3 pre-cleaned 40-milliliter (mL) vials, 2 pre-cleaned 250 mL plastic containers, 1 pre-cleaned 500 mL plastic container and 2 pre-cleaned 1,000 mL jars and appropriately labeled. The groundwater samples from the three wells were analyzed for volatile organic compounds (VOCs) via EPA Method 8260, semi-volatile organic compounds (SVOCs) via EPA Method 8270, Pesticides/PCBs via EPA Method 8081/8082, TAL Metals (filtered and non-filtered), Chromium Trivalent and Chromium Hexavalent.

Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Three (3) soil vapor probes were installed at Site A and three (3) soil vapor samples were collected for chemical analysis from Site A during this RI. Five (5) soil vapor probes were

installed at Site B and five (5) soil vapor samples were collected for chemical analysis from Site A during this RI.

Soil vapor sampling locations are shown in **Figure 5**. Soil vapor sample collection data is reported in **Table 10** for Site A and **Table 19** for Site B. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

A soil vapor sample from each soil vapor probe was collected utilizing 6-liter pre-cleaned, passivated, evacuated whole air Summa[®] Canister. A 12-inch by 12-inch piece of plastic sheeting was sealed with beeswax around the edges over the sampling probe in order to keep the tracer gas in contact with the probe and the ambient air from entering the probe during testing.

In order to insure the integrity of the borehole seal and to verify that ambient air is not inadvertently drawn into the sample, a tracer gas, Helium, was used to enrich the atmosphere in the immediate vicinity of the sampling location.

Plastic sheeting was used to keep the tracer gas in contact with the soil vapor probe during the sampling. Prior to soil vapor sampling, approximately 0.3 liters of air was purged out of all vapor points utilizing a syringe.

The Summa Canisters were calibrated for 4 hours and the soil vapor sampling was run on each canister for a time period of 4 hours. The initial vacuum (inches of mercury) and start time was recorded immediately after opening each Summa Canister. After the sampling was complete, the final vacuum and top time was recorded.

After the soil vapor sampling, each Summa was labeled and sent to a laboratory certified to perform air analysis in New York State and analyzed for VOCs via EPA TO-15.

Additionally, one (1) outdoor ambient air sample was collected during this RI.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phil Murphy
Chemical Analytical	Chemical analytical laboratory(s) used in the RI is NYS ELAP

Laboratory	certified and were York Analytical Laboratories
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in **Tables 2** through **19**. Laboratory data deliverables for all soil, groundwater and soil vapor samples evaluated in this RIR are provided in digital form in **Appendix E**.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the sites, from the surface down, consists of 2 to 14 feet of asphalt, concrete, sand, brick and pebbles (urban fill) underlain by brown medium to fine grained sand and silt. Bedrock was encountered at depths of 18 to 19 feet below grade.

Hydrogeology

A table of water level data for all monitor wells is included in **Table 1**. The average depth to groundwater is 17.75 feet and the range in depth is 16.61 to 18.47 feet. Two of the monitoring wells at Site B were found to be dry. This is most likely due to the high frequency of bedrock in the area, which may be influencing groundwater flow. Due to the locations of the three wells that do contain water, a groundwater flow direction could not be determined.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Sites. A summary table of data for chemical analyses performed on soil samples from Site A is included in **Tables 2** through **5**. **Figures 6, 7, and 8** show the location and posts the values for soil/fill at Site A that exceed the 6 NYCRR Part 375-6.8 Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs) and Restricted Residential Use (Track 2) SCOs. The soil samples collected from Site A during the RI showed that no VOCs are present in the soil at concentrations exceeding the Unrestricted Use SCOs. Total VOCs range from non-detect in SP-1 (0-2), SP-1 (12-14), SP-2 (12-14), SP-3 (12-14) and SP-4 (0-2) to 0.0061 ppm in SP-3 (0-2). Trichloroethylene (TCE) was not detected in any of the soil samples. Tetrachloroethylene (PCE) was detected in SP-4 (12-14) at a concentration of 0.006 ppm. SVOCs were detected at Site A in one of the four shallow soil samples and two of the four deep soil samples at concentrations exceeding the Track 1 and 2 SCO. Benzo(k)Fluoranthene (maximum of 3.17 ppm) and Chrysene (maximum of 3.76 ppm) exceeded Track 1 SCOs, and Benzo(a)Anthracene (maximum of 3.0 ppm), Benzo(a)Pyrene (maximum of 3.25 ppm), Benzo(b)Fluoranthene (maximum of 2.93 ppm), Dibenzo(a,h)Anthracene (maximum of 0.45 ppm) and Indeno(1,2,3-cd)Pyrene (maximum of 0.767 ppm) exceeded Track 2 SCOs. Pesticides were detected in the soil at Site A in three of the four shallow samples and two of the four deep samples at concentrations exceeding the Track 1 SCOs. These pesticides include 4,4'-DDD

(maximum of 0.00641), 4,4'-DDE (maximum of 0.00435) and 4,4'-DDT (maximum of 0.00865). 11 metals were detected in the shallow and deep soil at Site A at concentrations exceeding the Track 1 and 2 SCOs. The metals exceeding Track 2 include Arsenic (maximum of 20.7 ppm), Barium (maximum of 634 ppm), Copper (maximum of 348 ppm), Lead (maximum of 1,410 ppm), Manganese (maximum of 2,330 ppm), and Mercury (maximum of 2.86 ppm).

A summary table of data for chemical analyses performed on soil samples from Site B is included in **Tables 11** through **14**. **Figures 9, 10** and **11** show the location and posts the values for soil/fill at Site B that exceeds the 6 NYCRR Part 375-6.8 Unrestricted Use (Track 1) Soil Cleanup Objectives (SCOs) and Restricted Residential Use (Track 2) SCOs. The soil samples collected from Site B during the RI showed that no VOCs are present in the soil at concentrations exceeding the Unrestricted Use SCOs. Total VOCs ranges from non-detect in SP-2 (12-14) and SP-3 (12-14) to 6.9 ppm SP-1 (12-14). TCE and PCE were not detected in any of the soil samples. SVOCs were detected at Site B in five of the six shallow soil samples and three of the six deep soil samples at concentrations exceeding the Track 1 and 2 SCO. The SVOCs exceeding Track 2 SCO include Benzo(a)Anthracene (maximum of 63.5 ppm), Benzo(a)Pyrene (maximum of 59.1 ppm), Benzo(b)Fluoranthene (maximum of 44.1 ppm), Benzo(k)Fluoranthene (maximum of 53.3 ppm), Chrysene (maximum of 58.5 ppm), Dibenzo(a,h)Anthracene (maximum of 8.4 ppm), Fluoranthene (maximum of 137 ppm), Indeno(1,2,3-cd)Pyrene (maximum of 26.7 ppm), Phenanthrene (maximum of 132 ppm) and Pyrene (maximum of 102 ppm). No PCBs were detected in any of the soil samples at concentrations exceeding the Track 1 SCO. Pesticides were detected in five of the six shallow soil samples and two of the six deep soil samples at concentrations exceeding the Track 1 SCO. These pesticides include 4,4'-DDD (maximum of 0.0244 ppm), 4,4'-DDE (maximum of 0.0103 ppm) and 4,4'-DDT (maximum of 0.0342 ppm). Six metals were detected in the deep and shallow soil at concentrations exceeding the Track 1 and Track 4. SCOs exceeding Track 1 include Copper (maximum of 73.3 ppm), Lead (maximum of 399 ppm), Zinc (maximum of 683 ppm) and Trivalent Chromium (maximum of 33.1 ppm). Additionally, two metals were detected in the deep and shallow soil samples from SP-1 at concentrations exceeding the Track 2 SCOs: Barium (maximum of 432 ppm) and Mercury (maximum of 1.04 ppm).

These results indicate the presence of urban fill material in the shallow and deep soil at both sites.

5.3 Groundwater Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Sites. A summary table of data for chemical analyses performed on groundwater samples from Site A is included in **Tables 6, 7, 8 and 9**. **Figures 12 and 13** show the locations and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards (GQS). Groundwater samples collected during the RI showed no VOCs, pesticides or PCBs the Part 703.5 GQS. Total VOCs range from 8.3 ppb in MW-2 to 18.9 ppb in MW-1.). PCE and TCE were not detected in either of the groundwater samples. One SVOCs, Bis(2-ethylhexyl)phthalate, was detected in both samples at concentrations exceeding the GQS (maximum of 6.44 ppb). Five (5) metals (Barium, Lead, Magnesium, Manganese and Selenium) were detected in unfiltered groundwater samples at concentrations above their respective GQS. The dissolved metals Magnesium (maximum of 36,800 ppb) and Selenium (maximum of 23 ppb) were detected in the groundwater at Site A at concentrations exceeding the GQS.

Metal concentrations distributed through groundwater at the Site are likely associated with the dissolved naturally-occurring mineral constituents from regional soil and/or historic fill material.

A summary table of data for chemical analyses performed on groundwater samples from Site B is included in **Tables 15, 16, 17 and 18**. **Figure 14** shows the location and posts the values for groundwater at Site B that exceeds the GQS. Groundwater samples collected during the RI showed no VOCs, SVOCs, pesticides or PCBs are present in the groundwater at Site B at concentrations exceeding the GQS. PCE and TCE were not detected in the groundwater sample. Six (6) metals (Barium, Chromium, Copper, Lead, Manganese and Nickel) were detected in unfiltered groundwater sample at concentrations above their respective GQS. No dissolved metals were detected in the groundwater at Site B at concentrations exceeding the GQS.

5.4 Soil Vapor Chemistry

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Sites. A summary table of data for chemical analyses performed on soil vapor samples from Site A is included in **Table 10**. **Figure 15** shows the location and posts the values for soil vapor samples from Site A with detected concentrations exceeding the Soil vapor

analytical results were compared to New York State Department of Health (NYSDOH) Final Guidance on Soil Vapor Intrusion (October 2006) Matrices 1 and 2.. Soil vapor samples collected during the RI showed the presence of petroleum and chlorinated VOCs in the soil vapors beneath the Site. The concentrations of the detected VOCs are generally below 100 ug/m³, with the exception of Acetone (maximum of 800 ug/m³), a common laboratory contaminant. 1,1,1 Trichloroethane and Carbon Tetrachloride were not detected in any of the soil vapor samples. PCE was detected in all three soil vapor samples at concentrations below the NYSDOH Matrix guidance value (maximum of 23 ug/m³). TCE was detected in one soil vapor sample at 46 ug/m³, which exceeds the NYSDOH Matrix guidance value of 5 ug/m³.

A summary table of data for chemical analyses performed on soil vapor samples from Site B is included in **Table 19**. **Figure 16** shows the location and posts the values for soil vapor samples from Site B with detected concentrations exceeding the Soil vapor analytical results were compared to NYSDOH Final Guidance on Soil Vapor Intrusion (October 2006) Matrices 1 and 2. Soil vapor samples collected during the RI showed the presence of petroleum and chlorinated VOCs in the soil vapors beneath the Site. The concentrations of the detected VOCs are generally below 100 ug/m³, with the exception of Acetone (maximum of 1,300 ug/m³) and Methylene Chloride (maximum of 250 ug/m³), both common laboratory contaminants. 1,1,1 Trichloroethane and Carbon Tetrachloride were not detected in any of the soil vapor samples. PCE (maximum of 68 ug/m³) was detected in the four of the five soil vapor samples at concentrations below the NYSDOH Matrix guidance value at Site B. TCE was not detected in any of the soil vapor samples from Site B.

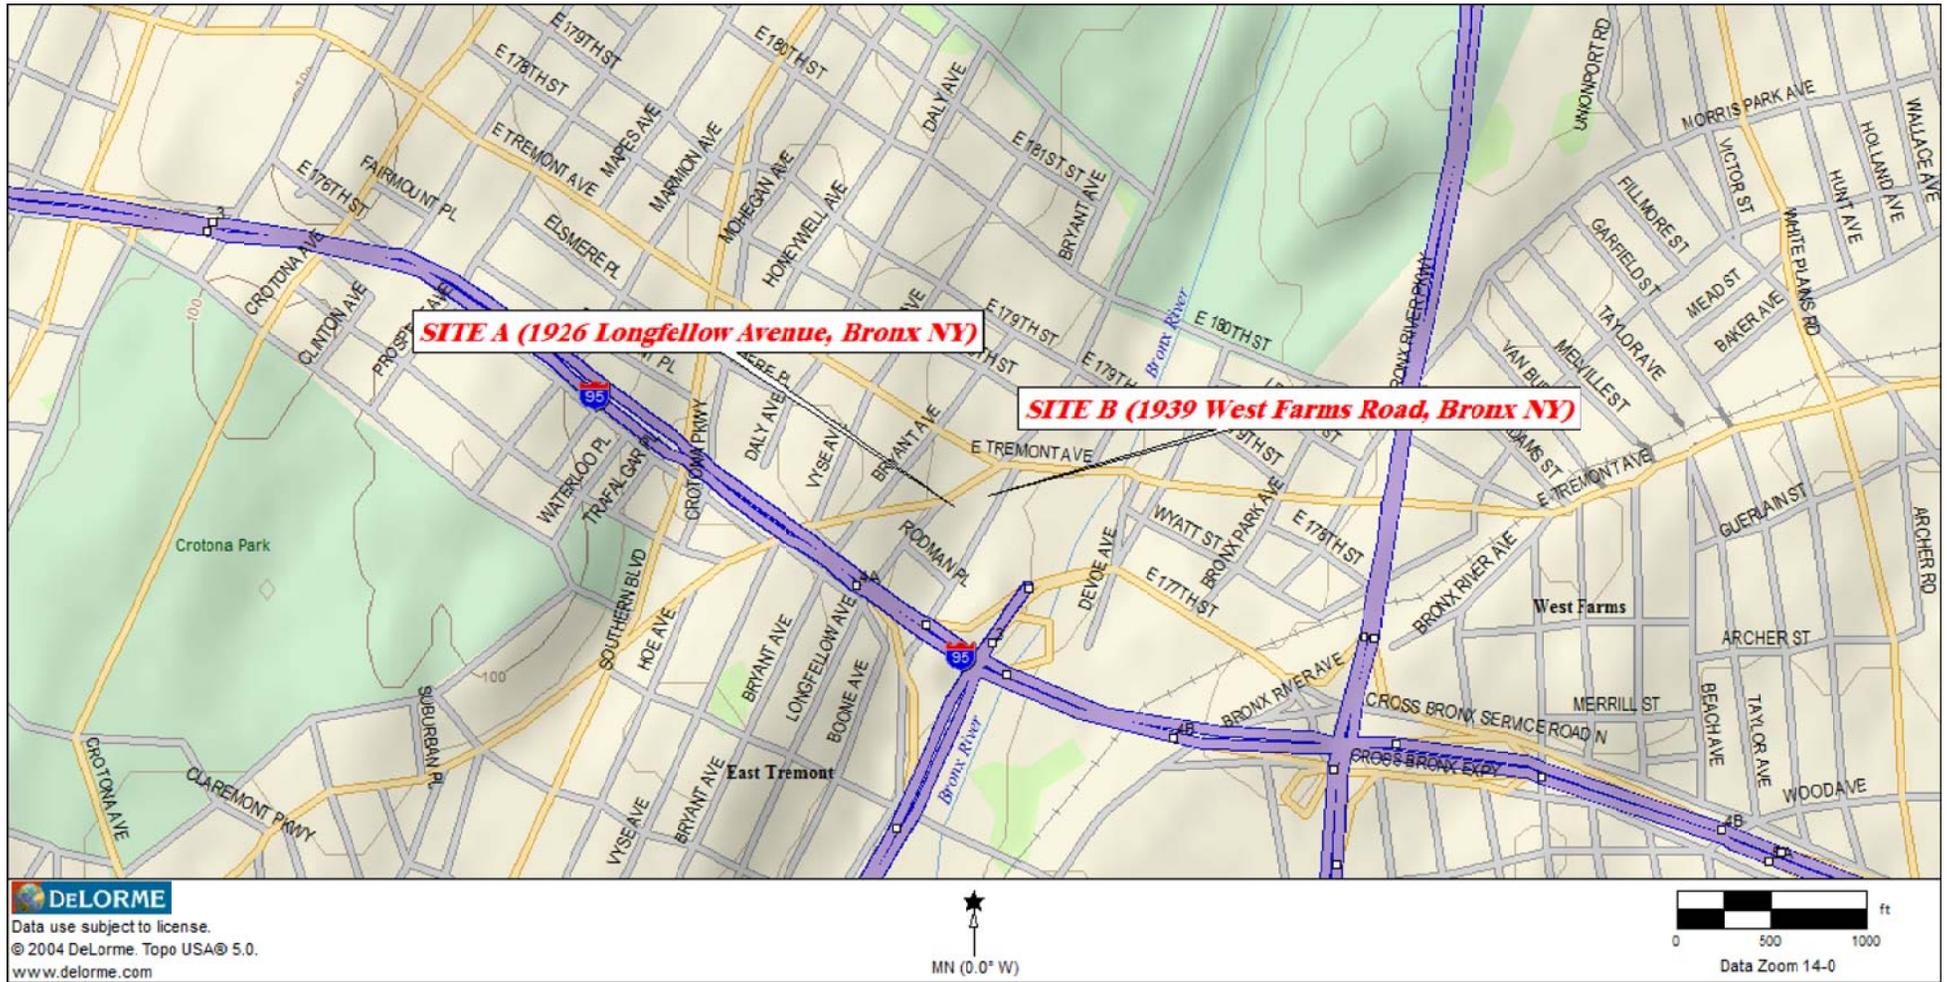

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

NOTES:

Gray shading indicates exceedance of Unrestricted SCO

Less than sign indicates analyte not detected at or above the level indicated

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

D=result is from an analysis that required a dilution

E=result is estimated and cannot be accurately reported due to levels encountered or interferences

NT=this indicates the analyte was not a target for this sample

NS=this indicates that no regulatory limit has been established for this analyte

NOTES:
Gray shading indicates exceedance of Unrestricted SCO
Blue shading indicates exceedance of Restricted Residential SCO

Less than sign indicates analyte not detected at or above the level indicated
J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
D=result is from an analysis that required a dilution
NT=this indicates the analyte was not a target for this sample
NS=this indicates that no regulatory limit has been established for this analyte

NOTES:

Gray shading indicates exceedance of regulatory standard

Less than sign indicates analyte not detected at or above the level indicated

J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated

NS =this indicates that no regulatory limit has been established for this analyte

NOTES:
 Gray shading indicates exceedance of Unrestricted SCO

U=analyte not detected at or above the level indicated
 J=analyte detected at or above the MDL (method detection limit) but below the RL (Reporting Limit) - data is estimated
 D=result is from an analysis that required a dilution
 NS=this indicates that no regulatory limit has been established for this analyte

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was performed in accordance with ASTM E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The Phase I ESA was performed by Mr. Matthew Carroll, of Tenen Environmental, LLC (Tenen), an Environmental Professional as defined in 40 CFR 312. The Site reconnaissance was conducted by Mr. Matthew Carroll on March 28, 2013.

The Site, located in the Bronx, New York, consists of two (2) lots. The tax map designation of the property is Block 3016, Lots 42 and 38. Lot 42 (1939 West Farms Road) is a roughly triangular-shaped parcel of 32,240 square feet bounded by Boston Road and West Farms Road. Lot 38 (1926 Longfellow Avenue) is a 6,678-square foot parcel adjoining Lot 42 to the southwest and fronting Longfellow Avenue. The property is currently improved with a hotel with rear parking, an asphalt-paved parking area and a vacant area covered with demolition debris.

The Site was developed as early as 1868, but with unknown uses. Historic maps dated 1885 through 1896 show the Site as developed with a group of six buildings labeled “carriage house”. By 1901, a wagon factory with several buildings is shown on the eastern portion and an additional building is present on the western part of the property. The 1915 map shows the Site as vacant except for two small buildings. By 1926, a two-story entertainment complex, including a lobby and 2,700-person capacity theater with a stage and dressing rooms, and a second floor dance palace, was constructed on the Site. In later years, the buildings also contained commercial spaces, offices, a motor freight operation, an auto repair shop, an awning manufacturer, a brush manufacturer and a pizzeria. The southwest portion was used as a parking area and a rear yard for the repair shop and auto service on the south adjacent property (1931 West Farms Road). Based on the 2011 C of O, a hotel was constructed around this time, which would have required the demolition of the former Site buildings.

Similar to the Site, adjacent and surrounding properties were predominantly developed by 1868. Part of the Bronx River was present on the southern part of the east adjacent property until approximately 1951, at which time the course was rerouted and this portion was filled in. Pertinent historic uses of adjacent properties include: a tannery, a fire engine house, a carriage house, a portion of “The Bronx Co. Bleaching, Dyeing and Printing Wks.” (including a print shop, a bleach house, a starch & dry house, a dye house, a drying room, an office, boilers and an engine room), a paint shop, an auto house, a roofer, an undertaker, laundries, auto repair shops, a rail yard, dry cleaners, and a bowling alley. Gasoline tanks, solvent tanks and filling stations are shown on adjacent properties. The nature of the surrounding area is similar to that of the Site and adjacent lots, with the earliest maps showing development with some residential and a variety of commercial and manufacturing uses.

Regarding the Site, adjacent and surrounding properties, the results of the Sanborn map, city directory, historic topographic map and aerial photograph reviews are consistent with commercial and industrial uses. The historic uses at the Site and adjoining and surrounding properties likely involved the use and disposal of hazardous materials, including solvents and petroleum products. Based on the widespread and long-term uses of these materials, it is likely that a release has occurred.

The regulatory database review shows there were several releases in the area, including reference to area-wide groundwater impacts, which is indicative of historic commercial and industrial uses in the area.

Both lots were included in the New York City Department of City Planning (NYCDCP) Crotona Park East Rezoning (CEQR #10DCP017X). The rezoning placed e-designations on the property for hazardous materials, air quality (fuel type and setback) and noise (42 dBA).

Tenen has performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM E 1527-05 1926 Longfellow Avenue and 1939 West Farms Road in the Bronx, New York (the Property). Any exceptions to, or deletions or deviations from, this practice are described in Section 1.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, with the exception of the following:

- Historic commercial and industrial uses of the Site, adjacent and surrounding properties.

1.0 INTRODUCTION

1.1 Site Description

The Site, located in the Bronx, New York, consists of two (2) lots. The tax map designation of the property is Block 3016, Lots 42 and 38. Lot 42 (1939 West Farms Road) is a roughly triangular-shaped parcel of 32,240 square feet, extending approximately 197 feet along the west side of West Farms Road and approximately 255 feet along the east side of Boston Road. Lot 38 is a square parcel adjoining Lot 42 to the southwest, with approximately 86 feet of frontage extending along Longfellow Avenue and an area of approximately 6,678 square feet. The original Site address was 1922 Boston Road. The current Site addresses were recently issued by the Office of the Bronx Borough President. Other addresses associated with the Site are 1900-1944 Boston Road.

The property is currently improved with a hotel with rear parking, an asphalt-paved parking area and a vacant area covered with demolition debris. The hotel is in the southwest corner of Lot 42 and fronts Boston Road, the parking area comprises all of Lot 38 and fronts Longfellow Avenue, and the vacant area is the remaining portion of Lot 42 and fronts both Boston Road and West Farms Road.

Both lots are zoned residential (R8X) with a commercial (C2-4) overlay and were included in the NYCDP Crotona Park East Rezoning (CEQR #10DCP017X). The rezoning placed e-designations on the property for hazardous materials, air quality (fuel type and setback) and noise (42 dBA).

A Site location figure is included in Appendix A and photographs from the Site reconnaissance are included in Appendix B.

1.2 Scope of Services

This Phase I Environmental Site Assessment (ESA) was performed in accordance with ASTM E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The purpose of this ESA was to assist the client in developing information to identify recognized environmental conditions (RECs) in connection with the Site. This was undertaken through user-provided information; a regulatory database review; historical and physical records review; interviews; and a visual non-invasive reconnaissance of the Site and adjoining properties. Limitations, ASTM deviations, and significant data gaps are evident from reviewing the applicable scope of services and the report text.

1.3 Standard of Care

This ESA was performed in accordance with ASTM E1527-05 and generally accepted practices used in similar studies at the same time and in the same geographical area. We have endeavored to meet this standard of care, but may be limited by conditions encountered during performance, a client-driven scope of work, or inability to review information not received by the report date. Where appropriate, these limitations are discussed in the text of the report, and an evaluation of their significance with respect to our findings has been conducted.

Phase I ESAs, such as the one performed at this Site, are of limited scope, are noninvasive and cannot eliminate the potential that hazardous, toxic, or petroleum substances are present or have been released at the Site beyond what is identified by the limited scope of this ESA. In conducting the limited scope of services described herein, certain sources of information and public records, some of which may document environmental concerns, were not reviewed. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property and the performance of a Phase I ESA is

intended to reduce, but not eliminate, uncertainty regarding the potential for RECs. No warranties, express or implied, are intended or made. The limitations herein must be considered when the user of this report formulates opinions as to risks associated with the Site or otherwise uses the report for any other purpose. These risks may be further evaluated – but not eliminated – through additional research or assessment.

1.4 Additional Scope Limitations, ASTM Deviations and Significant Data Gaps

This ESA did not include subsurface or other invasive assessments, business environmental risk evaluations or other services not particularly identified and discussed herein. Reasonable attempts were made to obtain information within the scope and time constraints; however, in some instances, information requested is not, or was not, received by the issuance date of the report. Information obtained for this ESA was received from several sources that we believe to be reliable; nonetheless, the authenticity or reliability of these sources cannot and is not warranted hereunder.

No significant data gaps were identified in the performance of this Phase I ESA. The first developed use of the property is unknown. Based on historical research, the property was developed, with an unknown use, since at least 1868 (Beers West Farms Atlas). This data gap is not considered to be significant based on the amount of historical information about the existing building.

The significance of these limitations and missing information, if any, with respect to the findings of this Phase I ESA has been evaluated and it has been determined that no significant data gap is present. However, it should be recognized that an evaluation of the significance of these data gaps is based on the information available at the time of report issuance and an evaluation of information received after the report issuance date may result in revisions to the findings of this Phase I ESA.

This report represents the final document; its text may not be altered after final issuance. Findings in this report are based upon the Site's current utilization, information derived from the most recent reconnaissance and from other activities described herein; such information is subject to change. Certain indicators of the presence of hazardous substances or petroleum products may have been latent, inaccessible, unobservable, or not present during the most recent reconnaissance and may subsequently become observable (such as after Site renovation or development). Further, the contents of this Phase I ESA are not to be construed as legal interpretation or advice.

1.5 Reliance

This Phase I ESA report is prepared for the exclusive use and reliance of Shri Sainath LLC. Use or reliance by any other party is prohibited without the written authorization of the above entities. The User has requested this Phase I ESA as part of due diligence associated with a rezoning action.

Continued viability of this report is subject to ASTM E1527-05 Sections 4.6 and 4.8. If the ESA will be used by a different user (third party) than the user for whom the ESA was originally prepared, the third party must also satisfy the user's responsibilities in Section 6 of ASTM E1527-05.

1.6 Client-Provided Information

Mr. Pankajkumar P. Shah of Shri Sainath LLC completed a Phase I ESA User Questionnaire to provide the following information relative to the site. A copy of the completed User Questionnaire is provided in Appendix E.

1.6.1 Knowledge of Environmental Liens or Activity and Use Limitations (AULs)

The User is not aware of any environmental liens or AULs filed or recorded under federal, state, or local law.

1.6.2 Specialized Knowledge or Experience

The User does not have any specialized knowledge or experience related to the Site or nearby properties, such as knowledge of the chemicals or processes used by the current or former occupants of the Site or any adjoining property, with the exception of the use of the property as a theater, carriage factory, auto repair shop, multi-dwelling and parking lot.

1.6.3 Significantly Lower Purchase Price

Based on information obtained from the User, the Site is not being sold at this time.

1.6.4 Commonly Known or Reasonably Ascertainable Information

The User is not aware of any commonly known or reasonably ascertainable information about the Site that may help to identify conditions indicative of releases or threatened releases

1.6.5 Obvious Indicators

The User is not aware of any obvious indicators that point to the presence or likely presence of contamination at the Site

1.6.6 Proceedings Involving the Site

The User is not aware of any pending, threatened, or past environmental litigation, proceedings, or notices of possible violations of environmental laws or liability in connection with the Site.

2.0 PHYSICAL SETTING

According to the Central Park, New York Quadrangle USGS Topographic Map (2013), included as Figure 1 in Appendix A, the property lies at between elevations of approximately 20 and 30 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The surface topography at the Site and surrounding area slopes downward to the east, toward the Bronx River.

Groundwater is assumed to be within 20 to 30 feet of the ground surface. Groundwater flow is assumed to be to be locally east, toward the Bronx River. Groundwater is not used as a source of potable water in this area of the Bronx.

The Federal Emergency Management Agency (FEMA) flood insurance rate map for the Site (Map Number 3604970084F) indicates that the Site is located in Zone X, outside of the 0.2% annual chance floodplain (500 year flood).

3.0 HISTORICAL USE INFORMATION

The following historical sources were reviewed: Sanborn fire insurance maps, aerial photographs, topographic maps and city directories. Copies of these resources are included in Appendix C. Additionally, records from New York City agencies were reviewed and copies of these documents are included in Appendix E. A summary of the historical review is included in Section 3.9.

3.1 Sanborn Fire Insurance Maps

Maps were available for the following years: 1896, 1898, 1901, 1903, 1915, 1919, 1928, 1950, 1969, 1977, 1978, 1979, 1980, 1981, 1983, 1984, 1985, 1986, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006, and 2007. Information obtained from the Sanborn map review is provided below.

Sanborn Fire Insurance Maps

Map Date	Location Covered	Description
1896	Site	The property appears to be parceled into eight lots, one of which appears vacant. The lot to the southeast is a carriage factory with several one- and two-story buildings. The remaining lots are shown with one- and two-story buildings of unknown uses. The buildings along West Farm Road are shown as extending into the roadway.
	Adjacent	The southern-adjacent properties include a large one-story building labeled as vacant, along West Farms Road, and a one- and two-story building of unknown use along Longfellow Street. The property across Longfellow Street, to the west, is shown as a one- and two-story building of unknown use. The property across Boston Road to the northwest includes thirteen one- and two-story buildings of unknown use; Lillian Place bisects the property. The properties to the north and northeast, across the intersection of Boston Road and Tremont Avenue, include many one- and two-story buildings of unknown use, one of which has a carriage house. The property to the east includes several one- and two-story buildings of unknown use fronting West Farms Road and Tremont Avenue and a portion of "The Bronx Co. Bleaching, Dyeing and Printing Wks." The portion on the adjacent property includes a print shop, a bleach house, a starch & dry house, a dye house, a drying room, an office and some buildings of illegible or unknown use. The southern portion of the eastern-adjacent property appears to be part of the Bronx River.
	Surrounding	The surrounding area is developed with a mixture of commercial and manufacturing to the south and what is likely residential to the west, north and northeast, based on the presence of a grammar school and two churches. The area to the east, across the Bronx River, appears to be predominantly vacant.

Map Date	Location Covered	Description
1901	Site	The site is parceled into five lots, two of which are vacant (including the northern-most area). A wagon factory with several one- and two-story buildings is present on the eastern portion of the property. A one-story building of unknown use is present on the western portion of the property.
	Adjacent	The southern-adjacent properties are shown as vacant along West Farms Road and a one- and two-story building of unknown use along Longfellow Street. The property to the west, across Longfellow Street, is used as a hay store. The property across Boston Road to the west includes several one- and two-story buildings of unknown use and a hotel; the property remains bisected by a street (Division Street, formerly Lillian Place). The properties to the north and northeast appear to be similar to the 1896 map, with the exception of one property fronting the current East 178 th Street that is labeled as a paint shop. The properties to the east are also similar to the 1896 map, the factory buildings on the adjacent property are shown as a print shop, a color room, a jig room, an office, a carpenters shop, drying rooms, a dye room or are unlabeled; one building along West Farms Road is shown as a mission.
	Surrounding	There is increased development with two (2)-story buildings to the northeast, and a paint shop is shown north of the Site along Boston Road. Several additional structures are shown to the south, south of Rodman Place. The area along the Bronx River has been divided into smaller lots, which are occupied by several additional commercial operations. Additional structures are also shown along Longfellow Street, to the south
1903	Site, Adjacent, Surrounding	There are no site-specific uses shown on this map.
1915	Property	The site is shown as vacant with the exception of a small one-story building of unknown use on the northern portion of the property. A small structure of unknown use is shown within West Farms Road but abutting the eastern border of the site.

Map Date	Location Covered	Description
	Adjacent	<p>The southern-adjacent properties are shown as vacant, as is the property to the west across Longfellow Street. The western-adjacent properties across Boston Road are shown as one- and two-story residential and/or commercial buildings with the following uses noted: auto house, roofer, restaurant and vacant. The bisecting roadway is not mapped and is shown as vacant. The northwestern-adjacent properties are more developed, predominantly with one-, two- and three-story residential and/or commercial buildings with the following uses noted: "chine. laundry," office, drugs (presumably a drugstore), confectioner, bakery, livery, undertaker. Several sheds and gardens are shown behind the buildings. The northeastern-adjacent properties are developed with two- and three-story residential and/or commercial buildings with the following uses noted: paints, "chine. laundry," confectioner and a repair shop. The northern portion of this northern-adjacent property is the Boston Road Yard railroad yard, built in 1909, for the Interboro Rapid Transit Company (IRT). The rail yard includes several buildings, including an inspection shed. An IRT station, with elevated tracks above Boston Road, is shown north of the site. The eastern-adjacent property includes one- and two-story residential and/or commercial buildings along West Farms Road and Tremont Avenue with the following uses noted: furrier, coop, offices and a post office. The Bronx Company appears to have expanded, with the following uses noted on the eastern-adjointing property: printing, bleaching & sewing, dyeing, a drying room, boilers, an engine room and offices.</p>
	Surrounding	<p>The surrounding area is developed with several residential and/or commercial and institutional uses. The formerly vacant lot south of the Site block is depicted as a plant nursery. The formerly vacant area on the opposite side of the Bronx River is shown as a finisher of cotton goods.</p>
1950	Site	<p>The majority of the site is used as a two-story entertainment complex built in 1926. The site includes first-floor stores along Boston Road with a dance palace on the second floor, a lobby and a 2,700-person capacity theater with a stage and dressing rooms. The northernmost area appears to be used as a commercial space and offices. A rear yard is present in the center of the site. The southwestern portion of the site is vacant but labeled as the rear yard for 1931 West Farms Road, which is used as a repair shop and auto service.</p>

Map Date	Location Covered	Description
	Adjacent	The southern-adjacent properties include a vacant area fronting Longfellow Avenue (formerly Longfellow Street) and a repair shop / auto service, including two gasoline tanks and an office, fronting West Farms Road. The western-adjacent property, across Longfellow Avenue, is a filling station with a small building. The western-adjacent properties, across Boston Road, include several single- and multiple-family dwellings, some of which also have commercial uses, as well as a filling station with a small building, a parking area and a mattress manufacturer. The northwestern-adjacent properties appear developed with one- and two-story residential and/or commercial buildings with the following uses noted: meeting rooms, undertaker, drugs (presumably a drugstore), billiards and a dance hall (please note that a portion of the map appears to be copied incorrectly). The northeast-adjacent properties include several commercial and manufacturing uses; the rail yards, now operated by New York City Transit, appear smaller than those shown on the 1915 map and the following uses are noted: a filling station (under the overhead trestle, which remains), a club, furniture and upholstery stores, unspecified manufacturing and several auto houses. The eastern-adjacent property is shown as vacant with the exception of some buildings nearer to Tremont Avenue, including a dry cleaner with a solvent tank, offices, a photography store and a bowling alley.
	Surrounding	The surrounding area is similar to the 1915 map, with a mixture of residential and/or commercial and institutional uses. The formerly occupied lots south of the school one block west of the Site are vacant and used as a playground and the former plant nursery to the south on the south side of Rodman Place is shown as a garage/auto repair shop with two (2) 550-gallon gasoline tanks. The former cotton finishing operation across the Bronx River is not shown.
1977, 1978	Site	No changes from the 1950 map, with the exception of a school being operated on the second floor of the western portion fronting Boston Road in the 1977 map (the 1978 map only notes a commercial space on the first floor) and a motor freight station operating in the seating area of the theater, along West Farms Road.
	Adjacent	No changes to the western property across Longfellow Avenue. The southern-adjacent properties include a contractor's equipment service yard and repair shop (associated with the vacant southwestern portion of the site) fronting West Farms Road and storage fronting Longfellow Avenue. The western-adjacent property across Boston Road is developed with a five-story, open-deck parking garage and a one-story commercial space fronting Tremont Avenue. The northwestern-adjacent property is developed with a one- and 21-story residential building with a community center and associated parking lot. The northeastern-adjacent property is used as a shopping center with associated parking decks and a warehouse. A public school (I.S. 167) is present on the eastern-adjacent property. The course of the Bronx River has been altered and it is no longer on the eastern-adjacent property.

Map Date	Location Covered	Description
	Surrounding	The surrounding area to the south and west is a mixture of residential and/or commercial spaces, while the other areas are predominantly developed with large apartment buildings and stores. A dry cleaning operation is shown south of the Site on the north side of the Cross Bronx Expressway service road.
1979, 1980, 1981, 1983, 1984, 1985, 1986, 1989, 1991, 1992, 1993	Site, Adjacent, Surrounding	No change from 1978 map.
1994, 1995, 1996, 1998	Site	Similar to prior maps. The open lot on the site, to the southwest, is shown as being used for parking in the 1994 and subsequent maps.
	Adjacent	No change from 1978 map.
	Surrounding	Similar to 1978 map.
2001, 2002, 2003, 2004	Site, Adjacent, Surrounding	No change from prior maps
2005	Site	An auto repair operation is shown on the Site, north of the stage area and bordering West Farms Road.
	Adjacent	No change from prior maps.
	Surrounding	Similar to prior maps.
2006, 2007	Site	No change from 2005 map.
	Adjacent	No change from 2005 map
	Surrounding	Similar to prior maps.

The review of the historic Sanborn maps indicates that commercial and industrial uses were present at the Site, adjacent and surrounding properties, which are considered a REC.

3.2 Historical Maps

Tenen reviewed the historical maps from 1868, 1873, 1874, 1885, 1888, 1889, 1893, 1895, 1896, 1897, 1901, 1918, 1921, 1924, 1956 and 1979. The results of the map review are summarized below. In some instances, the maps did not provide property-specific information or did not add pertinent information; these maps are not included.

Historical Maps

Map Date	Location Covered	Description
1868	Site	Site-specific information is not shown.
	Adjacent	Adjacent properties are developed with buildings of unknown use. The eastern-adjacent property, across West Farms Road, appears to be developed with several large buildings.
	Surrounding	The surrounding area is developed with buildings of unknown use.
1873	Site	The Site is developed with several buildings of unknown use.
	Adjacent	The adjacent properties are developed; however, no uses are noted. The eastern-adjacent property is developed with several large buildings.

Map Date	Location Covered	Description
	Surrounding	The surrounding area is developed with buildings of unknown use.
1885	Site	The Site is developed with several buildings including a group of six buildings that are labeled "carriage parts".
	Adjacent	The adjacent properties are developed; however, the only uses noted are a fire engine house to the southwest and a tannery to the east.
	Surrounding	The surrounding area is mostly developed with building of unknown uses.
1888	Site	The Site is developed with several stores and buildings of unknown uses; the northern portion is labeled as "Charles Berrians Land."
	Adjacent	The adjacent properties are developed with the following uses noted: store (west), church (southeast), mansion (east), garden (east), drug store (east), garden (east), carpet factory (east) and mill (east).
	Surrounding	The surrounding area is mostly developed with buildings of unknown uses; however, a carpet factory, bakery, smith and some other commercial uses are shown.
1893	Site	The Site is divided into four lots, two with buildings of unknown use, one that appears vacant and a one used as a carriage factory.
	Adjacent	The adjacent properties are developed; however the only uses noted are a church to the southeast and the Bronx Bleachery to the east, where the tannery was formerly located.
	Surrounding	The surrounding area is developed with buildings of unknown uses, except for two churches to the north.
1896	Site	The Site is divided into several lots with one- and two-story buildings all of which are of unknown use except for a group along West Farms Road used as a carriage factory.
	Adjacent	Adjacent properties are developed with one- and two-story buildings of unknown use except a vacant building to the southeast and The Bronx Company (bleaching, dyeing and printing works) on a portion of the eastern-adjacent property, across West Farms Road.
	Surrounding	The surrounding area is developed with one- and two-story buildings, some with commercial and/or institutional use noted.
1901	Site	The majority of the Site does not have any buildings or use noted; however, there are three unlabeled buildings and one labeled as a wagon works.
	Adjacent	The adjacent properties are developed; however, the only specific uses noted are a firehouse, a blacksmith and The Bronx Company (bleaching and finishing).
	Surrounding	The surrounding area is developed similarly to the 1896 map.
1921	Site	The majority of the Site does not have any buildings or use noted; however, there are three unlabeled buildings along West Farms Road.
	Adjacent	The adjacent properties are developed; however, the only specific uses noted are Bronx Bleachery.
	Surrounding	The surrounding area is developed similarly to the 1896 map.

The review of the historic maps indicates that commercial and industrial uses were present at the Site, adjacent and surrounding properties; these historic uses are considered a REC.

3.3 Historical Photographs

Available historic aerial photographs were accessed via NYCityMap on March 1, 2013 for the following years: 1924, 1951, 1954, 1966, 1974, 1975, 1984, 1994, 1996, 2006, 2008 and 2010. In addition, tax lot photographs from the 1980's were also reviewed. The results of the photograph review are summarized below.

Historical Aerial Photographs

Photograph Date	Location Covered	Description
1924	Site	The northern portion of the Site is developed with one building of unknown use. The current parking lot appears to be developed; however, the photograph is not very clear.
	Adjacent	All adjacent properties appear to be developed, with the exception of the western-adjacent property across Longfellow Avenue; the rail yards on the northeastern-adjacent property and a factory on a portion of the eastern-adjacent property are the only identifiable uses. A rail line is present along Boston Road. The Bronx River is on a portion of the eastern-adjacent property.
	Surrounding	The majority of the surrounding area is developed with what appear to be residential buildings. An amusement park is present on the eastern side of the Bronx River.
1951	Site	The north portion of the Site is developed with a building fronting Boston Road and a larger building fronting West Farms Road, with a yard between the two buildings. The southwestern portion of the Site appears undeveloped.
	Adjacent	The adjacent properties are developed with buildings of unknown use; the majority of the eastern property appears under construction and the Bronx River course is being modified.
	Surrounding	The surrounding area is more fully developed; the majority of the properties appear to be residential, with some commercial/industrial uses along the Bronx River.
1954, 1966	Site	No apparent changes from the 1951 photograph.
	Adjacent	No apparent changes from the 1951 photograph with the exception of the eastern-adjacent property, which has been completely graded.
	Surrounding	No major changes from the 1951 photograph.
1974	Site	No apparent changes from the 1951 photograph.
	Adjacent	No apparent changes from the 1966 photograph with the exception of the following: western- and northeastern-adjacent properties have been developed with new buildings of unknown uses and the eastern-adjacent property has been developed with what appears to be the present-day school building.
	Surrounding	No major changes from the 1951 photograph.
1975, 1984, 1994, 1996, 2006, 2008, 2010	Site	No apparent changes from the 1951 photograph.
	Adjacent	No apparent changes from the 1966 photograph with the exception of the northwestern-adjacent property, which has been developed with what appears to be the present day parking lot associated with the housing complex.
	Surrounding	No major changes from the 1951 photograph.

Photograph Date	Location Covered	Description
1980 Tax Lot Photos	Site	The southwestern portion of the site is used as a parking area. The larger building fronting West Farms Road appears to be approximately seven stories, with no windows on the southern portion. There is a sign that reads "ALPS HOTEL MOTEL," which may or may not be indicative of the Site use.
	Adjacent	The southeastern-adjacent property is used as a marble store.

No RECs were identified based upon the review of historic aerial photographs. However, the aerial photographs are consistent with the presence of commercial and industrial uses at the site, adjacent and surrounding properties that are considered a REC.

3.4 City Directories

Available city directory listings were provided by EDR for the following years: 1927, 1931, 1940, 1949, 1956, 1961, 1965, 1971, 1983, 1993, 2000, 2005, 2007, and 2012.

Site. Addresses pertaining to the Site were listed in the city directories dated 1940, 1949, 1956, 1961, 1965, 1971, 1983, 1993, 2000, 2005, 2007 and 2012 and are described below.

1900 Boston Road: residential (1940), trucking company (1940)

1910 Boston Road: home improvement company (1940, 1949), aluminum awning company (1956), business school (1961), dental laboratory (1976)

1912 Boston Road: sales company (1940), uniform distributor (1961, 1965)

1914 Boston Road: brush manufacture (1949), typesetter (1956)

1918 Boston Road: printing company (1940, 1949, 1956, 1961, 1965, 1971)

1920 Boston Road: home improvement company (1956)

1922 Boston Road: hotel (1983, 1993, 2000, 2005, 2007, 2012), Shri Sainath LLC (2007), AAA Roadside Assistance (2012)

1924 Boston Road: surgical supply (1940, 1949, 1956, 1961, 1965)

1926 Boston Road: Collazi, Joseph, Art (1949)

1928 Boston Road: haberdasher (1956, 1961), dryer distributing corporation (1961), business machines (1971)

1930 Boston Road: Chester Palace (1940), ballroom (1949, 1956), business school (1965, 1971, 1976)

1934 Boston Road: antique shop (1949), television distribution ((1956), business school (1971), employment agency (1976), candy store (1979)

1936 Boston Road: pizzeria (1983)

1938 Boston Road: business school (1940, 1976), sportswear company (1983), nightclub (1993, 2000), Rico Mar BH (2005)

1942 Boston Road: confectionary (1940, 1949), luncheonette (1956, 1961), tavern (1971, 1976, 1983, 1993, 2000, 2005)

1944 Boston Road: auto accessories (1940, 1949, 1956, 1961, 1965), footwear (1983, 1993, 2000), store (1976)

Adjacent Properties. City directory listings for properties adjacent to the Site are primarily commercial and manufacturing. Listings for 1898 Boston Road, the western adjacent property across Longfellow Avenue, indicate use as a gasoline service station (1956, 1961, 1965, 1971, 1983, 1993), auto repair (2005), construction (2005), and boiler repair (2005). Additional uses of adjacent and surrounding properties include painting (1927), marble/tile company (1983, 1993, 2000, 2005, 2007, 2012), garage (1940), tinsmith (1940, 1949), tavern (1956, 1961, 1965, 1971), service station (1940, 1949, 1956, 1961), auto repair (1971), photographer (1927, 1940), real estate companies (1927, 1940, 1961), dentist/dental laboratory (1927, 1940, 1961), social clubs (1961, 1965), stationary store (1927, 1940, 1961), lighting company (1961), check cashing (1971), auto supply store (1965, 1971), professional offices (1927, 1961, 1965), building contractors (1927, 1961, 1965), grocer (1927), butcher (1972), appliance company (1949), and employment agency (1961, 1965).

The review of the city directories indicates the presence of commercial and industrial uses at the Site and adjacent properties; these historic uses are considered a REC.

3.5 New York City Department of Buildings

Available information from the New York City Department of Buildings (NYCDOB) Building Information System (BIS) was reviewed. Certificates of occupancy (C of Os) were available for 1936 Boston Road (a.k.a. 1963 West Farms Road) and are discussed below. The referenced certificates of occupancy are included in Appendix E.

Certificates of Occupancy

A certificate of occupancy dated 10/69 references a two (2)-story building with cellar; boiler room/storage in cellar, retail stores and freight consolidation on the first floor and second floor (unoccupied) offices and classrooms. Later C of Os (8/2/78, 10/26/83, 2/28/91) list a boiler room/storage in cellar; first floor freight consolidation depot, retail stores and hotel; second floor offices and hotel; 13 accessory parking spaces. The 1991 C of Os also reference a second floor banquet hall. Temporary C of Os dated 12/23/10, 3/29/11 and 6/22/11 and the final C of O dated 8/15/11 reference a cellar (hotel, boiler room, offices), a hotel on the first and second floors and 1200 square feet of open space used for parking for four (4) cars.

Additional information (job filings, violations) available from DOB was also reviewed. No RECs were identified based on a review of DOB information.

3.6 Title Search

Tenen reviewed the title information provided by the User and documentation (deeds and easements) available from NYC ACRIS. This information does not indicate the presence of a REC.

3.7 Environmental Liens/Activity and Use Limitations

As detailed in Section 1.6.1, the User is not aware of any environmental liens or activity and use limitations.

3.8 Historical Interviews

The User requested information from the owner of the Site, including information listed in the interviews section and list of helpful documents included in ASTM 1527-05. The User completed a User Questionnaire and any additional information provided from the User is included in this Phase I ESA where appropriate.

3.9 Historical Use Information Summary

Site. The earliest historical sources (maps dated 1868 through 1896) depict the Site property as already developed. Historic maps dated 1885 through 1896 show the Site as developed with a group of six buildings labeled “carriage house”. By 1901, a wagon factory with several buildings is shown on the eastern portion and an additional building is present on the western part of the property. The 1915 map shows the Site as vacant except for two small buildings. In 1926, a two-story entertainment complex, including a lobby and 2,700-person capacity theater with a stage and dressing rooms, and a second floor dance palace, was constructed on the Site. These features are depicted on a 1950 map, which also shows commercial space and offices on the northernmost part of the Site, and first floor stores along Boston Road. The vacant southwest portion is a rear yard for the repair shop and auto service on the south adjacent property (1931 West Farms Road). With the exception of school operations on the second floor of the properties fronting Boston Road, and the addition of a motor freight station in the prior seating area of the theater, there were relatively few changes to the Site between 1950 and 1977, the date of the next available map. Site operations remained unchanged through 2005, when an auto repair shop is depicted north of the former stage area, along West Farms Road. This operation is shown through 2007, the date of the most recent map. Based on the 2011 C of O, a hotel was constructed around this time, which would have required the demolition of the former Site buildings.

Adjoining and Surrounding Properties. Similar to the Site, the earliest maps show the adjacent and surrounding properties as already developed with a variety of uses, with the adjacent properties developed as early as 1868. The 1885 map shows a tannery to the east and a fire engine house to the southwest. The 1896 map shows the south adjacent lots as being occupied by a large one-story building labeled as vacant, along West Farms Road, and a one- and two-story building along Longfellow Street. The property across Longfellow Avenue, to the west, contains a one- and two-story building of unknown use. The property across Boston Road to the northwest includes thirteen one- and two-story buildings of unknown use. The properties to the north and northeast, across the intersection of Boston Road and Tremont Avenue, include many one- and two-story buildings, including a carriage house. The east adjacent property includes several one- and two-story buildings fronting West Farms Road and Tremont Avenue and a portion of “The Bronx Co. Bleaching, Dyeing and Printing Wks.” replacing the former tannery. The western portion of the east adjacent property includes a print shop, a bleach house, a starch & dry house, a dye house, a drying room, an office and some buildings of illegible or unknown use. Part of the Bronx River is shown on the southern part of the east adjacent property. Uses of most adjacent properties remained relatively constant through 1901, when a paint shop is shown on East 178th Street. By 1915, the properties to the west along Boston Road include both residential and commercial buildings, with the latter housing an auto house and roofer. Commercial uses to the northwest include a drugstore, confectionary, bakery, livery and undertaker and those to the northeast include a laundry, confectioner and repair shop. An IRT rail yard, constructed in 1909, occupies the northern part of the north adjacent property, and an IRT station, with elevated tracks, is shown north of the Site as early as 1901. Operations

on the east adjacent property have expanded to include printing, bleaching and sewing, dyeing, a drying room, boilers, an engine room and offices. Sometime prior to 1950, several of the adjacent properties were developed with auto-related uses. The map shows an auto repair shop, with two (2) 550-gallon gasoline tanks to the south, fronting West Farms Road; as well as two (2) filling stations to the west, one along Longfellow Avenue, and the second along Boston Road. An additional filling station is shown to the north below the overhead trestle and the overall rail yard operation appears to be smaller than that shown in 1915. The prior dye and textile operations on the east adjacent property are not shown; that property is vacant except for several buildings near Tremont Avenue, occupied by a dry cleaner with a solvent tank, a photography store, and a bowling alley. Sometime prior to 1977, the northwestern adjacent property was developed with a large residential building, with a community center and parking lot, and a shopping center, parking decks and warehouse was constructed to the northeast. A public school is shown on the east adjacent property and the course of the Bronx River has been altered, with the river no longer flowing through that lot. The south adjacent lot is shown with a contractor's equipment service yard and repair shop fronting West Farms Road and storage along Longfellow Avenue. No significant changes to the adjacent properties are shown through 2007. The nature of the surrounding area is similar to that of the Site and adjacent lots, with the earliest maps showing development with some residential and a variety of commercial and manufacturing uses. The latter include a cotton finishing operation to the southeast across the Bronx River and a plant nursery to the south. By 1950, several churches and a school are also shown, and an auto repair shop with two (2) gasoline tanks occupies a property to the south, along Rodman Place. By 1978, a dry cleaning operation is shown south of the Site. The nature of the area remains relatively unchanged, with increased residential and commercial development to the south and west.

Regarding the Site, adjacent and surrounding properties, the results of the Sanborn map, city directory, historic topographic map and aerial photograph reviews are consistent with commercial and industrial uses. The historic uses at the Site and adjoining and surrounding properties likely involved the use and disposal of hazardous materials, including solvents and petroleum products. Based on the widespread and long-term uses of these materials, it is likely that a release has occurred and therefore, these uses are considered to be a REC.

4.0 RECORDS REVIEW

Database information was provided by Environmental Data Resources (EDR) on April 4, 2013. Several available federal and state databases were searched using standard radii, as detailed in ASTM 1527-05. The database search report, including definitions and descriptions, is included in Appendix D.

4.1 Federal, State/Tribal and Proprietary Databases

The Property was not listed on any of the databases reviewed

Records for surrounding properties show that multiple properties within the standard search radii are listed in the LTANKS, HIST LTANKS and NY Spills and NY Historic Spills, and NY/NJ manifest databases, and multiple nearby sites have registered storage tanks. Each of these categories is detailed below. The following databases contain sites within the standard search radii.

Summary of Databases with Identified Sites

Database	Description	Radius	Facilities
RCRA-SQG	RCRAInfo is USEPA's information system on sites that generate, transport, store treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month.	0.25 mi	1
RCRA CESQG	RCRAInfo is USEPA's information system on sites that generate, transport, store treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). The RCRA-CESQG database includes conditionally-exempt small quantity generators (CESQGs) which generate less than 100 kilograms (kg) of hazardous waste or less than 1 kg of acutely hazardous waste, per month.	0.25 mi	3
SWF/LF	The SWF/LF database typically contains an inventory of solid waste disposal facilities or landfills.	0.5 mi	1
NY UST / NY AST	The NY UST and NY AST databases include site with registered USTs or ASTs, respectively.	0.25 mi	9 (UST) 25 (AST)
HIST UST	The HIST UST database is based on information in the NYSDEC PBS database and contains registered USTs prior to 2002; current data is included on the NY UST database	0.25 mi	7
NY LTANKS	The NY LTANKS database includes an inventory of reported leaking storage tank incidents from April 1, 1986 through present	0.5 mi	22
HIST UST	The HIST UST database is based on information in the NYSDEC PBS database and contains registered USTs prior to 2002; current data is included on the NY UST database	0.25mi	10
NY SPILLS	The NY Spills database includes data on spills reported to the New York State Department of Environmental Conservation (NYSDEC).	0.125mi	13
NY HIST SPILLS	The NY HIST SPILLS database includes spills reported to NYSDEC prior to 2002; spills reported since that date are included in the NY SPILLS database	0.125mi	6

Database	Description	Radius	Facilities
NYHIST LTANKS	The NY HIST LTANKS database includes an inventory of reported leaking storage tank incidents prior to 2002; current data is included on the NY LTANKS database.	0.5 mi	21
TANKS	The TANKS database contains records of facilities that are or have been regulated under the Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.	0.25 mi	3
CBS	CBS facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.	1.0 mi	1
BROWNFIELDS	The BROWNFIELDS database lists sites on the NYS Brownfields Site List.	0.5 mi	2
RCRA-Non-Gen	RCRAInfo is USEPA's information system on sites which generate, transport, store treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). The RCRA-NonGen database includes sites that do not presently generate hazardous waste.	0.25 mi	16
NY/NJ MANIFEST	MANIFEST databases include documents that list and track hazardous waste from the generator through transporters to a storage or disposal facility.	0.25 mi	19
NY DRYCLEANERS	The DRYCLEANERS database contains a listing of all registered dry cleaning facilities	0.25 mi	2
E-DESIGNATION	The E-DESIGNATION database contains locations with an "E" designation placed by the New York City Department of City Planning (NYCDPC)	0.125	6

4.1.1 Federal- and State-Listed Facilities

Site. The Site address was not listed on any of the databases reviewed; however, it should be noted that, based on information from the New York City Department of City Planning, e-designations for air, noise, and hazardous materials have been placed on the Site (both lots) as part of the Crotona Park East / West Farms rezoning (CEQR #10DCP017X), certified on October 5, 2011. The e-designation texts are as follows:

Hazardous materials. Prior to redevelopment, the property owner must conduct a Phase I Environmental Site Assessment (Phase I) in accordance with the American society of Testing Materials (ASTM) E 1527-05, a soil and groundwater testing protocol, and remediation where appropriate, to the satisfaction of NYCDEP before issuance of construction-related NYCDOB permits. The (E) designation also requires mandatory construction-related health and safety plans, which also must be approved by NYCDEP.

Air quality. Any new residential and/or commercial development on the above-referenced properties must ensure that the heating, ventilating, and air conditioning stack(s) are located at least 140 feet from the lot line facing Rodman Place for fuel oil #2 and 40 feet from the lot line facing Rodman Place for natural gas to avoid any potential significant adverse air quality impacts.

Noise. To ensure an acceptable interior noise environment, future residential/commercial uses must provide a closed-window condition with a minimum of 42 dBA window/wall attenuation on all facades to maintain an interior noise level of 45 dBA. To achieve 40 dBA of building attenuation, special design

features that go beyond the normal double-glazed windows are necessary and may include using specially designed windows (i.e., windows with small sizes, windows with air gaps, windows with thicker glazing, etc.), and additional building attenuation. To maintain a closed window condition, an alternate means of ventilation must also be provided. Alternate means of ventilation includes, but is not limited to, air conditioning.

Note that the noise e-designation, further states that the 42 dBA level is “based on the assumption that each floor would be occupied by sensitive receptors such as residences, schools, a daycare center, etc. Some first-floor uses may, instead, be occupied by commercial uses. In these cases, the required attenuation shown in the tables would be adjusted to achieve an interior L₁₀ noise level of 50 dBA instead of 45 dBA.”

Adjoining and Surrounding Properties.

One (1) upgradient facility, New York City Board of Education Public School 6 (1000 Tremont Avenue), is located directly upgradient of the Site is listed on the RCRA-SQG and AST databases. The facility was listed as a CESQG in 1995, and non-generator status was verified in 2006 and 2007. Waste types previously disposed included polychlorinated biphenyls (PCBs) (waste codes B004 and B007). No violations were noted at this location and it is not considered a REC. One (1) upgradient listing, Boston Cleaners (2040 Boston Road), within 0.25 mile of the Site, is listed on the CESQG, FINDS, MANIFEST, DRY CLEANER, and US AIRS databases. Based on the information reviewed, this facility was listed as a large quantity generator (LQG) in 1986 and as a small quantity generator (SQG) in 1999, with recorded disposal of spent halogenated solvents (F002). The information reviewed did not indicate any violations and this listing is not a REC. One (1) SWF/LF listing, Delma Engineering Corp., is located approximately 0.3 miles and upgradient from the Site. A review of the information for this listing, which also appears on the TANKS and HIST UST databases, indicates the status as “inactive”. No violations or records of a release were noted and this listing is not considered a REC.

A review of the NY LTANKS database indicates that 22 LTANKS, 21 of which are upgradient, are located within 1/2 mile of the Site. Of the 21 upgradient LTANKS, 12 are also listed on the NY HIST LTANKS database. The NY HIST LTANKS database lists 21 NY HIST LTANKS within 1/2 mile, 20 of which are located upgradient of the Site. Based on the information reviewed, all upgradient LTANKS and NY HIST LTANKS cases have been closed. A review of the records for the upgradient listings does not indicate the presence of RECs. One upgradient LTANKS listing, Coliseum Bus Depot, is located approximately 326 feet north of the Site. The records for this facility, also listed on the NY SPILLS, AST, HIST AST, HIST UST and LTANKS databases, reference two spills (Spill Nos. 8904868 and 8905782) associated with tank test failures. Records for Spill 8905782 indicate that the No. 2 fuel oil tank was subsequently removed and the spill closed in 2000. Spill 8904868, for which the NYSDEC database references No. 2 fuel oil and diesel fuel, was closed in 2005. An investigation conducted after the reconstruction of the depot in 2006, indicated that the extent of contamination relating to Spill 8905782 was small and confined to an area beneath the existing depot. However, the records also reference a “historic plume” in the area, the extent of which is not defined. The possible presence of area-wide groundwater impacts is indicative of continued commercial and industrial uses, which are considered a REC.

Two upgradient listings, both of which are within 0.5 mile of the Site were identified on the BROWNFIELDS database. Contamination at Lebanon West Farms I and II (1160 Lebanon Street), included metals, semi-volatile organic contaminants (SVOCs), pesticides and low levels of VOCs (volatile organic contaminants) in soil and chlorinated VOCs in groundwater above New York State standards. The former railway yard is slated for eventual mixed use residential and commercial development, but is currently vacant. The record indicates that a soil vapor investigation will be

conducted should the current use change. 1800 Southern Boulevard, a former gasoline station and auto repair facility) is located approximately 0.3 mile from the Site. Contamination identified at this property included petroleum-related VOCs and SVOCs and metals in soil and groundwater and elevated VOCs in soil vapor. The remedy for this site has been completed and the Final Engineering Report submitted in December 2011. Both locations are being addressed under NYSDEC oversight within the BCP program and are not considered RECs.

One upgradient facility, West Farms Depot (1100 East 177th Street) is listed on the CBS, LTANKS and NY SPILLS databases. A review of the records for this listing indicates several prior spills, all of which have been closed.

A review of the NY SPILLS database indicates a total of 13 NY spills sites, nine (9) of which are upgradient, within 0.125 miles of the Site. All NY SPILLS cases have been closed. A total of six (6) listings, five (5) of which are upgradient, were included in the HIST SPILLS database. All HIST SPILL cases have been closed and, based on a review of these records, RECs were not identified.

Nearby sites are also located on the RCRA-NonGen, MANIFEST, TANKS, UST, AST, HIST UST, and HIST AST databases. Based on a review of these records, these facilities are not considered to be RECs.

DRYCLEANERS, a listing of registered dry cleaning facilities, contains two (2) dry cleaning operations within ¼ mile, one (1) of which is upgradient of the Site. The information for the upgradient facility, Boston Cleaners (2040 Boston Road) has been previously discussed. No violations were noted for these facilities and they are not considered RECs.

In addition to the above regulatory databases, the EDR Manufactured Gas Plant (MGP) and E Designation databases were reviewed. No information was available for the one (1) downgradient MGP listing and this listing is not considered a REC. A review of the E Designation database indicates six (6) listings, including the Site. These listings are not considered a REC.

The regulatory database review shows there were several releases in the area, including reference to area-wide groundwater impacts, which is indicative of historic commercial and industrial uses in the area, which are considered a REC.

4.1.2 FOIL Requests

On April 26, 2013, Freedom of Information Law (FOIL) requests for information pertaining to the Site were also filed with the following state and city agencies: New York State Department of Environmental Conservation (NYSDEC), New York State Department of Health (NYSDOH), New York City Department of Environmental Protection (NYCDEP), New York City Department of Health and Mental Hygiene, (NYCDOHM) and the New York City Fire Department (FDNY). To date no responses have been received. If any future response changes the conclusions of this report, Tenen will issue an addendum to this Phase I ESA.

5.0 SITE RECONNAISSANCE

On March 28, 2013, Matthew Carroll of Tenen Environmental conducted Site reconnaissance at the subject property and adjoining properties. Mr. Carroll was accompanied by a representative of the occupant, Mr. Mobi, manager of the Howard Johnson Express Inn. The weather was partly cloudy and in the mid 40-degrees Fahrenheit.

5.1 Site Observations

The Site consists of three different areas, including a vacant area covered with demolition debris, a hotel with rear parking and an asphalt-paved parking area. The vacant area is between West Farms Road and Boston Road, north of the hotel. The two-story hotel, a Howard Johnson Express Inn, fronts Boston Road with a porte-cochere and parking in the rear. The elevation increases along Boston Road towards the west and the elevation of the parking area to the southwest is approximately ten (10) feet higher than the vacant area. A summary of the Site reconnaissance is included in the table below; additional information is detailed as noted.

Summary of Site Reconnaissance Features

Feature	Additional Information?
Hazardous substances and/or petroleum products	No
Aboveground storage tanks (ASTs) or evidence of ASTs	No
Underground storage tanks (USTs) or evidence of USTs	No
Strong, pungent, or noxious odors	No
Pools of liquid likely to be hazardous materials or petroleum products	No
Drums	No
Unidentified substance containers	No
PCB-containing equipment	Yes
Subsurface hydraulic equipment	No
Heating/ventilation/air conditioning (HVAC)	Yes
Stains or corrosion on floors, walls, or ceilings (other than water)	No
Floor drains and sumps	No
Pits, ponds, or lagoons	No
Stained soil and/or pavement	No
Stressed vegetation	No
Waste or wastewater discharges to surface or surface waters on subject site (including stormwater)	Yes
Wells (irrigation, domestic, dry, injection, abandoned, monitoring)	No
Septic systems	No

The building is connected to public and/or publicly-regulated utilities, including natural gas, electric, stormwater and sewer. Stormwater drains are located in the rear parking area of the hotel. Trash is stored in a dumpster and removed by a private carting company.

Con Edison transformers vaults were observed in the sidewalk along Boston Road, in front of the hotel. While the transformers may contain PCBs, the equipment is owned by Con Ed and is located off-site.

HVAC is provided by individual electric units in each room.

No evidence of staining, odors or impacts to vegetation were observed in the paved parking lot to the southwest, the rear parking lot and the vacant area to the north. Some construction materials were staged on the rear parking lot and the vacant area.

No evidence of a REC was observed during Site reconnaissance.

5.3 Interviews

Tenen interviewed Mr. Pankaj Shah, representative of the Owner and User. Information provided by Mr. Shah is included on the User Questionnaire, included in Appendix E and incorporated throughout this ESA.

5.3 Adjoining and Surrounding Properties

The surrounding area is a mixture of residential, institutional and commercial uses. Adjoining properties include:

Direction	Use
South	Marble, granite and slate works to the southeast and a religious building to the southwest.
West	Auto body repair shop across Longfellow Avenue and a parking garage, liquor store and vacant area across Boston Road. An elevated rail line for the 2/5 subways is present along Boston Road.
North	The intersection of Boston Road, West Farms Road and Tremont Avenue followed by a parking area for a housing development to the northwest and commercial strip mall to the northeast.
East	West Farms Road followed by Public School 214.

No evidence of a REC was observed at any of the adjoining properties.

6.0 FINDINGS / OPINIONS

Tenen has conducted a review of ascertainable records and historical documentation in relation to the Site, adjacent properties and those within standard search radii. Site reconnaissance was conducted.

The Site, located in the Bronx, New York, consists of two (2) lots. The tax map designation of the property is Block 3016, Lots 42 and 38. Lot 42 is a roughly triangular-shaped parcel of 32,240 square feet bounded by Boston Road and West Farms Road. Lot 38 is a square parcel adjoining Lot 42 to the southwest and which fronts Longfellow Avenue. The property is currently improved with a hotel with rear parking, an asphalt-paved parking area and a vacant area covered with demolition debris.

The Site was developed as early as 1868, but with unknown uses. Historic maps dated 1885 through 1896 show the Site as developed with a group of six buildings labeled “carriage house”. By 1901, a wagon factory with several buildings is shown on the eastern portion and an additional building is present on the western part of the property. The 1915 map shows the Site as vacant except for two small buildings. By 1926, a two-story entertainment complex, including a lobby and 2,700-person capacity theater with a stage and dressing rooms, and a second floor dance palace, was constructed on the Site. In later years, the buildings also contained commercial spaces, offices, a motor freight operation, an auto repair shop, an awning manufacturer, a brush manufacturer and a pizzeria. The southwest portion was used as a parking area and a rear yard for the repair shop and auto service on the south adjacent property (1931 West Farms Road). Based on the 2011 C of O, a hotel was constructed around this time, which would have required the demolition of the former Site buildings.

Similar to the Site, adjacent and surrounding properties were predominantly developed by 1868. Part of the Bronx River was present on the southern part of the east adjacent property until approximately 1951, at which time the course was rerouted and this portion was filled in. Pertinent historic uses of adjacent properties include: a tannery, a fire engine house, a carriage house, a portion of “The Bronx Co. Bleaching, Dyeing and Printing Wks.” (including a print shop, a bleach house, a starch & dry house, a dye house, a drying room, an office, boilers and an engine room), a paint shop, an auto house, a roofer, an undertaker, laundries, auto repair shops, a rail yard, dry cleaners, bowling alley. Gasoline tanks, solvent tanks and filling stations are shown on adjacent properties. The nature of the surrounding area is similar to that of the Site and adjacent lots, with the earliest maps showing development with some residential and a variety of commercial and manufacturing uses.

Regarding the Site, adjacent and surrounding properties, the results of the Sanborn map, city directory, historic topographic map and aerial photograph reviews are consistent with commercial and industrial uses. The historic uses at the Site and adjoining and surrounding properties likely involved the use and disposal of hazardous materials, including solvents and petroleum products. Based on the widespread and long-term uses of these materials, it is likely that a release has occurred.

The database search indicated numerous listings of properties within the standard search radii on multiple regulatory databases. The regulatory database review shows there were several releases in the area, including reference to area-wide groundwater impacts, which is indicative of historic commercial and industrial uses in the area.

Both lots were included in the NYCDCP Crotona Park East Rezoning (CEQR #10DCP017X). The rezoning placed e-designations on the property for hazardous materials, air quality (fuel type and setback) and noise (42 dBA).

The findings indicate historic commercial and industrial uses at the Site, adjacent and surrounding properties. The historic uses at the Site and adjoining and surrounding properties likely involved the use and disposal of hazardous materials, including solvents and petroleum products. Based on the widespread and long-term uses of these materials, it is likely that a release has occurred and therefore, these uses are considered to be a REC.

7.0 CONCLUSIONS

Tenen has performed a *Phase I Environmental Site Assessment*, in conformance with the scope and limitations of ASTM Practice E 1527, for 1926 Longfellow Avenue and 1939 West Farms Road, in the Bronx, New York. Any exceptions to, or deletions or deviations from this practice are described in Section 1.4 of this report. This assessment has revealed *no evidence of recognized environmental conditions* in connection with the property, with the exception of the following:

- Historic commercial and industrial uses of the Site, adjacent and surrounding properties.

8.0 DECLARATION

I, Matthew Carroll, declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental Professional as defined in Section 312.10 of 40 CFR 312; and I have the specific qualifications based on education, training and experience to assess a site of the nature, history and setting of the subject Site. I have developed and performed the All Appropriate Inquires in conformance with the standards and practice set forth in 40 CFR Part 312.

Matthew Carroll
Environmental Professional

9TH AND 10TH FLOOR**

STAMP: [Professional Seal]

DATE: 11/11/12
JOB #: 09-51
DRAWN BY: KS
SCALE: AS NOTED
DRAWING NO.: A-106.00

FILE NO.: SHEET 11 OF 46

1 TYP. FLOORS 6TH THRU 8TH
 A-105 Scale 1/8" = 1'-0"

LEGENDS & SYMBOLS:

- CONCRETE FOUNDATION WALL
- CONCRETE BLOCK WALL
- SIMULATED STONE ON CONCRETE BLOCK EXTERIOR WALL SYSTEM
- NON-RATED STEEL STUD PARTITION
- FLUE BRICK ON CONCRETE BLOCK EXTERIOR WALL SYSTEM
- (2) TWO HOUR FIRE RATED STEEL STUD PARTITION
- EXTERIOR INSULATION FINISH SYSTEM ON CONCRETE BLOCK EXTERIOR WALL SYSTEM
- CONCRETE BLOCK WALL WITH (1) LAYER OF 5/8" GYPSUM BOARD ON EACH SIDE
- MECHANICAL SHAFT WALL
- SPRINT ABOVE
- FACE BRICK ON METAL STUD EXTERIOR WALL SYSTEM
- EXTERIOR INSULATION FINISH SYSTEM ON METAL STUD EXTERIOR WALL SYSTEM
- DEVOTED ROOM AREA
- PLAC UNIT REFER TO MECHANICAL DWGS.
- MINIMUM TYPE WITH GLAZING TYPE 2-SEE SPECIFICATIONS
- MINIMUM TYPE WITH GLAZING TYPE 3-SEE SPECIFICATIONS
- MINIMUM TYPE WITH GLAZING TYPE 3-SEE SPECIFICATIONS
- DOOR 1A4
- MECHANICAL SHAFT WALL
- SPRINT ABOVE
- FACE BRICK ON METAL STUD EXTERIOR WALL SYSTEM
- EXTERIOR INSULATION FINISH SYSTEM ON METAL STUD EXTERIOR WALL SYSTEM
- DEVOTED ROOM AREA
- PLAC UNIT REFER TO MECHANICAL DWGS.
- MINIMUM TYPE WITH GLAZING TYPE 2-SEE SPECIFICATIONS
- MINIMUM TYPE WITH GLAZING TYPE 3-SEE SPECIFICATIONS
- MINIMUM TYPE WITH GLAZING TYPE 3-SEE SPECIFICATIONS
- DOOR 1A4

Laboratory Reports

Technical Report

prepared for:

Hydro Tech Environmental (Brooklyn)
15 Ocean Avenue
Brooklyn NY, 11225
Attention: Sasha Rothenberg

Report Date: 08/28/2013
Client Project ID: 130146-1926 Longfellow Ave, Bronx, NY
York Project (SDG) No.: 13H0853

CT Cert. No. PH-0723

New Jersey Cert. No. CT-005

New York Cert. No. 10854

PA Cert. No. 68-04440

Report Date: 08/28/2013
Client Project ID: 130146-1926 Longfellow Ave, Bronx, NY
York Project (SDG) No.: 13H0853

Hydro Tech Environmental (Brooklyn)

15 Ocean Avenue
Brooklyn NY, 11225
Attention: Sasha Rothenberg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 22, 2013 and listed below. The project was identified as your project: **130146-1926 Longfellow Ave, Bronx, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0853

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

M-LSRD Original sample conc <50 X reporting limit.

J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Field Chain-of-Custody Record

NOTE: York's Std. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

PA Cert. No. 68-04440

Hydro Tech Environmental (Brooklyn)

15 Ocean Avenue
Brooklyn NY, 11225
Attention: Sasha Rothenberg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 26, 2013 and listed below. The project was identified as your project: **130146-1926 Longfellow Ave, Bronx, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0941

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-LSRD	Original sample conc <50 X reporting limit.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Corrective Action: Client submitted samples for Chromium Hexavalent & Trivalent Out of Hold Time - Client did Not submit TP-1 Trip Blank Vials as indicated on Chain-of-Custody - 08/27/2013

Field Chain-of-Custody Record

NOTE: York's Std. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

Attention: Sasha Rothenberg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 26, 2013 and listed below. The project was identified as your project: **130146-1926 Longfellow Ave Bronx, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0958

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 22, 2013 and listed below. The project was identified as your project: **130146-1936 West Farms Road, Bronx, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0850

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QM-07 The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.

M-LSRD Original sample conc <50 X reporting limit.

M-HCSpk Sample conc. >10 X spike conc.

J Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.

ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Brooklyn NY, 11225
Attention: Sasha Rothenberg

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 26, 2013 and listed below. The project was identified as your project: **130146-1936 West Farms Rd, Bronx, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0943

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-LSRD	Original sample conc <50 X reporting limit.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
EXT-EM	The sample exhibited emulsion formation during the extraction process. This may affect surrogate recoveries.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
<hr/>	
ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Corrective Action: Client submitted sample for Chromium Hexavalent & Trivalent Out of Hold Time - 08/27/2013

NOTE: York's Std. Terms & Conditions are listed on the back side of this document. This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 26, 2013 and listed below. The project was identified as your project: **130146-1936 West Farms Rd Bronx, NY**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H0956

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.

ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.

RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.

MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.

NR Not reported

RPD Relative Percent Difference

Wet The data has been reported on an as-received (wet weight) basis

Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two.

For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.

Field Chain-of-Custody Record - AIR

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on August 28, 2013 and listed below. The project was identified as your project: **1936 West farms Rd Bronx, NY.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 13H1042

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the MDL, with values between the MDL and the RL being "J" flagged as estimated results.
