CERTIFICATION

I, Deborah J. Thompson, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 856 East 213 Street Associates, LLC Site, (NYC VCP Site No. 12CVCP061X). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Deborah J Thompson 5/21/12 Deborah J Thompson
Qualified Environmental Professional Date Signature

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 856 East 213th Street in Williamsbridge/Baychester section of Bronx, New York and is identified as Block 4671 and Lot 64 on the New York City Tax Map. Figures 1 & 2 show the Site location. The Site is 6,267-square feet and is bounded by three-story apartment structure to the northeast, a two-story structure which houses a church to the southeast, a multi-family apartment house to the northwest, and to the south/southwest by a multi-family dwelling located along Bronxwood Avenue. A map of the site boundary is shown in Figure 3. Currently, the Site is a vacant, undeveloped property awaiting development.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of six-story residential building. Layout of the proposed site development is presented in Figure 3. The current zoning designation is Residential R6. The character of medium-density districts range from neighborhoods with a diverse mix of building types and heights. The proposed use is consistent with existing zoning for the property.

The irregularly shaped 0.18-acre parcel is currently a vacant undeveloped property. It has 50 feet of lot frontage with a lot depth of 125.33 feet. Planned site improvement work includes the construction of a six-story apartment complex with a basement and common areas. The building will contain 36 units. The basement level will house mechanical and utility meter rooms, tenant laundry center, boiler room (natural gas fired system), refuse storage area, and service connections. The building will be serviced by one passenger elevator and two interior stairways. The newly developed building footprint area is 53'4" wide by 59'6" deep (on ground floor), while the second floor up is 75' wide by 59'6" deep. Gross building square footage is 25,698 feet. Parking areas for eighteen vehicles will be provided at grade level. The proposed development will not cover the entire footprint of the site as a small quadrant in the southern

section of the property has been slated as a recreational area (see Figure 3). As the proposed site improvement work includes a building with a basement area, the planned maximum depth of excavation would be no greater than twelve feet. Earth moving would include the area within the building footprint, with a total maximum volume of approximately 1,389 yd³. The excavation for the site structure is not anticipated to be below the groundwater table. Each of the two proposed detection tanks is eight feet high and five feet in diameter. The excavation required for the placement of these tanks includes a twelve foot earthen cavity with a one foot layer of 1 ¼-inch stone placed on the bottom of the excavation. Once the tanks are wrapped in filter fabric and set within the excavation, the remainder of the void space will be filled with gravel.

Summary of Past Uses of Site and Areas of Concern

Public database research indicates that the subject property was acquired by 856 East 213th Street Associates, LLC in January of 2011. Former property owners have reportedly included Gadola Equities, Inc. (2010-2011), Irene and Sterling Lynch (1980-2010), and 856 East 213th Street Corporation (?-1980). A reviewed 1918 Sanborn Fire Insurance Map identified the subject and adjoining East 213th Street properties to be undeveloped. Insurance maps from 1935 to 1989 indicated the site (formerly lots 64-66) to have been improved with a two-story private residence and three detached private parking garages. On-line City of New York Building Department records indicated the residential structure (~21'-34' footprint) to have been built circa-1920. All four former site structures were demolished in June of 2011 by Ferry Point Industries (Permit No. 220110396 issued on March 28, 2011) as part of the property development project.

At present, the site is void of any improvements while awaiting development. Based upon the findings of the Phase I ESA and the site inspection, there were no areas of concern where former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal of contaminated media.

Summary of the Work Performed under the Remedial Investigation

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);

2. Installed eight soil borings across the entire project Site, and collected thirteen soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Although three temporary groundwater monitoring wells were installed throughout the Site to establish groundwater flow, groundwater samples could not be collected for chemical analysis due to the lack of water above the bedrock aquitard;
4. Installation of three soil vapor probes around Site perimeter and collected three samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 114.60 to 119.20 feet.
2. Depth to bedrock is approximately 9 - 12 feet at the Site.
3. The stratigraphy of the site, from the surface down, consists of four feet of mixed fill (silts and sand), underlain by eight feet of fine to medium sands.
4. Soil/fill samples collected during the RI showed no VOCs exceeded Track I SCOs. Two VOCs were detected (acetone and methylene chloride) and both were also identified in lab blanks. No PCE, TCE, 1,1,1-TCA or other VOC was detected. All SVOC concentrations were below Track I SCOs with the exception of Benzo(k)fluoranthene, Benzo(a)anthracene and Benzo(a)pyrene were marginally above Track I SCOs in one shallow sample. Benzo(a)pyrene and Benzo(a)anthracene were slightly above Track II Restricted Residential SCOs in one shallow sample. No PCBs were detected. All pesticides concentrations were below Track I SCOs with the exception of Dieldrin (maximum 18.2 ppb) and 4,4'-DDD (maximum 117ppb). Five metals including chromium (maximum 46.9 ppm), copper (maximum 79.7 ppm), lead (maximum 385 ppm), nickel (maximum 49.8 ppm) and zinc (maximum 418 ppm) exceeded Track I SCOs but all values were well below Track II Restricted Residential SCOs. Overall, findings for soil were unremarkable and did not show a source of contamination on this property.

5. Although three temporary groundwater monitoring wells were installed throughout the Site to establish groundwater flow, groundwater samples could not be collected for chemical analysis due to the lack of water above the bedrock aquitard.
6. Soil vapor samples collected during the RI showed no significant detections in the soil vapor at the site with the exception of 1,1,1-trichloroethane (1,1,1-TCE) (maximum 4,700 ug/m³) in one of three sampling locations. PCE and TCE were not detected above laboratory detection limits. In addition to the elevated level of 1,1,1-TCE, other constituents reported above laboratory detection limits included 1,3-butadiene, benzene, toluene and xylene, identified as hydrocarbons. These soil gas compounds (including 1,1,1-TCE) reported during analysis were not encountered during soil sampling in any monitoring location across the site and are not consistent with historical residential use of the property. Soil vapor contamination may be originating from an off-site source.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

856 East 213 Street Associates, LLC has enrolled in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 6,267-square feet site located at 856 East 213th Street in Williamsbridge/Baychester section of Bronx, New York. Residential use is proposed for the property. The RI work was performed on March 20, 2012. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 SITE LOCATION AND CURRENT USAGE

The Site is located at 856 East 213th Street in Williamsbridge/Baychester section of Bronx, New York and is identified as Block 4671 and Lot 64 on the New York City Tax Map. Figures 1 & 2 show the Site location. The Site is 6,267-square feet and is bounded by three-story apartment structure to the northeast, a two-story structure which houses a church to the southeast, a multi-family apartment house to the northwest, and to the south/southwest by a multi-family dwelling located along Bronxwood Avenue. A map of the site boundary is shown in Figure 3. Currently, the Site is a cleared, undeveloped property identified as Block 4671 and Lot number 64 on the New York City Tax Map.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of six-story apartment housing structure. Layout of the proposed site development is presented in Figure 3. The current zoning designation is Residential R6. The character of medium-density districts range from neighborhoods with a diverse mix of building types and heights. The proposed use is consistent with existing zoning for the property.

The irregularly shaped 0.18-acre parcel is currently a cleared undeveloped property. It has 50 feet of lot frontage with a lot depth of 125.33 feet. Planned site improvement work includes the construction of a six-story apartment complex with a basement and common areas. The

building will contain thirty-six units. The basement level will house mechanical and utility meter rooms, tenant laundry center, boiler room (natural gas fired system), refuse storage area, and service connections. The building will be serviced by one passenger elevator and two interior stairways. The newly developed building footprint area is 53'4" wide by 59'6" deep (on ground floor), while the second floor up is 75' wide by 59'6" deep. Gross building square footage is 25,698 feet. Parking areas for eighteen vehicles will be provided at grade level. The proposed development will not cover the entire footprint of the site as a small quadrant in the southern section of the property has been slated as a recreational area (see Figure 3). As the proposed site improvement work includes a building with a basement area, the planned maximum depth of excavation would be no greater than twelve feet. Earth moving would include the area within the building footprint, with a total maximum volume of approximately 1,389 yd³. The excavation for the site structure is not anticipated to be below the groundwater table. Each of the two proposed detention tanks is eight feet high and five feet in diameter. The excavation required for the placement of these tanks includes a twelve foot earthen cavity with a one foot layer of 1 ¼-inch stone placed on the bottom of the excavation. Once the tanks are wrapped in filter fabric and set within the excavation, the remainder of the void space will be filled with gravel.

1.3 DESCRIPTION OF SURROUNDING PROPERTY

The subject and surrounding properties are located in an urban residential setting in the Borough of the Bronx, City and State of New York. Adjoining property usage is utilized for mainly for multi-family residential properties. There are no identified sensitive receptors within a 250 to 500-foot radius of the site.

Figure 1 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 PAST USES AND OWNERSHIP

Public database research indicates that the subject property was acquired by 856 East 213th Street Associates, LLC in January of 2011. Former property owners have reportedly included

Gadola Equities, Inc. (2010-2011), Irene and Sterling Lynch (1980-2010), and 856 East 213th Street Corporation (?-1980). A reviewed 1918 Sanborn Fire Insurance Map identified the subject and adjoining East 213th Street properties to be undeveloped. Insurance maps from 1935 to 1989 indicated the site (formerly lots 64-66) to have been improved with a two-story private residence and three detached private parking garages. On-line City of New York Building Department records indicated the residential structure (~21'-34' footprint) to have been built circa-01920. All four former site structures were demolished in June of 2011 by Ferry Point Industries (Permit No. 220110396 issued on March 28, 2011) as part of the property development project.

2.2 PREVIOUS INVESTIGATIONS

The Phase I report was prepared by Team Environmental Consultants, Inc. for 856 East 213 Street Associates, LLC dated February 1, 2012. This Phase I identified no recognized environmental conditions (RECs) on the subject property.

2.3 SITE INSPECTION

At present, the site is void of any improvements while awaiting development. Prior to initiation of the Phase II Environmental Site Assessment, a site inspection was performed on March 20, 2012 under the direction of Deborah J. Thompson, the Qualified Environmental Professional (QEP) certifying this report to evaluate areas of concern.

2.4 AREAS OF CONCERN

Based upon the findings of the Phase I ESA and the site inspection, there were no areas of concern where former activities are known or suspected to have resulted in generation, manufacture, refinement, transport, storage, handling, treatment, discharge, release and/or disposal of contaminated media.

Phase 1 Report is presented in Appendix A.

3.0 PROJECT MANAGEMENT

3.1 PROJECT ORGANIZATION

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Deborah J. Thompson.

3.2 HEALTH AND SAFETY

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. The Health and Safety Plan is attached in Appendix B for review.

3.3 MATERIALS MANAGEMENT

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

856 East 213th Street Associates, LLC performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installation of eight soil borings across the entire project Site, and collected thirteen soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installation of three groundwater monitoring wells throughout the Site to establish groundwater flow, but could not collect groundwater samples for chemical analysis due to the lack of groundwater above the bedrock aquitard;
4. Installation of three soil vapor probes around Site perimeter and collected three samples for chemical analysis.

4.1 GEOPHYSICAL INVESTIGATION

Geophysical surveys were not conducted as a part of this investigation.

4.2 BORINGS AND MONITORING WELLS

Drilling and Soil Logging

A qualified environmental driller advanced 8 investigative borings, and a QEP supervised the Site work, screened the soil samples for environmental impacts, and collect environmental samples for laboratory analysis during the site investigation. The rationale for the soil borings, soil gas and groundwater sampling is as follows:

- Six sampling locations were proposed under the area for the planned apartment building. Three locations called for surficial (0-2' below grade) and deep (11-13' below grade) soil samples will ensure that impacts to site soils have not occurred from potential on-site or known off-site source(s). Two locations beneath the proposed building are slated for groundwater sampling. Groundwater sampling to occur in this location to confirm the absence of targeted contaminants which could off-gas creating the potential to migrate into the building and cause vapor intrusion. Soil gas sampling is also proposed for this same rationale.

- The remaining proposed sampling locations include six surficial (0-2' below grade) soil samples within the parking and recreational areas. The purpose of the soil analysis in these areas was to ensure there were no releases of contaminants at the site. The uppermost surficial material is typically deemed noteworthy for study as it constitutes the material with the highest potential which humans could have dermal contact and incidental ingestion. One sample location within the main parking area is proposed for both surficial and deep soil horizon sampling as well as groundwater sampling. Said monitoring point is located within the area which is anticipated to hold the detention tanks.

Boring logs were prepared by a Geologist are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 4.

Groundwater Monitoring Well Construction

As stated previously, groundwater could was not encountered in any monitoring location across the site. The lack of groundwater is likely the result of the presence of a bedrock aquitard detected nine – twelve feet across the subject parcel. Therefore, groundwater monitoring could not be performed during the course of this investigation.

4.3 SAMPLE COLLECTION AND CHEMICAL ANALYSIS

Sampling performed as part of the field investigation was conducted for site characterization purposes and for satisfying the E-Designation requirements. Other means for bias of sampling was based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. Soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

DT Consulting Services, Inc. (DTCS) mobilized to the site with Todd J. Syska, Inc. (Geoprobe services contractor) on March 20, 2012 to perform the subsurface investigation. Employing a Geoprobe track-mounted drill rig, soil samples were collected at eleven pre-

selected borehole locations continuously from ground surface to an approximate depth of twelve feet below grade surface (bgs). Soil samples were obtained by advancing a twenty-four inch long, two inch outer diameter, stainless split spoon sampler equipped with a disposable acetate liner into the undisturbed soils. To prevent cross-contamination, all sampling equipment was decontaminated between each soil boring field location. The decontamination procedure is as follows:

- Wash with a detergent solution (Alconox);
- Rinse with potable water;
- Rinse with de-ionized water; and
- Air dry

A DTCS Geologist performed soil VOC screening and classification immediately following the collection of subsurface sampling cores. The field screening was conducted using a calibrated Mini-Rae Photoionization Detector (PID). Upon removal from the subsurface, headspace VOC screening was completed on each four foot soil sample interval (i.e. 0-4'/4-8'). This screening was performed by placing the selected soil sample in a Ziploc® style freezer bag, sealing the bag, and after a short pause, yielding stabilized readings with a PID calibrated to 100 parts-per-million (ppm) isobutylene standard. During performance of the field investigation, headspace screening yielded non-detect total petroleum hydrocarbons in parts-per-million (ppm) within each soil profile analyzed.

As detected during this investigation, the lithology of overburden materials encountered at the subject property can be characterized as light brown mixed fill (0-4' bgs), underlain by fine silts and sand (4-12' bgs). The bedrock surface was encountered approximately 9.8 – 12' below grade where resistance was encountered. No visual signs of groundwater were encountered during the investigation (i.e., moist or saturated soils) in any sampling location.

Boring logs were prepared by a Geologist are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 3.

Thirteen soil samples were submitted for chemical analysis during this RI. Field quality controls for laboratory confirmation samples include the collection and analysis of a field duplicate and a trip blank. The frequency of collection for the specified QC field samples is as follows:

- ✓ A trip blank was prepared before the sample bottles are sent by the laboratory. A trip blank was included with each shipment of samples where sampling and analysis for VOC is planned (water matrix only).
- ✓ One field duplicate was planned during the course of this investigation. A duplicate sample was collected by initially collecting twice as much material as is normally collected for a sample. After mixing, the material will be apportioned into two sets of containers.

The samples collected for analysis required preservation prior to shipment. Preservation of the sample ensures sample integrity and prevents or minimizes degradation or transformation of the constituents to be analyzed. Specific preservation requirements included proper handling, packaging in laboratory-supplied sample containers, and chilled to 4° Celsius (°C) for shipping to the contract analytical laboratory. The DTCS Field Team used field logbooks or specific field forms to record pertinent information regarding subsurface characteristics, field screening results, and confirmatory sampling activities. Field staff recorded the project name and number, date, sampling personnel on site, other personnel present, weather conditions, and other relevant events to sampling activity in a chronological order. The field log book and/or analysis forms are maintained in the project file. Each sample was also recorded onto a chain-of-custody (COC) form. The form included the project name and number, names of the field sampling personnel, the sample number, date and time the sample was collected, whether the sample is a composite or grab sample, sample location, number of containers per sample number, constituents to be analyzed, and pertinent comments. The form documented the date, time, and signature of person(s) relinquishing and receiving custody of the samples.

Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 1. Figure 4 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

Groundwater Sampling

Groundwater sampling was not conducted during the course of this investigation due to the lack of water bearing formations located above the bedrock aquitard.

Soil Vapor Sampling

Three soil vapor probes were installed and three soil vapor samples were collected for chemical analysis during this RI at a depth of approximately 12 feet bgs. Soil vapor sampling locations are shown in Figure 4. Soil vapor sample collection data is reported in Table 2. Soil vapor sampling logs are included in Appendix C. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

The vapor implants were installed with the Geoprobe. To accomplish this task, a temporary sampling point was installed consisting of a two inch diameter core. Following the installation of the core, the point was sealed off above ground surface using bentonite slurry to prevent surface air infiltration. Coupled with the laboratory-supplied SUMMA canister, subsurface sampling included the use of a helium tracer set up at grade level. This allows delivery of the tracer that will be detected in the subsurface vapor analysis, if vapors from above grade are leaking through the constructed seal, into the sample zone below. Following the helium tracer setup and recording of initial canister pressure, the sampling zone was purged of a minimum of three volumes of vapors through dedicated tubing to ensure representative sampling of subsurface conditions and field screened with a photoionization detector or PID. Laboratory-grade helium, a Model MGD-2002 Multi-Gas Leak Locator and pre-cleaned buckets were used for the leak tracer test. Once the Teflon tubing was sealed to the ground at each sampling location, the tubing was extended through a hole in the top of an upside-down, pre-cleaned five gallon bucket that was sealed to the ground. The tubing extending from the hole at the top of the bucket was then connected to the helium detector. A second hole was drilled in the bottom of the bucket, where helium was injected. Once the bucket filled up with helium, the tank was turned off. Then it was necessary to wait a few minutes to check if the helium was able to infiltrate through the seal into the ground. Afterwards, as a control measure, the helium detector was placed under the bucket to make sure that it was able to detect helium.

The NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York states that a helium concentration less than 10 percent does not indicate a significant leak. Both the “before and after” helium test performed on the sub-slab vapor point, returned zero ppm results and consequently showed no evidence of any significant leaks.

Soil vapor sampling was collected for analysis employing a six liter SUMMA canister equipped with a laboratory-calibrated flow control device to facilitate the collection of the samples for a 2-hour sample duration time. During both purging and sampling, the flow rate was restricted to less than (<) 0.2 liters per minute and connected directly to the dedicated tubing.

Following sampling, the pressure of the SUMMA canister was recorded and the temporary well point backfilled with cement slurry.

Samples collected in Summa canisters were certified clean by the laboratory and analyzed by using USEPA Method TO-15. A sample log sheet was maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Deborah J. Thompson.
Chemical Analytical Laboratory	Chemical analytical laboratory used in the RI is NYS ELAP certified and was analyzed by York Analytical Laboratories, Inc.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000);

--	--

Results of Chemical Analyses

Laboratory data for soil and soil vapor has been placed in Appendix D for review and are summarized in Tables 3 & 4, attached.

5.0 ENVIRONMENTAL EVALUATION

5.1 GEOLOGICAL AND HYDROGEOLOGICAL CONDITIONS

Stratigraphy

While conducting the investigation on-site, characteristics and thickness of geologic units were documented in a field log. Summaries of this data maybe referenced in Appendix C, attached. Soils from grade to approximately four feet below grade surface consisted of mixed fill (silt and sands) along with gravel and fragments of brick. Soils beneath this horizon consisted of fine – medium grade sands. The bedrock surface which halted drilling activities due to resistance was documented between nine and twelve feet below grade. Field screening with a calibrated PID did not produce positive responses in any soil boring location across the site.

Hydrogeology

Data collected to describe the hydrogeology of this site is limited due to the presence of bedrock from 9.8 – 12 feet below grade surface across the property.

5.2 SOIL CHEMISTRY

Soil/fill samples collected during the RI showed no VOCs exceeded Track I SCOs. Two VOCs were detected (acetone and methylene chloride) and both were also identified in lab blanks. No PCE, TCE, 1,1,1-TCA or other VOC was detected. All SVOC concentrations were below Track I SCOs with the exception of Benzo(k)fluoranthene, Benzo(a)anthracene and Benzo(a)pyrene were marginally above Track I SCOs in one shallow sample. Benzo(a)pyrene and Benzo(a)anthracene were slightly above Track II Restricted Residential SCOs in one shallow sample. No PCBs were detected. All pesticides concentrations were below Track I SCOs with the exception of Dieldrin (maximum 18.2 ppb) and 4,4'-DDD (maximum 117ppb). Five metals including chromium (maximum 46.9 ppm), cooper (maximum 79.7 ppm), lead (maximum 385 ppm), nickel (maximum 49.8 ppm) and zinc (maximum 418 ppm) exceeded Track I SCOs but all values were well below Track II Restricted Residential SCOs. Overall, findings for soil were unremarkable and did not show a source of contamination on this property.

Volatile Organic Compounds

Soil testing revealed two VOCs with notable concentrations above laboratory detection limits. Methylene chloride was documented in each of the thirteen soil samples analyzed at concentrations ranging from 16 – 30 microgram per kilogram ($\mu\text{g}/\text{kg}$). The second compound, acetone, was reported in six samples at concentrations ranging from 11 – 37 $\mu\text{g}/\text{kg}$. Although encountered, both VOCs were also reported in the associated analysis batch blank and thus, are considered laboratory contaminants. The analytical data is summarized in Table 3 and the analytical data report is provided in Appendix D.

Semi-volatile Organic Compounds

Eighteen semi-volatile compounds were detected among the thirteen soil samples analyzed. All of the detected SVOCs were polycyclic aromatic hydrocarbons (PAHs). SVOCs were encountered in five of the thirteen soil samples (SB-1, 1A, 4, 6 and SB/GW-3B). The detected concentrations ranged from 53.3 $\mu\text{g}/\text{kg}$ (Fluorene) to 1,780 $\mu\text{g}/\text{kg}$ (Fluoranthene), with all reported compounds falling below 6 NYCRR Part 375 unrestricted SCOs, with the exception of Benzo(a)pyrene within soil boring SB-4 (sample concentration of 1100 $\mu\text{g}/\text{kg}$ vs. guidance of 1000 $\mu\text{g}/\text{kg}$), Benzo(a)anthracene (sample concentration of 1,060 $\mu\text{g}/\text{kg}$ vs. guidance of 1,000 $\mu\text{g}/\text{kg}$) and Benzo(k)fluoranthene (sample concentration of 821 $\mu\text{g}/\text{kg}$ vs. guidance of 800 $\mu\text{g}/\text{kg}$). All of the remaining samples were returned with non-detect sample concentrations from the laboratory. The exceedances are attributed to the presence of historic urban fill materials and any combusted materials therein. The analytical data is summarized in Table 3 and the analytical data report is provided in Appendix D.

TAL Metals

Metals were detected in all of the soil boring samples analyzed, owing to their natural presence in rock and soil minerals. Most of the twenty-three TAL metals encountered during laboratory testing were below 6 NYCRR Part 375 unrestricted SCOs. Several metals exceeded Track I Unrestricted SCOs including chromium, copper, lead, and zinc. Most exceedances were minor and all were well below Track II Restricted Residential SCOs. Elevated metal concentrations are likely attributed to historic fill material and increased vehicular traffic found in urban areas. Research has shown that vehicular traffic has traditionally been the most widespread lead source, owing to the emissions from motor vehicles powered with leaded

gasoline. The analytical data is summarized in Table 3 and the analytical data report is provided in Appendix D.

Pesticides and PCBs

Three pesticide compounds were encountered within Soil borings SB-1, 1A and SB/GW-3B; the remaining soil borings were returned with non-detect sample concentrations. Those compounds which displayed laboratory detectable concentrations included 4-4'-DDD, 4,4'-DDT and dieldrin at concentrations ranging from 6.9 µg/kg - 28.8 µg/kg. Each of the three reported pesticides were found to fall above Track I SCOs and well below Track II Restricted Residential SCOs.

Soils encompassing each of the thirteen samples submitted for analysis were all returned with non-detect contaminations for PCBs.

The analytical data is summarized in Table 3 and the analytical data report is provided in Appendix D.

Conclusions

The detection of targeted compounds as encountered during this investigation appears to be concentrated in the vicinity of soil borings SB-1, 1A (duplicate), 4, 6 and SB/GW-3B. With the exception of boring SB-4, all of the identified borings with sample concentrations which fall between Track I SCOs and Track II Restricted Residential SCOs.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 3. Figure 5 has shown that most all of the detected values for soil/fill did not exceed the 6 NYCRR Part 375-6.8(b) or Track 2 Soil Cleanup Objectives.

5.3 SOIL VAPOR CHEMISTRY

The results of soil vapor sampling indicate VOCs associated with chlorinated solvents and hydrocarbon constituents are present within the three soil gas samples collected on-site. A summary table of data for all chemical analytical work performed on soil vapor is included in Table 4. The full analytical report is included in Appendix D

The major on-site vapor concentrations (total concentrations of VOCs) range from 269 microgram per cubic meter (mcg/m³) to 241 mcg/m³ in soil gas SG-1 and SG-3 respectively. The on-site vapors in these samples are consistent with solvents found in building materials, cleaning products, paints, and metal degreasing agents (1,1,1-trichloroethane), and hydrocarbon constituents including 1,3-butadiene, benzene, toluene and xylenes. Concentrations of detected 1,1,1-trichloroethane ranged from non-detect within Soil Gas SG-3 to 4,700 mcg/m³ within Soil Gas SG-2. Soil vapors with reported hydrocarbon constituents such as 1,3-butadiene (maximum concentration of 20 mcg/m³), benzene (maximum concentration of 4.9 mcg/m³), toluene (maximum concentration of 6 mcg/m³) and xylene (maximum concentration of 3 mcg/m³) were also identified during soil gas analytical testing.

Conclusions

Soil vapor samples collected during the RI showed no significant detections in the soil vapor at the site with the exception of 1,1,1-trichloroethane (1,1,1-TCA) (maximum 4,700 ug/m³) in one sampling location. PCE and TCE were not detected above laboratory detection limits. In addition to the elevated level of 1,1,1-TCA, other constituents reported above laboratory detection limits included 1,3-butadiene, benzene, toluene and xylene, identified as hydrocarbons. These soil gas compounds (included 1,1,1-TCA) reported during analysis were not encountered during soil sampling in any monitoring location across the site and are not consistent with historical residential land usage. Contaminant sources are likely originating from off-site source.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 4.

Figure 6 shows the location and posts the values for soil vapor samples with detected concentrations above the mean sample concentrations as documented in NYS DOH Final Guidance on Soil Vapor Intrusion (October 2006).

5.4 PRIOR ACTIVITY

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.5 IMPEDIMENTS TO REMEDIAL ACTION

There are no known impediments to remedial action at this property.

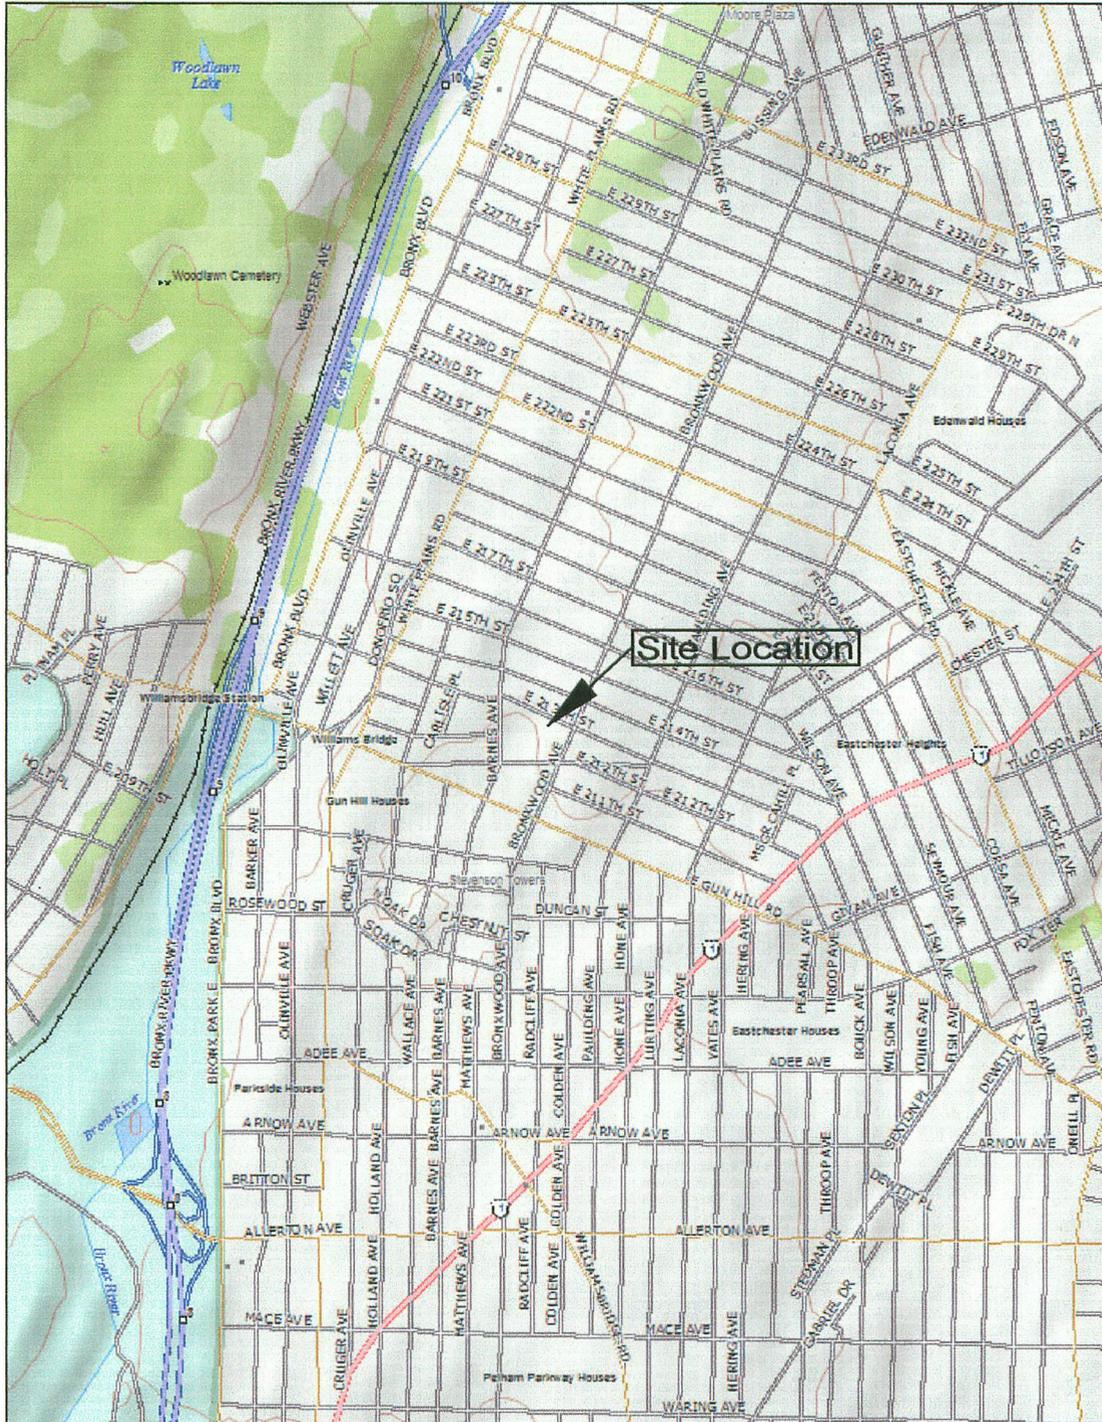

Site-Specific Standards, Criteria and Guidance

- 6 NYCRR Part 371 - Identification and Listing of Hazardous Wastes
- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- 6 NYCRR Parts 700-706 - Water Quality Standards (June 1998)
- STARS #1 - Petroleum-Contaminated Soil Guidance Policy
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- Fish and Wildlife Impact Analysis for Inactive Hazardous Waste Sites (October 1994)
- Technical Guidance for Screening Contaminated Sediments (January 1999)
- NYSDOH Indoor Air Sampling & Analysis Guidance (August 8, 2001 or subsequent update)
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)
- DER Interim Strategy for Groundwater Remediation at Contaminated Sites in New York State
- 6 NYCRR Part 612 - Registration of Petroleum Storage Facilities (February 1992)
- 6 NYCRR Part 613 - Handling and Storage of Petroleum (February 1992)
- 6 NYCRR Part 614 - Standards for New and Substantially Modified Petroleum Storage Tanks (February 1992)
- 40 CFR Part 280 - Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks

FEBRUARY 1, 2012

1.0 EXECUTIVE SUMMARY

Team Environmental Consultants, Inc. (TEAM), was authorized by 856 East 213 Street Associates, LLC to conduct a Phase I Environmental Site Assessment (ESA) of a planned multi-family residential property located at 856 East 213th Street in the Borough of Bronx, New York. TEAM's Phase I ESA was conducted in general conformance with ASTM Practice E 1527-05 (Standard Practice for Phase I ESA Process) guidelines. The objective of this effort was to identify significant environmental impairments and liabilities associated with the subject property. The requested scope of work included the following main tasks: 1) Review of readily available regulatory information; 2) Performance of Phase I ESA interviews and a walk-through property inspection; 3) Review of a federal and state environmental database report; and 4) Documentation of findings in a Phase I ESA Report.

Based on the property setting and planned site use, availability of a municipal water supply, review of available information, performance of Phase I ESA interviews, and findings of the property walk-through inspection, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the property were identified.

2.0 PROPERTY DESCRIPTION

2.1 Site Description

The subject property is located along the southwestern side of East 213th Street, approximately one-half mile southeast of the Bronx River Parkway, in the Borough of Bronx, City and State of New York (Figures 1 and 2). The site is situated within a urban residential setting and is bordered to the northwest by a three-story apartment house structure (852 East 213th Street), to the northeast by East 213th Street and multi-family residential properties, to the southeast by a two-story structure (852 East 213th Street) which houses a church (The Search of Life Church of God) and residential apartments, and to the south/southwest by a multi-family dwelling located along Bronxwood Avenue. The site topography is at grade with East 213th Street and slopes gradually downward towards the southwest. Photographs obtained during performance of the property walk-through inspection are presented within Attachment A.

The irregularly shaped 0.18-acre (~75' x 107') parcel is currently a cleared undeveloped property. Planned site improvement work calls for the construction of a six-story apartment house structure. The building will contain thirty-six residential units. The basement level will house mechanical and utility meter rooms, tenant laundry center, boiler room (natural gas fired system), refuse storage area, and service connections. Parking areas for eighteen vehicles will be provided on the

FIGURE 1 - SITE LOCATION MAP

BRONX, NEW YORK

FIGURE 2 - PROPERTY LOCATOR MAP

ground floor level. The building will be serviced by one passenger elevator and two interior stairways. Construction activities are expected to commence within the next several weeks (all required permits and regulatory approvals have been granted). Completion of the project is expected within a nine to twelve month time frame. No formal site development plans were available for review.

The potable water supply and sanitary waste treatment service will be provided by the City of New York (New York City Department of Environmental Protection). Individual electrical and natural gas meters will be found within the basement level. No underground or aboveground petroleum storage tanks will be associated with the building. Electrical service and natural gas are supplied to the area by Consolidated Edison Utilities (ConEd). Non-hazardous solid waste will be removed for offsite disposal by the City of New York.

2.2 Site History

An on-line New York City Department of Finance Database indicates the subject property (City of New York Block 4671, Lot 64) to have been acquired by 856 East 213th Street, LLC in January of 2011. Former property owners have reportedly included Gadola Equities, Inc. (2010-2011), Irene and Sterling Lynch (1980-2010), and 856 East 213th Street Corporation (?-1980). No previously conducted title searches, documentation detailing historic property ownership, or contact information for former property owners was available. None of the owners on record appear to have been an industrial concern that would be expected to have utilized the property for the manufacturing, storage, or disposal of hazardous materials.

A reviewed 1918 Sanborn Fire Insurance Map (Section 2.5) identified the subject and adjoining East 213th Street properties to be undeveloped. Insurance maps from 1935 to 1989 indicated the site (formerly Lots 64-66) to have been improved with a two-story private residence and three detached private parking garages. On-line City of New York Building Department records indicated the residential structure (~21' x 34' footprint) to have been built circa-1920. All four former site structures were demolished in June of 2011 by Ferry Pont Industries (Permit No. 220110396 issued on March 28, 2011) as part of the property development project. Ferry Pont Industries business owner, Cliff Ferrandi, informed TEAM that no stained soils or buried drums/tanks were discovered during the performance of building demolition work or site grading activities. This was conformed by property owner representative and developer, Michael Froning (856 East 213th Street, LLC). No site or regulatory information as to historic use of the property for commercial, industrial, or manufacturing purposes (i.e., activities expected to have routinely produced regulated hazardous materials or waste products) was available during the Phase I Environmental Site Assessment.

2.3 User Provided Information

No previously prepared title records, Phase I or II Environmental Site Assessment reports, information concerning environmental liens, property use limitations, valuation reduction based on environmental issues, or commonly known/reasonably ascertainable information that is material to recognized environmental conditions in connection with the subject site was provided to TEAM during performance of the Phase I ESA.

2.4 Aerial Photograph Review

Aerial photographs of the subject property location were reviewed by TEAM to assist with the evaluation of historic site use. Photographs were obtained from an on-line Google Earth (April 1994, March 2003, April 2008, and June 2010) web site. Review of the 1994 figure was limited due to poor image quality. All four figures identified the subject property to be improved with a private residence and several detached garage structures. Neighboring East 213th Street and Bronxwood Avenue properties were shown to be used for residential purposes. The scale and clarity of these images precluded an in-depth inspection of the property for visual evidence of environmental impairment (e.g., aboveground petroleum storage tanks, fuel dispensing pumps, dumping). Copies of referenced photographs are found in Attachment B.

2.5 Sanborn Fire Insurance Map Review

Sanborn Fire Insurance Maps were obtained for the East 213th Street property location for the years 1918, 1935, 1951, 1978, 1983, 1986, and 1989. Inspection of several figures (copies found within Attachment C) were difficult due to poor map clarity. The 1918 map noted the subject and adjoining East 213th Street properties to be undeveloped. The 1935 figure identified the site to be improved with a two-story private dwelling (reportedly built circa-1920) and a detached private parking garage. Two additional garage buildings were illustrated on the 1951-1989 maps. Neighboring East 213th Street and Bronxwood Avenue properties were noted to have historically been used for residential (multi-family) purposes. None of the maps identified historic site use for commercial, industrial, or manufacturing purposes or the onsite presence of any underground petroleum storage tanks.

3.0 SITE INSPECTION

On January 31, 2012, TEAM conducted an inspection of accessible sections of the subject property. The authorized scope of work did not include performance of any field sampling activities (e.g., soil or groundwater) or completion of a formal regulatory compliance audit, as it

would relate to the use, storage, permitting, or disposal of regulated materials and waste products. A listing of Phase I ESA interview and information sources is presented as Attachment D.

3.1 Property Inspection

The inspection of accessible property areas (limited due to the presence of leaf litter, vegetation, and scattered debris) revealed no unusual odors or visual evidence of significant surface stains that could be indicative of leaking petroleum storage tanks, chemical spills, or industrial waste disposal. No PCB-labeled electrical equipment, aboveground petroleum or chemical storage tanks, suspected underground petroleum storage tank fill ports or vent pipes, unmarked waste storage drums/containers, potable water supply or groundwater monitoring wells, or industrial waste storage or disposal facilities within the property confines were observed.

No surface water bodies or freshwater wetland habitat areas were observed within or adjacent to the subject property confines. This was confirmed during review of a USGS topographic map. The authorized scope of work did not include performance of formal wetland or flood plain delineation surveys.

4.0 RECORDS REVIEW AND DOCUMENTATION

4.1 Regulatory Review - New York State Department of Environmental Conservation

The requested Phase I ESA time frame and scope of work precluded submittal of written Freedom of Information Legislation (FOIL) requests to the New York State Department of Environmental Conservation (NYSDEC) Region 2 Petroleum Bulk Storage Program, New York City Department of Environmental Protection, or City of New York Bureau of Fire Prevention.

4.2 Federal and State Environmental Database Report

TEAM has obtained an Environmental FirstSearch Network (EFSN) Site Assessment Report, which provides information concerning the target property and those sites located within an ASTM established radius and listed in any of the following Federal and State databases:

- National Priority List (NPL);
- Resource Conservation and Recovery Information System (RCRIS),
 - Large Quantity Generators and TSD Facilities,
 - Small Quantity Generators and Transporters;

- New York State/Tribal Brownfield Sites (BROWNFIELD);
- New York State Spills Database (SPILLS);
- Comprehensive Environmental Response, Compensation, and Liability System (CERCLIS);
- CERCLIS “No Further Remedial Action Planned” Sites (NFRAP);
- New York State Registry of Inactive Hazardous Waste Disposal Sites (STATE);
- Emergency Response Notification System (ERNS);
- New York Leaking Storage Tanks (LUST);
- New York State DEC Voluntary Cleanup Program (VCP);
- New York Active Solid Waste Facility Register (SWL); and
- New York Registered Bulk Storage Tanks (UST/AST).

The EFSN Database Report presented in Attachment E, identifies no NPL, CERCLIS, NFRAP, STATE, SWL, VCP, or BROWNFIELD sites within the ASTM established survey radius. One ERNS, eight LUST, and thirty-six SPILLS sites are found within a one-quarter mile distance. The nearest of these is a SPILLS site (private dwelling) located southeast of the target property at 939 Tilden Street. The Spill Date is listed as November 22, 2000 (“misdelivery” of fuel oil to basement level of residence - NYSDEC Spill No. 00-09616). The issued Spill Number is indicated to have been “closed” on January 16, 2001. The closest LUST site (unoccupied residence) is situated approximately 350-feet to the northwest at 839 East 214th Street. The Spill Date is identified as September 11, 2005 (reported No. 2 fuel oil tank failure - NYSDEC Spill No. 05-09613). The remedial status is noted to be “closed.” The ERNS site is found approximately 500-feet to the southeast between Bronxwood Avenue and Paudline Avenue. The Incident Date is shown as July 7, 2011 (individual at address reported to be “dumping motor oil and antifreeze directly onto the ground”).

As the subject property will be serviced with a municipal water supply, the proximity of EFSN identified sites would not appear to impact or pose significant environmental liabilities with respect to current residential site use or water quality issues. The 856 East 213th Street property is not identified within any of the EFSN accessed databases.

5.0 CONCLUSIONS

Based on the property setting and planned site use, availability of a municipal water supply, review of available information, performance of Phase I ESA interviews, and findings of the property walk-through inspection, no significant and immediate environmental liability issues or "recognized environmental conditions" associated with the 856 East 213th Street property were identified. No follow-up environmental site investigations are recommended at this time.

6.0 LIMITATIONS

The conclusions stated are based on the limits of the investigation described herein. TEAM can offer no assurances and assumes no responsibility for site conditions or activities which were outside the scope of the inquiry requested. It should be understood that TEAM has relied on the accuracy of documents, oral information, and other material and information provided by sources documented in this report. There can be no assurance, and TEAM offers no assurance, that site conditions do not exist or could not exist in the future which were undetected and which could lead to liability in connection with the site. Similarly, past and present activities on the site indicating potential environmental concerns may not have been discovered by TEAM's inquiries. TEAM was not authorized to perform any follow-up environmental field investigations pertaining to site observations and historic property use. The Phase I Environmental Site Assessment was prepared for reliance by 856 East 213 Street Associates, LLC.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.

Environmental FirstSearch Descriptions

NPL: EPA NATIONAL PRIORITY LIST - The National Priorities List is a list of the worst hazardous waste sites that have been identified by Superfund. Sites are only put on the list after they have been scored using the Hazard Ranking System (HRS), and have been subjected to public comment. Any site on the NPL is eligible for cleanup using Superfund Trust money.

A Superfund site is any land in the United States that has been contaminated by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

FINAL - Currently on the Final NPL

PROPOSED - Proposed for NPL

NPL DELISTED: EPA NATIONAL PRIORITY LIST Subset - Database of delisted NPL sites. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

DELISTED - Deleted from the Final NPL

CERCLIS: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM (CERCLIS)- CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL.

PART OF NPL- Site is part of NPL site

DELETED - Deleted from the Final NPL

FINAL - Currently on the Final NPL

NOT PROPOSED - Not on the NPL

NOT VALID - Not Valid Site or Incident

PROPOSED - Proposed for NPL

REMOVED - Removed from Proposed NPL

SCAN PLAN - Pre-proposal Site

WITHDRAWN - Withdrawn

NFRAP: EPA COMPREHENSIVE ENVIRONMENTAL RESPONSE COMPENSATION AND LIABILITY INFORMATION SYSTEM ARCHIVED SITES - database of Archive designated CERCLA sites that, to the best of EPA's knowledge, assessment has been completed and has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

NFRAP – No Further Remedial Action Plan

P - Site is part of NPL site

D - Deleted from the Final NPL

F - Currently on the Final NPL

N - Not on the NPL

O - Not Valid Site or Incident

P - Proposed for NPL

R - Removed from Proposed NPL

S - Pre-proposal Site

W – Withdrawn

RCRA COR ACT: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM SITES - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

RCRAInfo facilities that have reported violations and subject to corrective actions.

RCRA TSD: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM

TREATMENT, STORAGE, and DISPOSAL FACILITIES. - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984.

Facilities that treat, store, dispose, or incinerate hazardous waste.

RCRA GEN: EPA RESOURCE CONSERVATION AND RECOVERY INFORMATION SYSTEM GENERATORS - Database of hazardous waste information contained in the Resource Conservation and Recovery Act Information (RCRAInfo), a national program management and inventory system about hazardous waste handlers. In general, all generators, transporters, treaters, storers, and disposers of hazardous waste are required to provide information about their activities to state environmental agencies. These agencies, in turn pass on the information to regional and national EPA offices. This regulation is governed by the Resource Conservation and Recovery Act (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984. Facilities that generate or transport hazardous waste or meet other RCRA requirements.

LGN - Large Quantity Generators

SGN - Small Quantity Generators

VGN – Conditionally Exempt Generator.

Included are RAATS (RCRA Administrative Action Tracking System) and CMEL (Compliance Monitoring & Enforcement List) facilities.

Federal IC / EC: EPA BROWNFIELD MANAGEMENT SYSTEM (BMS) - database designed to assist EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant Programs.

FEDERAL ENGINEERING AND INSTITUTIONAL CONTROLS- Superfund sites that have either an engineering or an institutional control. The data includes the control and the media contaminated.

ERNS: EPA/NRC EMERGENCY RESPONSE NOTIFICATION SYSTEM (ERNS) - Database of incidents reported to the National Response Center. These incidents include chemical spills, accidents involving chemicals (such as fires or explosions), oil spills, transportation accidents that involve oil or chemicals, releases of radioactive materials, sightings of oil sheens on bodies of water, terrorist incidents involving chemicals, incidents where illegally dumped chemicals have been found, and drills intended to prepare responders to handle these kinds of incidents. Data since January 2001 has been received from the National Response System database as the EPA no longer maintains this data.

Tribal Lands: DOI/BIA INDIAN LANDS OF THE UNITED STATES - Database of areas with boundaries established by treaty, statute, and (or) executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation.

State/Tribal Sites: NYSDEC ENVIRONMENTAL SITE REMEDIATION DATABASE - database of sites being remediated under a DER remedial program/s (i.e. State Superfund, Brownfield Cleanup, etc.). This database also includes the Registry of Institutional and Engineering Controls in New York State.

REGISTRY OF INACTIVE HAZARDOUSE WASTE DISPOSAL SITES –

HAZARDOUS SUBSTANCE SITE STUDY - (STATIC) This study was done in 1998 and was prepared by the NY DEC, Hazardous Substances Waste Disposal Task Force In consultation with N.Y. Department of Health

State Spills 90: NYSDEC SPILL INCIDENTS DATABASE - database of chemical and petroleum spill incidents that occurred since 1990.

State/Tribal SWL: NYSDEC ACTIVE FACILITIES REGISTRY - database of solid waste landfill facilities. The data includes location, waste type, owner and permit number.

State/Tribal LUST: NYSDEC SPILL INCIDENTS DATABASE SUBSET - database of chemical and petroleum spill incidents where the cause was a tank test failure or tank failure

State/Tribal UST/AST: NYSDEC DATABASE OF PETROLEUM BULK STORAGE, MAJOR OIL STORAGE (MOSF), AND CHEMICAL BULK STORAGE (CBS) FACILITIES - database of petroleum or chemical storage facilities. The data includes status, tank type, capacity and contents. The data also includes

Nassau County Department of Health's PBS Tanks
Nassau County Fire Marshall's PBS Tanks
Suffolk County Department of Health Services PBS Tanks
Cortland County Health Department PBS Tanks
Rockland County Department of Health PBS Tanks
Westchester County Department of Health PBS Tanks.

State/Tribal EC: *NYSDEC* REGISTRY OF INSTITUTIONAL AND ENGINEERING CONTROLS Subset - database of sites from the Registry that have Engineering Controls.

State/Tribal IC: *NYSDEC* REGISTRY OF INSTITUTIONAL AND ENGINEERING CONTROLS Subset - database of sites from the Registry that have Institutional Controls.

State/Tribal VCP: *NYSDEC* VOLUNTARY CLEANUP PROGRAM - static database of voluntary clean up sites. The Brownfield Cleanup program has replaced the Voluntary Cleanup Program.

State/Tribal Brownfields: *NYSDEC* BROWNFIELD - database of old brownfield programs, brownfield cleanup programs, environmental restoration projects.

RADON: *NTIS* NATIONAL RADON DATABASE - EPA radon data from 1990-1991 national radon project collected for a variety of zip codes across the United States.

10.9.1 Decontamination Procedure

11.0 Key Personnel

12.0 Work Plan

12.1 Job objective / Detailed work plan

DT CONSULTING SERVICES, INC

1.0 INTRODUCTION

DT Consulting Services, Inc. (DTCS) has designed a safety and health program to provide its employees with the guidelines necessary to ensure their own safety and health as well as that of the surrounding community. The goal of this plan is to minimize the risk of injury during site investigative procedures including the advancement and sampling of soil cores along with soil gas sampling and groundwater monitoring.

2.0 ORGANIZATIONAL STRUCTURE

2.1 SAFETY AND HEALTH MANAGER

It is the responsibility of the safety and health manager to develop the comprehensive safety and health plan. The safety and health manager will be apprised of any changes in the comprehensive safety and health plan as well as all site-specific procedural determinations. The safety and health manager for this project will be Ms. Deborah Thompson.

2.1.1 RESPONSIBILITIES

- a) Initial site evaluation
- b) Hazard identification
- c) Determination of appropriate protection levels
- d) Conduct daily safety and health meetings
- e) Supervision of site sampling and monitoring
- f) Supervision of decontamination procedures
- g) Designate work zones to maintain site integrity

3.0 PERSONAL PROTECTIVE EQUIPMENT

The proper personal protective equipment is chosen by the site safety and health officer in consultation with the safety and health manager. The level of protection is dependent on the hazards that are likely to be encountered on-site.

3.1 PROTECTION LEVELS

DTCS utilizes four levels of protection as set forth in the OSHA guidelines, Appendix B of 1910.120.

DT CONSULTING SERVICES, INC

3.1.1 Level A

Level A provides the greatest level of skin, respiratory, and eye protection with the following minimum equipment:

- Full face, self-contained breathing apparatus (SCBA) or supplied air with escape SCBA
- Fully encapsulated chemical resistant suit
- Chemical resistant boots
- Chemical resistant inner and outer gloves

3.1.2 Level B

Level B provides the greatest level of respiratory protection, but a lower level of skin protection than Level A with the following minimum equipment:

- Full face SCBA or supplied air with escape SCBA
- Chemical resistant clothing
- Chemical resistant inner and out gloves
- Chemical resistant boots

3.1.3 Level C

Level C provides the same level of skin protection as Level B, but a lower level of respiratory protection with the following minimum equipment:

- Full face piece air purifying respirator with appropriate cartridge. Cartridges are chosen based on knowledge of hazardous material
- Chemical resistant clothing
- Chemical resistant inner and outer gloves
- Chemical resistant boots

3.1.4 Level D

Level D provides the lowest level of skin protection and no respiratory protection with the following minimum equipment:

- Coveralls
- Safety boots
- Gloves
- Safety glasses or splash goggles

4.0 WORK ZONES

DTCS utilizes the standard three-zone approach to site control. These zones are the exclusion zone, the contamination reduction zone and the support zone. Movement of personnel and equipment through these zones shall be strictly regulated in order to prevent contamination of clean environments and to protect workers in the support zone from possible exposure.

4.1 EXCLUSION ZONE

The exclusion zone is the area of highest contamination. All personnel entering this zone must wear the appropriate level of protection as prescribed in the site specific safety plan. The outer boundary of the exclusion zone, referred to as the Hotline, shall be determined based upon such considerations as; extent of surface contamination, safe distance in the case of fire or explosion, physical area necessary for workers to conduct operations in a safe manner and safe distance in the event of vapor or gas emissions. Upon determination, the Hotline shall be visibly marked and secured to prevent accidental entry by unauthorized personnel.

4.2 CONTAMINATION REDUCTION ZONE

The Contamination Reduction Zone is the area between the exclusion zone and the support zone. Its purpose is to protect the clean environment from contamination as workers enter and exit the exclusion zone. The outer boundary of this zone is referred to as the Coldline and shall be clearly marked. Decontamination stations shall be set up in this zone in a line known as the contamination reduction corridor. All personnel exiting the exclusion zone must follow the steps as prescribed in the decontamination procedures prior to re-entering the support zone.

4.3 SUPPORT ZONE

The support zone is the area furthest away from the exclusion zone. It is considered a clean, non-contaminated area where workers need not wear any protective equipment. The command post, equipment trailer, first aid station and lavatory facilities are all located in this area. This area is not, however, open to traffic. Only authorized personnel may enter.

5.0 AIR MONITORING

As the initial site evaluation work plan entails minimal site intrusive activities, specific air monitoring procedures would include only the periodic recording of total volatile organic compound or VOC concentrations with a Photoionization Detector (PID) or equivalent during site activities.

6.0 SITE COMMUNICATIONS

Various methods of communication will be employed based upon site conditions and work zones. Regardless of method of communication, personnel working in the exclusion zone will remain within constant view of support crews.

DTCS has a network of devices to aid in communications. All or some of the following devices may be used depending upon job site requirements; hand held radios, headset transistor walkie-talkies and cellular telephones.

The following hand signals shall be standardized for use in emergencies and in event of radio communication breakdown.

Hand gripping throat - out of air, can't breathe
Grip partner's wrist - leave area immediately
Hands on top of head - need assistance
Thumbs up - I am all right, okay
Thumbs down - no, negative

Horn blasts may be used to gain the immediate attention of crews to indicate that dangerous conditions exist.

7.0 EMERGENCY PROCEDURES

The following procedures shall be followed by all site personnel in the event of an emergency. Any changes to this procedure shall be noted in the site-specific plan. In all situations where there has been an evacuation of exclusion zone, reentry shall not be permitted until the following conditions have been met; the cause of the emergency has been determined and corrected, the site hazards have been reassessed, the safety plan has been reviewed and all personnel have been apprised of any changes.

7.1 INJURY IN THE EXCLUSION ZONE

In the event of an injury in the exclusion zone, the emergency signal shall be sounded. All personnel in the exclusion zone will assemble at the contamination reduction corridor. First aid procedures will begin on-site and if necessary, an ambulance will be called. No personnel will be allowed to re-enter the exclusion zone until the exact nature and cause of the injury has been determined.

7.2 INJURY IN THE SUPPORT ZONE

In the event of an injury in the support zone, on-site first aid procedures will begin immediately and an ambulance called if necessary. The site safety and health officer shall determine if the nature and cause of the injury or loss of the injured person will jeopardize the smooth running of the operations. If so, the emergency signal will be sounded and all personnel will follow the same procedure as outline above.

7.3 FIRE OR EXPLOSION

In the event of fire or explosion, the emergency signal shall be sounded and all personnel will assemble at the contamination reduction corridor. The fire department will be called and all personnel will be evacuated to a safe distance.

7.4 PROTECTIVE EQUIPMENT FAILURE

In the vent of protective equipment failure, the affected worker and his/her buddy will leave the exclusion zone immediately. In the event of any other equipment failure, the site safety and health officer will determine if this failure affects the operation. If so, the emergency signal will be sounded and all personnel will leave the exclusion zone until such time as it is deemed safe.

8.0 STANDARD SAFETY PRACTICES

The following guidelines will be followed by all personnel at all times; any changes must be approved by the safety and health manager.

- All employees will attend the daily safety meetings prior to site entry.

DT CONSULTING SERVICES, INC

- The buddy system will be utilized at all times.
- There will be no eating, drinking, smoking, or use of smoking material (i.e. matches) within the work area(s).
- Only authorized personnel will be allowed in designated work zones and will wear the proper personal protective clothing and equipment as prescribed in the site safety plan.
- The site safety and health officer will be appraised of any unusual circumstances immediately.

Such circumstances include but are not limited to the following; unusual odors, emissions, signs of chemical reaction, and discovery of conditions or substances not mentioned in the site safety plan. The site safety officer will then determine if these conditions warrant a shut down of operations.

9.0 DAILY SAFETY MEETINGS

Daily safety meetings will be conducted by the site safety and health officer prior to commencement of work. All personnel, regardless of job classification are required to attend.

9.1 DISCUSSIONS

1. Overview of safety and health plan.
2. Detailed discussion of substances of concern with emphasis on exposure limits, exposure symptoms and exposure hazards.
3. Review of standard safety precautions and work practices.
4. Review of work plan.
5. Review of hand signals and emergency signals.

Personnel will sign a daily attendance sheet, which shall include an overview of the topics discussed.

10.0 SITE SPECIFIC PLAN

DT CONSULTING SERVICES, INC

10.1 DETAILED SITE INFORMATION

- **Plan Date** TBA
- **Job Name** 856 East 213th Street
- **Client** 856 East 213 Street Associates, LLC
- **Client Contact/Phone Number**
Michael S. Froning – (914) 251-1374
- **Site Address** 856 East 213th Street
Bronx, New York
- **Cross Street** Bronxwood Avenue & Tilden Street
- **Site Access** Direct

10.2 CONTAMINANTS ON SITE/ACTION LEVELS

The following substances have the potential to exist on-site. The general primary hazards of each are identified, associated primarily with direct skin contact and inhalation.

SUBSTANCE	PRIMARY HAZARDS
<i>Volatile & Semi-Volatile Organics</i>	Eye, skin and respiratory irritation, nausea, vomiting, headache, liver, kidney, lung damage, sore throat, dizziness.
<i>PCBs</i>	Skin irritation, liver damage, fatigue, headaches, coughs, and unusual skin sores. Potential carcinogenic and non-carcinogenic effects.
<i>Pesticides</i>	Nausea, vomiting, diarrhea or stomach cramps. Headache, dizziness, weakness, or confusion. Excessive sweating, tearing, chills, or thirst. Chest pains. Breathing difficulties, body aches and muscle cramps.
<i>Metals</i>	Cough, weakness, eye, skin and throat irritation, abdominal pain, nausea, vomiting, headache, muscle aches, chills. Lung damage.

DT CONSULTING SERVICES, INC

Action Levels

Action levels shall be determined by monitoring of work zone breathing space with a portable Photoionization detector (PID) or comparable instrument. Measurement of a sustained concentration above ambient (background) conditions shall initiate action. The following criteria shall be used to determine appropriate action:

VOCs in Breathing Zone (sustained and above background)	Level of Respiratory Protection
0 – 5 ppm	Level D
5 – 200 ppm	Level C
200 – 1000 ppm	Level B - air line
1000+ ppm	Level B - SCBA

If the above criteria indicate the need to increase from Level D to a higher level of personal protection, all work in that particular site area will be immediately suspended until the required protective equipment is made available, or until Level D conditions return.

10.3 EMERGENCY INFORMATION

10.3.1 EMERGENCY RESPONDERS

10.3.1.1 HOSPITAL

Name: NY State Bronx State Hospital

Address & Telephone Number:

3050 White Plains Road, Bronx, NY
(718) 882-3328

Distance from Site: 0.93 Miles

10.3.1.2 EMERGENCY TELEPHONE NUMBERS

Police 911 on Cellular Phone
Fire 911 on Cellular Phone
Ambulance 911 on Cellular Phone

DT CONSULTING SERVICES, INC

10.3.1.3 REGULATORY AGENCIES

EPA Telephone Number 1-800-424-8802

NYSDEC Spills Hotline 1-800-457-7362

10.4 FIRST AID

First Aid available at the following stations:

First Aid Kit TRUCK

Emergency Eye Wash TRUCK & ON SITE

10.5 WORK ZONES

10.5.1 COMMAND POST

Command post will be mobile.

10.6 SITE COMMUNICATIONS

10.6.1 TELEPHONE

Command Post Telephone - Cellular Phone
Number (845)943-0159

10.6.2 HAND SIGNALS

12.0 WORK PLAN

12.1 JOB OBJECTIVE

The objective is to execute a Phase II Work Plan which includes soil, soil gas and groundwater sampling to delineate and quantify the extent of contamination (if any) on-site where the residential redevelopment is planned. This project will be under the management of New York City Office of Environmental Remediation (OER) for Hazardous Materials E-Designation Projects. Upon completion of field work, a Remedial Action Plan or RAP will be generated to address documented contamination, if encountered.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 21, 2012 and listed below. The project was identified as your project: **856 E 213th Street Associates**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

<u>York Sample ID</u>	<u>Client Sample ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>
12C0709-01	Soil Gas SG-1	Soil Vapor	03/20/2012	03/21/2012

General Notes for York Project (SDG) No.: 12C0709

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

- QL-02 This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
- E The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
-
- ND Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
- RL REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
- MDL METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
- NR Not reported
- RPD Relative Percent Difference
- Wet The data has been reported on an as-received (wet weight) basis
- Low Bias Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- High Bias High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
- Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on March 21, 2012 and listed below. The project was identified as your project: **856 East 213th Street Associates**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 12C0765

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data are acceptable.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL); therefore, the result is an estimated concentration.
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

ND	Analyte NOT DETECTED at the stated Reporting Limit (RL) or above.
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
MDL	METHOD DETECTION LIMIT - the minimum concentration that can be measured and reported with a 99% confidence that the concentration is greater than zero. If requested or required, a value reported below the RL and above the MDL is considered estimated and is noted with a "J" flag.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

Field Chain-of-Custody Record
