- Appendix E - Soil Boring Geologic Logs
- Appendix F – Monitoring Well Log
- Appendix G - Laboratory Data Deliverables for Soil, Groundwater and Soil Vapor

## LIST OF ACRONYMS

Acronym	Definition
AOC	Area of Concern
CAMP	Community Air Monitoring Plan
COC	Contaminant of Concern
CPP	Citizen Participation Plan
CSM	Conceptual Site Model
DER-10	New York State Department of Environmental Conservation Technical Guide 10
FID	Flame Ionization Detector
GPS	Global Positioning System
HASP	Health and Safety Plan
HAZWOPER	Hazardous Waste Operations and Emergency Response
IRM	Interim Remedial Measure
NAPL	Non-aqueous Phase Liquid
NYC VCP	New York City Voluntary Cleanup Program
NYC DOHMH	New York City Department of Health and Mental Hygiene
NYC OER	New York City Office of Environmental Remediation
NYS DOH ELAP	New York State Department of Health Environmental Laboratory Accreditation Program
OSHA	Occupational Safety and Health Administration
PID	Photoionization Detector
QEP	Qualified Environmental Professional
RI	Remedial Investigation
RIR	Remedial Investigation Report
SCO	Soil Cleanup Objective
SPEED	Searchable Property Environmental Electronic Database

# CERTIFICATION

I, Ray Kahn, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 335 Grand Concourse Site, (NYC VCP Site No. site number). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

Ray Kahn

Qualified Environmental Professional

Signature

# EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

## **Site Location and Current Usage**

The Site is located at 335 Grand Concourse in the Mott Haven section in Bronx, New York and is identified as Block 2345 and Lot 1 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 4937-square feet and is bounded by East 144<sup>th</sup> Street to the north, East 140<sup>th</sup> Street to the south, Grand Concourse to the east, and Walton Avenue to the west. A map of the site boundary is shown in Figure 3. Currently, the Site is used for an auto repair shop and contains a one- story building with no basement and four service bays.

## **Summary of Proposed Redevelopment Plan**

The proposed future use of the Site will consist of nine story hotel with a slab on grade. Layout of the proposed site development is presented in Figure 2. The current zoning designation is C6-2A which is a commercial/residential district. The proposed use is consistent with existing zoning for the property.

## **Summary of Past Uses of Site and Areas of Concern**

Based on the available Sanborn Maps dated from 2005 to 1891, the Site was developed after 1908 for use as a garage with 2-550 gallon USTs. From at least 1944 to 1981, the site was a filling station with 5 gas tanks and from 1984-2007 the site was listed as an auto repair without filling stations. Prior to October of 1980 the site was deeded to Texaco Inc. and in September of 2012 the site was deeded to GCH LLC,335 Grand Concourse from Enrique Pita.

The AOCs identified for this site include:

1. Area A – the area of the fill ports and where the anomalies were detected by the GPR. (SB-1)
2. Area B – historical fill conditions. (SB-2)

3. Area C - the proposed area where the elevator pit is to be installed. (SB-5, MW-1, SVP-2)
4. Area D – the area of the AST (SB-4, SVP-3)

### **Summary of the Work Performed under the Remedial Investigation**

ESPL performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected five soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed one groundwater monitoring wells throughout the Site to establish groundwater flow and collected one groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three soil vapor probes around Site perimeter and collected three samples for chemical analysis.

### **Summary of Environmental Findings**

1. Fairly flat with slight pitch from west to east
2. Depth to groundwater at the Site is 5 feet.
3. Since there was only one monitoring well installed on site, the exact groundwater flow direction is unknown, however, following the surface grade, groundwater will most probably flows from north west to south east.
4. Depth to bedrock is approximately 3 to 6 feet at the Site.
5. The stratigraphy of the site, from the surface down, consists of three feet of recycled concrete aggregate (RCA) and bedrock below.

6. Soil samples collected during remedial investigation were compared to the 6NYCRR Part 375-6.8 Track 1 - Unrestricted Use Soil Cleanup Objectives (UUSCOs) and Track 2 - Restricted Residential Soil Cleanup Objectives (RRSCOs). Soil/fill samples showed no VOC or PCBs detected above Unrestricted Use and Restricted Residential Use SCOs. One SVOC, benzo(b)fluoranthene at a concentration 1,100 ppb was detected above Unrestricted and Restricted Residential SCOs in one one sample. Metals including copper (max. of 491 ppm), mercury (max. of 0.19 ppm), zinc (max. of 457 ppm), nickel (max. of 110 ppm) and lead (max. of 308 ppm) exceeded their respective Unrestricted Use SCOs. Of these metals, copper also exceeded Restricted Residential Use SCOs. Pesticides including 4,4' -DDT at a concentration of 29 ppb and 4,4' -DDE at a concentration of 11 ppb, exceeded Unrestricted Use SCOs in one sample, well below its Restricted Residential SCOs. Overall, soil chemistry is unremarkable and does not indicate any disposal condition.
7. Groundwater sample collected during the RI was compared to NYSDEC Part 703.5 Groundwater Quality Standards (GQS). Groundwater results showed no VOC, SVOCs, PCBs or pesticides at detectable concentrations. Several dissolved metals were identified, but only iron exceeded its GQSs. The RI results indicate that groundwater has not been impacted by site conditions.
8. Soil vapor samples collected during the RI was compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion. Several petroleum related and chlorinated VOCs were detected in soil vapor samples collected during the RI . Soil vapor samples showed petroleum related and associated derivatives in all three soil vapor samples. Highest reported concentrations were for acetone ( $1010 \mu\text{g}/\text{m}^3$ ), 1,3,5-Trimethylbenzene ( $590 \mu\text{g}/\text{m}^3$ ), and p-&m- xylene ( $1010 \mu\text{g}/\text{m}^3$ ). Petroleum related VOCs included BTEX compounds that were found throughout the Site, with the highest concentration at  $1,160 \mu\text{g}/\text{m}^3$ . Chlorinated VOCs including tetrachloroethylene (PCE) was detected in all three of the soil vapor samples at a maximum concentration of  $53 \mu\text{g}/\text{m}^3$ . Trichloroethylene was also detected in all three of the soil vapor samples at a maximum concentration of  $39.1 \mu\text{g}/\text{m}^3$ . Carbon Tetrachloride was detected in all three of the soil vapor samples at a maximum concentration of 22.6

ug/m<sup>3</sup>. TCA was not detected. TCE concentrations are above the monitoring level range established by NYSDOH guidance matrix.

# REMEDIAL INVESTIGATION REPORT

## 1.0 SITE BACKGROUND

GCH LLC has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.11-acre site located at 335 Grand Concourse in Mott Haven section of Bronx, New York. A nine story hotel is proposed for the property. The RI work was performed between April 29, 2014 and May 15, 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

### 1.1 Site Location and Current Usage

The Site is located at 335 Grand Concourse in the Mott Haven section in Bronx, New York and is identified as Block 2345 and Lot 1 on the New York City Tax Map. Figure 1 shows the Site location. The Site is 4,937-square feet and is bounded by East 144<sup>th</sup> Street to the north, 140th Street to the south, Grand Concourse to the east, and Walton Avenue to the west. A map of the site boundary is shown in Figure 3. Currently, the Site is used for an auto repair shop and contains a one- story building with no basement and four service bays.

### 1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of nine story hotel with a slab on grade. Layout of the proposed site development is presented in Figure 2. The current zoning designation is C6-2A which is a commercial/residential district. The proposed use is consistent with existing zoning for the property.

### 1.3 Description of Surrounding Property

The surrounding area is a mixed commercial and residential. The zoning for the surrounding area is C6-2A, M1-4/R6A, C4-4 and M1-2. To the north there is the All-City Corporate Transportation, which is mainly offices, the south is LMC Car Wash and Lube, the east is a mix of auto repair shops, medical care and rehabilitation, and NY Taxi Equipment and Upholstery and to the west are several multi-story commercial buildings.

Figure 1 shows the surrounding land usage.

## **2.0 SITE HISTORY**

### **2.1 Past Uses and Ownership**

Based on the available Sanborn Maps dated from 2005 to 1891, the Site was developed after to 1908 for use as a garage with 2-550 gallon USTs. From at least 1944 to 1981, the site was a filling station with 5 gas tanks and from 1984-2007 the site was listed as an auto repair without filling stations. Prior to October of 1980 the site was deeded to Texaco Inc. and in September of 2012 the site was deeded to GCH LLC,335 Grand Concourse from Enrique Pita.

### **2.2 Previous Investigations**

The Phase I report was prepared by Hydro Tech Environmental Corp. for Mr. Sanjay Patel dated February 3, 2012. This Phase I identified five recognized environmental conditions (RECs):

1. The suspected presence of USTs in the southern service bay.
2. The presence of in-ground hydraulic lifts.
3. The presence of significant petroleum staining atop the asphalt in poor condition.
4. The presence of E-Designation.
5. The former use of the property as a gasoline station.

The Phase II Environmental Site Assessment was prepared by Hydro Tech Environmental Corp. for Mr. Sanjay Patel dated March 27, 2012.

1. Elevation of the property above mean sea level is approximately 50 feet.
2. Depth to groundwater ranges from 10 to 20 feet below grade at the Site.
3. Groundwater flow is generally southwest to the Harlem River beneath the Site.
4. Soil/fill samples collected during the Phase II Investigation were analyzed for VOC and SVOCs only. Seven SVOCs were detected within the shallow samples collected from the historic fill layer, from 2-4 feet, at concentrations above their Track 2 Restricted Residential SCOs. These SVOCs were all PAH compounds and their concentrations and distribution indicate that they are associated with historic fill material observed in shallow samples.

5. Groundwater samples collected during the Phase II Investigation were analyzed for VOC and SVOCs only. The only VOC identified in groundwater was cis-1,2-dichloroethane, hexachlorobutadiene, and toluene, which was identified below its GQS. Only Hexachlorobutadiene was detected above its GQS at 3.58 ug/l. The only SVOC identified in groundwater was 2,4-diniyrotoluene at 12.5 ug/l, above the GQS. The RI indicates that groundwater is not impacted by site conditions and that the water encountered may be perched water since the VOC and SVOC encountered were not identified in any soil samples.

A geophysical survey was conducted at the site and several anomalies were encountered at the site suggesting the presence of underground storage tanks. A UST Closure Affidavit, dated January 21, 2014 by Mercury Tank & Pump Services, Inc. indicated the closure and removal of twelve 550 gallon USTs from the site.

UST Closure Affidavit dated January 21, 2014, prepared by Mercury Tank & Pump Services, Inc. indicated that twelve 550 gallon UST had been removed from the site.

### **2.3 Site Inspection**

The visual inspection of the subject site revealed evidence of chemical/petroleum staining within several areas of the shop. Based on the finding of the Phase I ESA, Sanborn maps, GPR Survey, and the joint site inspection with the office of OER the areas of concern were identified. Using the site background and the neighboring sites, the number of soil, groundwater and soil vapor samples were identified.

### **2.4 Areas of Concern**

The AOCs identified for this site include:

1. Area A – the area of the fill ports and where the anomalies were detected by the GPR. (SB-1)
2. Area B – historical fill conditions. (SB-2)
3. Area C - the proposed area where the elevator pit is to be installed. (SB-5, MW-1, SVP-2)
4. Area D – the area of the AST (SB-4, SVP-3)

Phase 1 Report is presented in Appendix C. A map showing areas of concern is presented in Figure 3.

## **3.0 PROJECT MANAGEMENT**

### **3.1 Project Organization**

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Ray Kahn, P.E..

### **3.2 Health and Safety**

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

### **3.3 Materials Management**

All material encountered during the RI was managed in accordance with applicable laws and regulations.

## **4.0 REMEDIAL INVESTIGATION ACTIVITIES**

ESPL performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the entire project Site, and collected five soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed one groundwater monitoring wells throughout the Site to establish groundwater flow and collected one groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed three soil vapor probes around Site perimeter and collected three samples for chemical analysis.

### **4.1 Geophysical Investigation**

A geophysical survey was not performed since it was previously conducted as part of the Phase II Environmental Site Assessment in March of 2012 by Hydro Tech Environmental, Corp.

### **4.2 Borings and Monitoring Wells**

#### **Drilling and Soil Logging**

Soil borings were installed utilizing a auger rig outfitted with a macro-core sampler and dedicated acetate liners. Soils were collected continuously from ground surface to 3 feet bgs. Soils were field-screened for the presence of VOCs using a PID and were visually inspected for evidence of contamination. No elevated PID readings or visual/ olfactory evidence of contamination were identified. Drilling equipment (i.e., split spoon samplers, rods, etc.) and non-dedicated sampling equipment was thoroughly washed with Alconox and water, using a brush to remove particulate matter or surface film, followed by a thorough rinsing with tap water, followed by a distilled water rinse and allowed to air dry before commencement of drilling activities and between boring locations and sampling intervals. Soil samples at each boring location were collected in 2' intervals from grade to final termination depth of each boring.

Boring logs were prepared by a geotechnical engineer are attached in Appendix E. A map showing the location of soil borings and monitor wells is shown in Figure 3.

### Groundwater Monitoring Well Construction

A permanent 2-inch diameter monitoring well with a 10-feet of screen was deployed from 17 feet bgs were installed at the location shown as MW-1 in Figure 3, and the casing extended from the screen to grade. Sand pack was installed in the annular space from about one foot below the bottom of the monitoring well to approximately one to three feet above the top of the well screen. The annulus was then filled with bentonite slurry. Concrete slurry mix was used from the top of the bentonite seal to install the flush mounted locking steel casing. Monitor well locations are shown in Figure 3.

### Survey

The following table indicates the location of the soil boring, monitoring wells and soil vapor probes.

**Table for Construction Details for Soil Borings and Monitoring Wells**

	Identification Number	Date of construction	Total Depth (feet)	Diameter (inch)	Screened interval (Elevation Range feet)	Construction Material (PVC, steel, etc)	GPS Coordinates
Soil Borings	SB-1	4-29-2014	4	2	N/A	N/A	12°E,12°S
	SB-2	4-29-2014	4	2	N/A	N/A	22°E,68°S
	SB-3	4-29-2014	4	2	N/A	N/A	42°E,48°S
	SB-4	4-29-2014	4	2	N/A	N/A	45°E,14°S
	SB-5	4-29-2014	4	2	N/A	N/A	24°E,32°S
Monitor Wells	MW-1	5-15-2014	17	2	0-7 Solid Riser 7-17 screen	PVC	30°E,40°S

## **Water Level Measurement**

An oil/water interface probe, cotton string and disposable bailers were used to detect the presence of any floating products as well as water level measurement in the well. The well was then purged using a peristaltic pump with dedicated polyethylene tubing. Three to five well casing volumes of standing water were removed from each well until the turbidity was cleared prior to sample collection. Water level data is included in Section 5.1.

### **4.3 Sample Collection and Chemical Analysis**

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

### **Soil Sampling**

The soil borings were advanced to a maximum depth of 3 feet bgs using an auger rig. Soil samples were collected directly from two-foot macro-core samplers. The visual inspection of the samples was immediately performed and field logs were prepared. All samples were screened using handheld MiniRAE 2000 and the readings were logged. Discrete grab soil samples from the sampling interval 2-3 feet bgs were collected. Samples were placed into laboratory supplied sample bottles, labeled and stored on site in a cooler. One soil sample from each boring was submitted to a NYSDOH ELAP-certified laboratory for analysis. The soil samples were analyzed for the presence of Volatile Organic Compounds (VOC) using EPA Method 8021/8260, Semi-volatile Organic Compounds (SVOC) using EPA Method 8270, Metals using EPA Method 6010, Pesticides using EPA Method (8081) and Polychlorinated Biphenyls (PCBs) using EPA Method 8082. Soil analytical results were compared to NYSDEC's Unrestricted Use Soil Cleanup Objectives (SCOs) and Restricted Residential Use SCOs.

Five soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 1-5. Figure 3 shows the location of samples collected in this investigation. Laboratories and analytical methods are shown below.

### **Groundwater Sampling**

ESPL collected one (1) groundwater sample from borings MW-1 using a peristaltic pump on May 15, 2014. Non-dedicated sampling equipment was decontaminated prior to the collection of each sample. Following stabilization of the field parameters, groundwater was carefully poured from the discharge tubing into laboratory-supplied sample containers. Groundwater sample was labeled, and analyzed for the presence of VOC, SVOC, TAL Metals PCBs, and Pesticides. The groundwater sample analytical results were compared to the NYSDEC Class GA Groundwater Quality Standards, Technical and Operational Guidance Series (TOGS) 1.1.1, Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations, (NYSDEC, June 1998).

One groundwater sample was collected for chemical analysis during this RI. Groundwater sample collection data is reported in Tables 6-10. Sampling logs with information on purging and sampling of groundwater monitor well is included in Appendix F. Figure 3 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

### **Soil Vapor Sampling**

The soil vapor probes were advanced utilizing a drill to a depth of 3 feet bgs. The soil vapor probe consisted of a 1/8" diameter polyethylene tubing to the surface and was sealed at grade with a cement-bentonite mixture. A helium enriched atmosphere was created in the immediate vicinity of the area where the probe intersects the ground surface. The tracer gas (helium) was utilized during purging and sampling collection activities to serve as a quality assurance/quality control measure to verify the integrity of the soil vapor probe seal, and that adequate sampling technique are being implemented. One to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow control valve on each canister in turn.

Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approx. 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

Three soil vapor probes were installed and three soil vapor samples were collected for chemical analysis during this RI. Soil vapor sampling locations are shown in Figure 3. Soil vapor sample collection data is reported in Table 11. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

### Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

<b>Factor</b>	<b>Description</b>
Quality Assurance Officer	The chemical analytical quality assurance is directed by Margaret Tavares
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and were Phoenix Environmental Laboratories, Inc.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> <li>• TAL Metals by EPA Method 6010C (rev. 2007);</li> <li>• VOCs by EPA Method 8260C (rev. 2006);</li> </ul>

	<ul style="list-style-type: none"> <li>• SVOCs by EPA Method 8270D (rev. 2007);</li> <li>• Pesticides by EPA Method 8081B (rev. 2000);</li> <li>• PCBs by EPA Method 8082A (rev. 2000);</li> </ul> <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> <li>• VOCs by TO-15 VOC parameters..</li> </ul>
--	---

### Analytical Methods Summary Table

Matrix	Number of Samples	Analytical parameters measured	Analytical methods	Number of duplicate samples	Number and type of QA/QC samples
Soil	5	TAL Metals VOCs SVOCs Pesticides PCBs	EPA Method 6010C EPA Method 8260C EPA Method 8270D EPA Method 8081B EPA Method 8082A	0	0
Groundwater	1	TAL Metals VOCs SVOCs Pesticides PCBs	EPA Method 6010C EPA Method 8260C EPA Method 8270D EPA Method 8081B EPA Method 8082A	0	1
Soil vapor	3	VOCs	TO-15 VOC	0	0

### Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1-11, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix G.

## 5.0 ENVIRONMENTAL EVALUATION

### 5.1 Geological and Hydrogeological Conditions

#### Stratigraphy

The lithologic description of the sediments from soil borings advanced during this investigation at the site identifies heterogeneous RCA across most of the site mixed with silty sand with rock fragments to a depth of 4 feet bgs.

#### Hydrogeology

A table of water level data for all monitor wells is included below. The average depth to groundwater is 4.3 fbgs.

**Table for Groundwater Level Data**

Monitoring Well ID No.	Date	Water Elevation
MW-1	5/15/2014	4.3 fbgs

### 5.2 Soil Chemistry

Soil samples collected during remedial investigation were compared to the 6NYCRR Part 375-6.8 Track 1 (Unrestricted Use SCOs) and Track 2 (Restricted Residential SCOs). Soil/fill samples showed no VOC or PCBs detected above Unrestricted and Restricted Residential SCOs. One SVOC, benzo(b)fluoranthene (max. concentration 1,100 ppb) was detected above Unrestricted and Restricted Residential SCOs in one sample, SB1 (2-3) collected from Area A, the area where the fill ports were encountered. Metals including copper (max. concentration 491 ppm), mercury (max. concentration 0.19 ppm), zinc (max. concentration 457 ppm), nickel (max. concentration 110 ppm) and lead (max. concentration 308 ppm) exceeded their respective Unrestricted Use SCOs. Of these metals, copper also exceeded Restricted Residential Use SCOs.. Pesticides including 4,4' -DDT (max. concentration 29 ppb) and 4,4' -DDE (max. concentration 11 ppb) , exceeded Unrestricted Use SCOs in one sample, well below its Restricted Residential SCOs.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed

on soil samples is included in Tables 1-5. Figure 4 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Track 2 Soil Cleanup Objectives.

### **5.3 Groundwater Chemistry**

Groundwater sample collected during the RI was compared to NYSDEC Part 703.5 Groundwater Quality Standards (GQS). Groundwater results showed no VOC, SVOCs, PCBs or pesticides at detectable concentrations. Several metals were identified, but only iron exceeded its GQS in dissolved water samples. The RI indicates that groundwater has not been impacted by site conditions.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6-10. Exceedance of applicable groundwater standards are shown.

Figure 4 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

### **5.4 Soil Vapor Chemistry**

Soil vapor results collected during the RI were compared to the compounds listed in Table 3.1 Air Guideline Values Derived by the NYSDOH located in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion dated October 2006. Soil vapor samples showed petroleum related and associated derivatives in all three soil vapor samples. BTEX compounds were found throughout the Site, with the highest concentration at 1,160  $\mu\text{g}/\text{m}^3$ . Highest reported concentrations were for acetone (1010  $\mu\text{g}/\text{m}^3$ ), 1,3,5-Trimethylbenzene (590  $\mu\text{g}/\text{m}^3$ ), and p-&m- xylene (1010  $\mu\text{g}/\text{m}^3$ ). Chlorinated hydrocarbons were detected in all three soil vapor samples. Tetrachloroethylene (PCE) was detected at a maximum concentration of 53  $\mu\text{g}/\text{m}^3$  and trichloroethylene (TCE) was detected at a maximum concentrations of 9.9  $\mu\text{g}/\text{m}^3$ . Carbon tetrachloride was detected at 22  $\mu\text{g}/\text{m}^3$  and TCA was not detected in soil vapor samples. TCE concentrations are above the monitoring level range established by NYSDOH guidance matrix.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11.

Figure 5 shows the location and posts the values for soil vapor samples with detected concentrations.

### **5.5 Prior Activity**

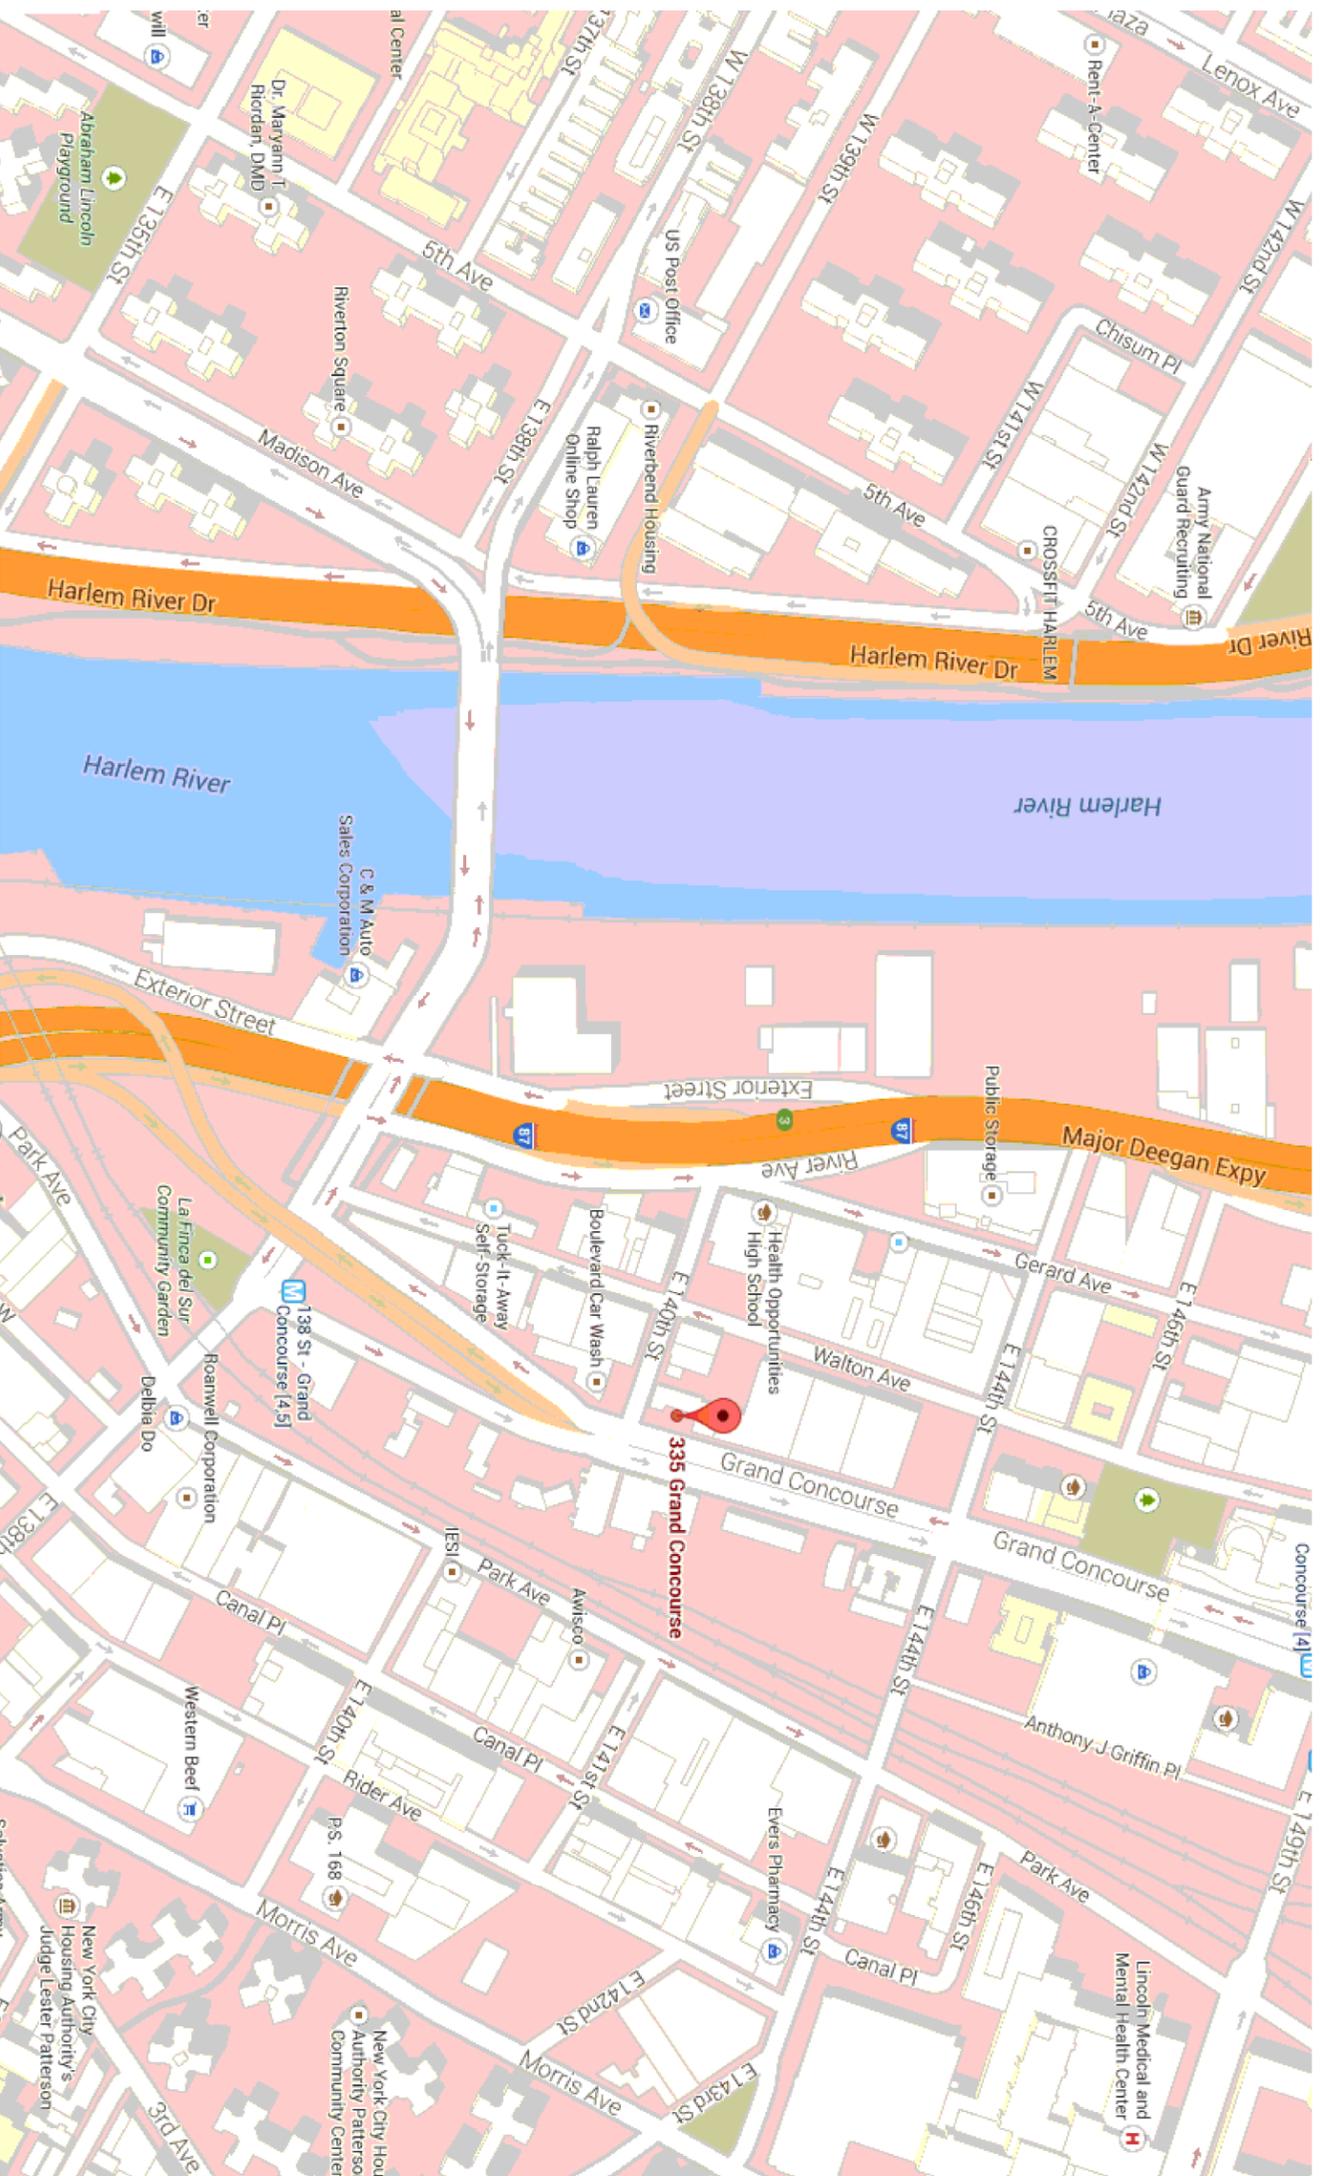

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

### **5.6 Impediments to Remedial Action**

There are no known impediments to remedial action at this property.

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

**335 Grand Concourse  
Bronx, NY**

**Prepared For**

Mr. Sanjay Patel

**February 3, 2012**

**Job No. 120006**

**PHASE I ENVIRONMENTAL SITE ASSESSMENT**

**335 Grand Concourse  
Bronx, NY**

**February 3, 2012**

Hydro Tech Environmental, Corp. appreciates the opportunity to work for Mr. Sanjay Patel at the property located at 335 Grand Concourse in the Bronx, New York.

Should you require any additional information or have any comments regarding the contents of this report, please feel free to contact our office at your convenience.

We declare that, to the best of my professional knowledge and belief, HYDRO TECH personnel meet the definition of an environmental professional as defined in §312.10 of 40 C.F.R. 312, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

Very Truly Yours,  
**Hydro Tech Environmental, Corp.**

## **1.0 EXECUTIVE SUMMARY**

Hydro Tech Environmental, Corp. (Hydro Tech) has performed a Phase I Environmental Site Assessment (Phase I ESA) at the Subject Property. The Phase I ESA was performed to meet or surpass the American Standard of Testing Materials Standard for Phase I Environmental Site Assessments E 1527-05. The purpose of the assessment was to characterize the environmental quality of the Subject Property through the identification of Recognized Environmental Conditions (RECs). All work was performed under the supervision of a Hydro Tech Project Manager and under the guidance of a Hydro Tech geologist.

The results of the Phase I Environmental Site Assessment are contained in this report. The Phase I Environmental Site Assessment has revealed the following REC(s):

- The suspected presence of underground storage tanks (§4.0).
- The presence of an in-ground hydraulic lift (§4.0).
- The presence of significant petroleum staining atop of asphalt in poor condition (§4.0).
- The presence of E Designation (§5.0).
- The former use of the property as a gasoline station (§5.0).

No effort has been made to perform any investigation beyond what is included in this Report. The observations and conclusions included herein summarize the results of the Phase I Environmental Site Assessment up to the date of the fieldwork and the date of this Report.

The following sections provide the details and specific information pertaining to the various components of the Phase I Environmental Site Assessment.

## **2.0 INTRODUCTION & SCOPE OF WORK**

### **2.1 Introduction**

Hydro Tech Environmental, Corp. (Hydro Tech, the “**Preparer**”) has been retained by Mr. Sanjay Patel (the “**User**”) to perform a Phase I Environmental Site Assessment at the property located at 335 Grand Concourse in the borough of the Bronx, New York. The User is the owner of the property. The property will hereafter be referred to as the “**Subject Property**” or “**Site**”.

The purpose of a Phase I Assessment is to characterize the environmental quality of the Subject Property through the determination of the presence of Recognized Environmental Conditions (RECs). As defined by the American Society of Testing and Materials (ASTM), a REC is, “the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater or surface water of the property” (ASTM E 1527-05, §1.1.1). Similarly, the goal of an AAI-compliant Phase I Assessment is to identify “conditions indicative of releases or threatened releases of hazardous substances...” (40 CFR Part 312).

To this end, Hydro Tech has collected information through a number of sources including, but not limited to: a property and neighborhood inspection by trained environmental personnel, a review of historical and current information collected from various federal, state, county and municipal agencies and personnel interviews with Site representatives. Recommendations are offered where prudent. Firms subcontracted by Hydro Tech and the User may have collected some information used in this report. Some or all of the Assessment has been performed or supervised by environmental professionals as required by 40 CFR Part 310. The procurement of Title and Judicial Records for Environmental Liens and/or Activity and Use Limitations (“AULs”) by Hydro Tech is beyond the scope of this practice (ASTM E1527-05) and investigation.

### **2.2 Scope of Work**

The general activities of the Phase I Assessment included the performance of the following tasks:

1. A detailed inspection of the Site and its general vicinity.
2. A review of all reasonably ascertainable regulatory agency documents.
3. A neighborhood hazardous waste survey utilizing Federal and State databases.
4. A review and evaluation of reasonably ascertainable geologic and hydrogeologic reference materials.
5. Interviews with representatives of the Site.
6. The preparation of a Phase I Environmental Site Assessment Report.

The Phase I ESA was performed in accordance with ASTM E 1527 except where noted in Section 2.3 and in Hydro Tech’s Proposal. As required by ASTM, the User has supplied information that has been relied upon by Hydro Tech in the rendering of findings, conclusions and opinions, except where indicated in Section 2.3 or elsewhere in the report.

### **2.3 Limitations, Deviations and Exceptions**

In addition to those items outlined by ASTM E 1527, asbestos, radon, lead-based paint and lead in water were also considered in the scope of work. While this Phase I Assessment provides information with respect to both asbestos and lead-based paint, the presence of these materials can only be confirmed through the collection and analysis of bulk samples.

This report is not intended to serve as a full asbestos survey or lead-based paint survey. These surveys are commonly performed for the purpose of building demolition/renovation or the recognition/identification of any building materials that may contain asbestos or lead-based paint and it is recommended that they be performed prior to any such work.

Business Environmental Risks have not been considered and are not included in the scope of work. This Phase I Assessment is not intended to address the soil/groundwater quality at the Subject Property for general site characterization or waste disposal purposes. This Phase I Assessment is not intended to evaluate the fair market price of the property if it is not affected by hazardous or petroleum products.

Portions of this report have been prepared utilizing information provided by third party sources or the user. As such, Hydro Tech relies upon these sources and has recorded findings, conclusions and opinions based upon this information. Hydro Tech cannot attest to the accuracy of this information but where possible had attempted to verify the information.

This Phase I ESA Report is not intended to serve or be construed as a regulatory compliance report for the property. No legal opinions are provided with this report. This Phase I is not intended to address soil vapor intrusion conditions.

It should be noted that the USEPA has determined in their final ruling (40 C.F.R. Part 312, Standards and Practices for All Appropriate Inquiries) of November 1, 2005 that "persons conducting all appropriate inquiries may use the procedures included in the ASTM E 1527-05 standard to comply with today's final rule." Therefore, while all appropriate inquiry could be considered satisfied as this ESA was prepared as per the ASTM E 1527-05 Standard, person(s) attempting to utilize this ESA while seeking one of CERCLA's LLPs must note that; a) they will not maintain CERCLA liability protections unless they also comply with all of the continuing obligations established under the statute that are beyond the scope of this practice (ASTM E 1527-05) and investigation; and b) in order to qualify for one of the CERCLA LLPs, the person(s) commissioning the Phase I Environmental Site Assessment must have provided site-specific information (if available) to Hydro Tech before the date of this ESA, otherwise a determination could be made that all appropriate inquiry is not complete.

### 3.0 SUBJECT PROPERTY DESCRIPTION

#### 3.1 Subject Property Vicinity

The property is located at the intersection of Grand Concourse and East 140<sup>th</sup> Street in the borough of the Bronx, NY. The Borough of the Bronx is situated in the northern portion of the City of New York. The Harlem River is located approximately 800 feet to the southwest of the Site.

The vicinity of the Subject Property consists of commercial and residential properties. The ground surfaces in the vicinity of the Subject Property consist of concrete and asphalt surfaces.

#### 3.2 Subject Property Description

The Site is 4,937 square feet in area and contains a 1-story commercial building with no basement. The building is located in the western portion of the property and is occupied by an auto repair facility named Eli Auto Repair. The remaining portions of the property are asphalt and concrete surfaces. Four service bays are located in the northern portion of the building. An office is located in the central portion of the building and one service bay is located in the southern portion of the building.

Various auto parts are situated in the northern portion of the building. Several automobiles are parked throughout the eastern and southern portion of the property. A metal fence is situated along the eastern property boundary. An aboveground electric auto lift is situated in the southern portion of the property.

The Site is connected to the NYC municipal sewer system, water, electric and gas services. These services enter the Site underground along Grand Concourse.

The topography of the Subject Property and is generally level. The topography in the vicinity of the Site has a slight slope toward the south and west. **Figure 1** provides a Site Plan.

#### 3.3 Adjacent Land Use

The Subject Property is located in a commercial area. The following properties were identified immediately adjacent to the Subject Property:

Direction	Adjacent Parcel	Surrounding Parcels
North	All-City Corporate Transportation (offices)	Commercial/Residential
South	LMC Car Wash & Lube	
East	Teddy's Auto Repair, NY Taxi Equipment & Upholstery, vacant commercial, Medical Care & Rehabilitation	
West	Multi-story commercial (unknown)	

Hydro Tech does not believe that the adjacent properties identified above should impact upon the environmental quality of the Subject Property.

#### 3.4 Proximity to Environmentally Sensitive Areas

The results of the Site inspection and an evaluation of the United States Geological Survey (USGS) 7-½ Minute Topographic Map containing the properties indicate there are no environmentally sensitive areas located within ¼ mile radius of the Subject Property.

### **3.5 Site Location and Physical Setting**

The Subject Property is located in the southwestern portion of the Borough of Bronx, New York. The elevation of the Subject Property is approximately 50 feet above mean sea level (USGS 7.5-Minute Bronx, New York Quadrangle, 1969, Photorevised 1979).

The vicinity of the Subject Property is characterized by metamorphosed sequence of bedrock known as the Manhattan Prong of the Hartland Formation.

The Hartland Formation was formed during the late Cambrian to early Ordovician period and consists of undivided pelitic schist with gneiss and amphibolite. The formation is frequently cross cut by transverse and parallel faults. The area is overlain by Pleistocene aged glacial till deposits.

Outcrops of bedrock are common place in the Bronx. However, no areas of exposed bedrock were identified during the Site inspection.

The depth to water in the vicinity of the Subject Property is estimated to be 10 to 20 feet. The regional groundwater flow direction in the vicinity of the Site is presumed to be toward the southwest in the direction of the Harlem River.

#### 4.0 SITE RECONNAISSANCE

Mark E. Robbins of Hydro Tech performed the site reconnaissance portion of the Phase I Assessment on January 13, 2011. The weather during the inspection was sunny, approximately 45 degrees Fahrenheit. **Appendix A** provides photographs obtained during the site reconnaissance.

The site inspection was limited due to the disrepair of the building. The following pertinent information was obtained during the Subject Property Reconnaissance:

1. Industrial Processes:

- No industrial processes were observed at the Subject Property. No evidence of historical industrial processes was observed at the Subject Property.

2. Suspect Asbestos-Containing Materials:

- No visual evidence of suspect asbestos-containing material was identified at the Subject Property.

3. Suspect Lead-Based Paint:

- No evidence of peeling paint was identified at the Subject Property.

4. Drum Storage Areas:

- No current or former drum storage areas were observed at the Subject Property.
- Several drums of petroleum are present in the 3 service bays. Petroleum staining was observed in the vicinity of the drums and atop the drums. The concrete surface in the vicinity of the drums is in good to fair condition. The staining appears to be reflective of poor housekeeping and should not impact upon the environmental quality of the Subject Property.

5. Storage Tanks:

- A 275-gallon aboveground waste oil tank is located in the northern portion of the property. The waste oil AST is in fair condition; petroleum staining was observed atop the AST. No stains, odors or evidence of spills were observed in the vicinity of the AST. The waste oil AST should not impact upon the environmental quality of the Subject Property.
- A fill port for a heating oil tank is located beneath the floor of the southern service bay. The word "oil" is painted on the concrete floor next to the fill port. A vent pipe is located along the southern exterior wall of the building. No stains, odors or evidence of spills were noted in the vicinity of the fill port or vent pipe.
- A concrete pad indicative of underground storage tank(s) was observed in the eastern portion of the property. Several concrete filled fill ports were observed within the footprint of the concrete pad; the total number of former fill ports was unable to be determined due to the presence of parked cars. Five vent pipes were observed through the western roof of the building.

The presence of the concrete pad, current and former fill ports and vent pipes is indicative of underground storage tanks and should be considered a REC.

6. Subsurface Drainage Structures/Drains:

- No subsurface drainage structures, such as leaching pools, cesspools or drywells were observed at the Subject Property. No evidence of former subsurface drainage structures were observed at the Subject Property.

No floor drains were identified at the Subject Property.

7. PCB-Containing Equipment:

- A hydraulic in-ground lift is present in the 3 service bays. The in-ground lift is in working condition. No staining was observed in the vicinity of the piston. Due to the storage of hydraulic oil, the presence of the in-ground lift should be considered a REC.
- Other than fluorescent light ballast(s), no other PCB-containing equipment was identified at the Subject Property.

8. Monitoring / Potable Water Wells:

- No monitoring wells were identified at the Subject Property. No monitoring wells were identified on the adjacent properties. The Subject Property does not utilize wells for the generation of potable water.

9. Mold

- No visual evidence of mold was identified at the Subject Property.

10. Pits, Ponds, or Lagoons:

- No waste disposal pits, ponds, or lagoons were observed at the Subject Property. No evidence of former pits, ponds, or lagoons was observed at the Subject Property.

11. Distressed Vegetation:

- No distressed vegetation was observed at the Subject Property.

12. Fill / Land Disposal:

- No visual areas of fill or evidence of land disposal of material(s) were observed at the Subject Property.

13. Engineering Controls:

- No visual evidence of engineering controls were noted at the Subject Property.

14. Odors:

- No odors indicative of a petroleum, chemical or hazardous substance spill or release were identified at the Subject Property.

15. Hazardous Substance / Petroleum Containers:

- No evidence of suspect hazardous substance or other petroleum containers were identified at the Subject Property.

- Significant petroleum staining was observed in the vicinity of various auto parts situated in the northern portion of the property. The staining is present atop of asphalt that appears to be in poor condition. Due to the condition of the asphalt, the petroleum staining may have adversely impacted the subsurface soil and should be considered a REC.

## 5.0 REGULATORY AGENCY DOCUMENTS

Freedom of Information Act (FOIA) requests were issued to the following regulatory agencies with respect to the Subject Property. All reasonably ascertainable municipal records are provided with this report. **Appendix B** provides copies of the regulatory agency documents.

- New York City Department of City Planning
- New York City Department of Building
- New York City Department of Housing Preservation and Development
- New York City Department of Health
- New York City Bureau of Fire Department
- New York State Department of Environmental Conservation
- New York City Department of Environmental Protection

### *New York City Department of City Planning*

All obtainable FOIA documents were obtained via written request or other means. The address of the Subject Property is identified as 335-341 Grand Concourse, Bronx, New York. The Tax Map number for the Subject Property are listed as Block 2345, Lot 1.

The property has been identified with “E” Designation 227 (CEQR #108DCO071X) for HazMat / Noise / Air. The presence of the “E” Designation represents a REC.

The Department of Finance Occupancy Code is listed as “G-9 Garage/Gas Station”. The former use of the property as a gasoline station may have adversely impacted upon the environmental quality of the Site and should be considered a REC.

### *New York City Department of Building*

All obtainable FOIA documents were obtained via written request or other means. A FOIA request was submitted to the New York City Department of Building (NYCDOB). The NYCDOB indicates that there is 1 Complaint (none open), no violations, no ECB violations and 25 actions for the property.

The Certificate of Occupancy (C of O) in the NYCDOB records indicates that the building was constructed during 1921.

### *New York City Department of Housing Preservation and Development*

A FOIA request was submitted to the New York City Department of Housing Preservation and Development (NYCHPD). The NYCHPD was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCHPD has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCHPD will be provided as soon as it has been received and evaluated.

### *New York City Department of Health*

A FOIA request was submitted to the New York City Department of Health (NYCDOH). The NYCDOH was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCDOH has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCDOH will be provided as soon as it has been received and evaluated.

### *New York City Bureau of Fire Prevention*

A FOIA request was submitted to the New York City Bureau of Fire Prevention (NYCBFP). The NYCBFP was contacted via telephone to obtain the status of the FOIA request. As of the date of this report, the NYCBFP has not responded to our initial search request or subsequent follow-up calls. Any information provided by the NYCBFP will be provided as soon as it has been received and evaluated.

*New York State Department of Environmental Conservation*

A FOIA request was submitted to the New York State Department of Environmental Conservation (NYSDEC). As of the date of this report, the NYSDEC has not responded to our initial search request. Any information provided by the NYSDEC will be provided as soon as it has been received and evaluated.

The NYSDEC website was also searched for any records associated with the Subject Property. The Subject Property was not identified on the NYSDEC spills database website.

*New York City Department of Environmental Protection*

A FOIA request was submitted to the New York City Department of Environmental Protection (NYCDEP). As of the date of this report, the NYCDEP has not responded to our initial search request. Any information provided by the NYCDEP will be provided as soon as it has been received and evaluated.

## 6.0 SITE HISTORY

### 6.1 Sanborn Maps

Sanborn Fire Rate Insurance Maps for the Subject Property and its vicinity dated 1891, 1908, 1935, 1944, 1946, 1947, 1951, 1977, 1978, 1980, 1981, 1984, 1986, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 1998, 2001, 2002, 2003, 2004, 2005, 2006, 2007 were obtained and evaluated in order to establish the history of the Site. **Appendix C** provides a copy of the Sanborn Fire Rate Insurance Maps.

Date	Subject Property Shown As	Surrounding area
1891-1908	Vacant	Residential/vacant
1935	Garage. Two 550-gallon tanks buried	Residential/commercial
1944-1981	Filling station. 1-story building. 5 gas tanks.	Commercial
1984-2007	1-story building. Auto repair (not marked filling station)	Commercial

### 6.2 City Directory Search

In order to further assess the property's history, available City Directory files were obtained from EDR for review. The City Directories document known occupants of specific properties and sorted by individual addresses. **Appendix D** provides a copy of the City Directory Search.

The following provides a listing of all documented usages of the address 335 Grand Concourse:

Date	Use of Subject Property	Surrounding Property Use
1927-2005	1961-Arty's Texaco Service Station 1965- Arty's Texaco Service Station 1971- Arty's Texaco Service Station, Arista Service Center 1976-Cosmes Service Center, Arty's Texaco Service Station 1983-Henry's Scientific Auto Service 1993-Henry's Scientific Auto Service 2000-J&J Auto Body, Elco-1 Auto Repair 2005-Eagle Auto Repair, A-1 Towing	Commercial

### 6.3 Previous Studies

Hydro Tech was not provided with any historical reports or previous studies for the Subject Property.

### 6.4 Historical Use Summary

Based on a review of available information provided and/or obtained for the Subject Property as of the date of this ESA, it appears that the Subject Property was developed between 1908 and 1935 with a gasoline station. The current building was constructed between 1908 and 1935. Gasoline tanks were noted at the Subject Property. This information verifies the former use of the property as a gasoline station.

Numerous data gaps (maximum 26 years) were noted in the historical map review. Due to other historical information obtained over the course of this investigation, Hydro Tech does not consider this data failure/data gap significant, as it appears unlikely to have affected potential Recognized Environmental Conditions at the subject site.

## 7.0 NEIGHBORHOOD HAZARDOUS WASTE DATABASES

Federal, State, Local and Tribal hazardous waste databases were reviewed with respect to the Subject Property and surrounding properties. The search areas for each database were specified by ASTM E 1527. In addition, all orphan sites (those without adequate information for mapping purposes) listed in the database search were also reviewed, evaluated and incorporated (as needed). **Appendix F** provides a copy of the Database Search Results. The following databases, with the appropriate search radius, were reviewed:

<b>ASTM Standard Environmental Record Source</b>	<b>Approx. ASTM Minimum Search Distance (MSD)</b>	<b>Number of Mapped Sites within MSD</b>	<b>Number of Orphan Sites</b>
1. NPL (Superfund) <i>National Priorities List</i>	1.0 Mile	0	0
2. Delisted NPL Site <i>Delisted National Priorities List Site</i>	0.5 Mile	0	0
3. CERCLIS <i>Comprehensive Environmental Response Compensation &amp; Liability Information System</i>	0.5 Mile	0	0
4. CERCLIS NFRAP <i>CERCLIS No Further Remedial Action Planned Site</i>	0.5 Mile	0	0
5. RCRA-TSD CORRACTS <i>Resource Conservation &amp; Recovery Treatment/Storage/Disposal Facility Subject to Corrective Action</i>	1.0 Mile	0	0
6. RCRA-TSD <i>Resource Conservation &amp; Recovery Treatment/Storage/Disposal Facility (Non-Corrective Action)</i>	0.5 Mile	0	0
7. RCRA-LG <i>Resource Conservation &amp; Recovery Large Quantity Generator</i>	Site & Adjoining	0	3
8. RCRA-SG <i>Resource Conservation &amp; Recovery Small Quantity Generator</i>	Site & Adjoining	0	0
9. ERNS <i>Emergency Response Notification System</i>	Property Only	0	0
10. Local / State / Tribal UST, PBS <i>Registered Storage Tanks</i>	Site & Adjoining	0	0
11. Local / State / Tribal LTANKS <i>Leaking Underground Storage Tanks</i>	0.5 Mile	69	0
12. State Spill Incidents <i>NYSDEC Spill Sites</i>	0.125 Mile	28	12
13. Local / State / Tribal SWF <i>Solid Waste Facility / Landfill</i>	0.5 Mile	3	0
14. Local / State / Tribal CERCLIS <i>Inactive Hazardous Waste Disposal Site</i>	0.5 Mile	0	0
15. Inst. / Engineering Controls <i>Registry of Institutional and/or Engineering Controls</i>	Property Only	0	0
16. Voluntary Cleanup Program Sites <i>Local / State / Tribal VCP Sites</i>	0.5 Mile	0	0
17. Brownfield Sites <i>Local / State / Tribal Brownfield Sites</i>	0.5 Mile	2	0
18. Non-ASTM Record Source(s)	Not Applicable	No MSD has been established by ASTM for these sources	

The review and evaluation of the above Federal and State/Tribal/Local Databases indicates that the Subject Property is identified on the "E" Designation database. This listing as an "E" Designated property has been already identified and discussed.

The Site is also listed in the UST/AST database. The registration number is 2-607912 and has an expiration date of July 8, 2012. The property is identified as Eagle Auto Repair. One 275-gallon AST is registered for the property. The property's listing in the UST/AST database confirms the current/historical use of petroleum.

Sixty nine sites are listed in the Leaking Underground Storage Tanks (LUSTs) database within a ½ mile radius of the Subject Property. All but 3 of the sites have been cleaned up to the satisfaction of the NYSDEC and are closed. One of the 3 active sites has impacted groundwater and is located upgradient to the Subject Property. Of the other 2 sites, 1 has impacted soil and the other has impacted groundwater and is located downgradient of the Subject Property. The plume at the upgradient site impacting groundwater has been delineated and is currently under active remediation. None of the active LUST sites should impact upon the environmental quality of the Subject Property.

Twenty eight properties are listed in the NY Spills database within a ¼ mile radius of the Subject Property. All but 2 of the spill cases have been resolved by the NYSDEC and as such, they should not impact upon the environmental quality of the Subject Property. Of the remaining 2 sites, 1 has impacted only the soil and the remaining site is upgradient of the Subject Property and has impacted groundwater. However, active remediation has been undertaken on this spill. None of the NY Spill sites should impact upon the environmental quality of the Subject Property.

Three SWF are located within ½ mile of the Subject Property. Based upon their proximity to the Subject Property, the SWF sites should not adversely impact upon its environmental quality.

Two NYS Brownfield sites are located within ½ mile of the Subject Property. Based upon their proximity to the Subject Property, the NYS Brownfield sites should not adversely impact upon its environmental quality.

None of the remaining properties identified in the databases should impact upon the environmental quality of the Subject Property.

## **8.0 INTERVIEWS & CLIENT / USER-PROVIDED INFORMATION**

During the course of the Phase I Assessment, interviews were conducted with respect to the operation and history of the Site and a Client/User Questionnaire was provided.

1. The client/user did not respond to Hydro Tech's request for information regarding Environmental Liens or Activity and Use Limitations against the property that may have been filed or recorded under federal, tribal, state, or local law.
2. The client/user reported no specialized or actual knowledge or experience related to potential Recognized Environmental Conditions at the Subject Property or nearby properties.
3. The client/user did not respond to Hydro Tech's request for information regarding the relationship of the purchase price of the property to fair market value, specifically if it has been adjusted due to the known or potential presence of on-site contamination.
4. The client/user reported no commonly known information or information within the local community regarding past use(s) of the property (including the storage and/or release of chemicals, hazardous substances, petroleum products, etc.) that could have affected the environmental integrity of the subject site.
5. The client/user reported no environmental contamination or cleanups have occurred at the property.
6. Hydro Tech's Environmental provided the Questionnaire for the client/user to complete. The client did not provide the completed questionnaire to Hydro Tech Environmental for review.

### **8.1 Past and Present Site Associates**

Hydro Tech was not provided with historical owners, operators or occupants during the performance of the Phase I Assessment.

In addition, although an interview with the former owner(s) was not possible as none were provided to Hydro Tech as of the date of this ESA, we do not believe that any such owner(s) would have additional material information regarding the potential for contamination at the property that was not obtained from other sources over the course of this investigation.

## **9.0 CONCLUSIONS**

Hydro Tech has performed a Phase I Environmental Site Assessment of the Subject Property located at 335 Grand Concourse, Bronx, New York. Based upon the findings of the Phase I Assessment, the following Recognized Environmental Condition(s):

- The suspected presence of underground storage tanks (§4.0).
- The presence of an in-ground hydraulic lift (§4.0).
- The presence of significant petroleum staining atop of asphalt in poor condition (§4.0).
- The presence of E Designation (§5.0).
- The former use of the property as a gasoline station (§5.0).

Other than the item(s) listed above, no further work is required to assess the environmental quality of the Subject Property.

## **10.0 RECOMMENDATIONS**

Based upon the conclusions presented above, the following recommendation(s) are provided:

- A Phase II Assessment should be conducted in order to evaluate the potential impact from the current and historical tanks and the former site use as a gasoline station.
- Any future development should be coordinate with the NYC Mayor's Office of Environmental Remediation.

## **11.0 CREDENTIALS & DECLARATION**

### **11.1 Credentials**

In accordance with ASTM E 1527, the credentials of those personnel directly involved with the production of this Phase I are provided with this report. **Appendix F** provides a copy of the personnel credentials.

### **11.2 Environmental Professional Declaration**

We declare that to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in 40 CFR Part 312. We have the specific qualifications based on education, training and experience to access a property of the nature, history and setting of the Subject Property. Only where indicated we have developed and performed the AAs in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

### 13.0 EXCLUSIONS & DISCLAIMER

The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints imposed by the Client.

In preparing this report, **Hydro Tech Environmental, Corp.** may have relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to **Hydro Tech Environmental, Corp.** at the time of the subject property assessment. Although there may have been some degree of overlap in the information provided by these various sources, **Hydro Tech Environmental, Corp.** did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this subject property assessment.

Observations were made of the subject property and of structures on the subject property as indicated within the report. Where access to portions of the subject property or to structures on the subject property was unavailable or limited, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of non-hazardous or hazardous materials, or to the presence of indirect evidence relating to a non hazardous or hazardous materials, in that portion of the subject property or structure. In addition, **Hydro Tech Environmental, Corp.** renders no opinion as to the presence of hazardous materials, or the presence of indirect evidence relating to hazardous materials, where direct observation of the interior walls, floors, or ceiling of a structure on a subject property was obstructed by objects or coverings on or over these surfaces.

**Hydro Tech Environmental, Corp.** did not perform testing or analyses to determine the presence or concentration of asbestos at the subject property or in the environment of the subject property under the scope of the services performed.

The conclusions and recommendations contained in this report are based in part, where noted, upon the data obtained from a limited number of soil samples obtained from widely spaced subsurface explorations. The nature and extent of variations between these explorations may not become evident until further exploration. If variations or other latent conditions then appear evident, it will be necessary to reevaluate the conclusions and recommendations of this report.

Any water level reading made in test pits, borings, and/or observation wells were made at the times and under the conditions stated in the report. However, it must be noted that fluctuations in the level of groundwater may occur due to variations in rainfall and other factors different from those prevailing at the time measurements were made.

Except as noted within the text of the report, no qualitative laboratory testing was performed as part of the subject property assessment. Where such analyses have been conducted by an outside laboratory, **Hydro Tech Environmental, Corp.** has relied upon the data provided, and has not conducted an independent evaluation of the reliability of the data.

The conclusions and recommendations contained in this report are based in part, where noted, upon various types of chemical data and are contingent upon their validity. The data have been reviewed and interpretations were made in the report. As indicated within the report, some of the data may be preliminary "screening" level data, and should be confirmed with quantitative analyses if more specific information is necessary. Moreover, it should be noted that variations in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, and other factors. Should additional chemical data become available in the future, the data should be reviewed, and the conclusions and recommendations presented herein modified accordingly.

Chemical analyses have been performed for specific constituents during the course of this subject property assessment, as described in the text. However, it should be noted that additional chemical constituents not searched for during the current study may be present in soil and/or groundwater at the subject property.

This report was prepared solely for the use of the Client/User and is not intended for use by third parties. Unauthorized third parties shall indemnify and hold Hydro Tech harmless against any liability for any loss arising out of, or related to, reliance by any third party on any work performed hereunder, or the contents of this report.

Dear Ms. Cross:

Re: 335 Grand Concourse

We hereby acknowledge receipt of your **Freedom of Information Law** request dated January 17, 2012.

Your request is important to us and will be handled as expeditiously as possible. You are advised, however, that because of the large increase in the volume of such requests your response may be delayed.

If you have any questions, please call Brenda Farren, Records Access Officer, at (718) 595-3448. Please refer to the **FOIL log number(s)** listed below when calling.

Sincerely,

Brenda Farren  
FOIL Access Officer

Re: 335 Grand Concourse in the Bronx

Dear Ms. Cross:

We are in receipt of your Foil request for the above referenced site. The identification Number(s) assigned is: **R2-12-105.**

If for any reason you need to contact us again please use these numbers. When the programs are done gathering the files/information, this office will contact you.

Please email your future FOILs to Region 2 directly to the following email address:  
[r2foil@gw.dec.state.ny.us](mailto:r2foil@gw.dec.state.ny.us)

Please expect our response within 20 business days from the date of this letter.

If you have any questions @ your FOIL, please call Gloria Silva/ or Cynthia Whiting/FOIL Secretary at 718-484507, or email me providing the above FOIL # at: [r2foil@gw.dec.state.ny.us](mailto:r2foil@gw.dec.state.ny.us)

Sincerely yours,

Fawzy I. Abdelsadek, Ph.D., P.E.  
Regional Enforcement Coordinator

Please be advised that in your future submission of FOILs to Region 2, you should include the Spill(s), or PBS(s) number(s) to expedite your request. This will give you more information @ all records that we may have related to your FOIL(s). So that you will submit FOILs, for those that the additional information/records are needed.

NYSDEC public websites that are listed below:

Please be advised that relevant information responsive to your request may be found at the following Department of Environmental Conservation/Remediation's websites:

The Spills Database link is as follows:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=1>

HWR/Environmental Remediation Website:

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=3>

The PBS Database link is as follows:

1/26/2012

<http://www.dec.ny.gov/cfm/external/derexternal/index.cfm?pageid=4>

Also, you can search for Permits issued by NYSDEC by using the Link:

<http://www.dec.ny.gov/cfm/external/envapps/>

If you need assistance on how to search the above websites, please contact me.

Please email your future FOILs to Region 2 directly to the following email address:

[r2foil@gw.dec.state.ny.us](mailto:r2foil@gw.dec.state.ny.us)

If after your search, additional information/records are needed, please include the spill #(s), or PBS #(s), Permit #(s) and exact street address of the site(s) you are requesting information for, and email your request(s) to Region 2. Please note that Region 2 policy is to submit a FOIL request for a maximum of two (2) sites/FOIL. If you didn't provide the results (i.e. spills/PBS #s) of your websites search within 10 days, your FOIL will be closed

You may resubmit your FOIL again providing the above requested information.

Thank you for your FOIL request. If you have any questions, please call Gloria Silva/FOIL Secretary at (718) 482-4507, or email me providing the above FOIL # at: [r2foil@gw.dec.state.ny.us](mailto:r2foil@gw.dec.state.ny.us).

Sincerely yours,

2003	1994	1984	1947	
2002	1993	1981	1946	

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

## Limited Permission To Make Copies

Hydro Tech Env. Corp. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1927 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

# EXECUTIVE SUMMARY

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### ***State- and tribal - equivalent CERCLIS***

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 11/22/2011 has revealed that there is 1 SHWS

## EXECUTIVE SUMMARY

site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b>2350 FIFTH AVENUE CORP</b> Class Code: Significant threat to the public health or environment - action required.	<b>2350 5TH AVE</b>	<b>WNW 1/4 - 1/2 (0.328 mi.)</b>	<b>166</b>	<b>722</b>

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 08/01/2011 has revealed that there is 1 VAPOR REOPENED site within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 10/11/2011 has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

### **State and tribal leaking storage tank lists**

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 11/22/2011 has revealed that there are 37 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 32 HIST LTANKS sites within approximately 0.5 miles of the target property.

### **State and tribal registered storage tank lists**

TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the TANKS list, as provided by EDR, and dated 10/04/2011 has revealed that there are 2 TANKS sites within approximately 0.25 miles of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1

## EXECUTIVE SUMMARY

CBS AST site within approximately 0.25 miles of the target property.

### Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/22/2011 has revealed that there are 17 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 11 NY Hist Spills sites within approximately 0.125 miles of the target property.

## EXECUTIVE SUMMARY

### Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 06/15/2011 has revealed that there are 27 RCRA-NonGen sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 11/28/03 Reassigned from DeMeo to Foley. See spill #9814075 for info on former Merit station on nothern half of

property.  
File review: Underground Storage Tank Excavation Assessment Report (Delta, 11/4/02)

Five 4000gal(double-walled steel) gas USTs and an abandoned 550-gal(single-walled steel) UST excavated during raze and rebuild activities. Replaced with three 12000gal gas USTs in a separate tank cavity.

Lab analysis of the gasoline tank field post-ex soil samples identified MTBE in excess of TAGM in the four bottom samples (tank-2, tank-3, tank-4 and tank-5). MTBE concentrations ranged from 1500ppb(tank-5) to 7740ppb(tank-3). Total BTEX was non-detect in all soil samples.

No soil was excavated during tank pulls. Delta proposes conducting a Geoprobe assessment in the vicinity of the former tank field to delineate soil concentrations.

12/31/03 Received SHAR (Delta, 12/22/03) Report only covers the southern half of the existing BP service station. The nothern half is managed by Amerada Hess, formerly occupied by a Merit station. Site plan shows 6 monitoring wells on the northern portion of the property.(see spill #9814075) 1360 tons of petroleum-impacted soils were removed during raze and rebuild. Six soil borings were advanced around the former tank field and pump islands to depths between 11.5 and 20ft bgs. Lab analysis of soil samples did not identify VOCs in excess of TAGM. Three soil borings were converted to temporary 1" wells. Groundwater samples collected identified between nine and fourteen VOCs in excess of GWQS in all three samples. MTBE concentrations ranged from 2820ppb(SB-1/water) to 11500ppb(SB-2/water).

Delta installed three 2" permanent monitoring wells in June/July 2003 to depths between 19.9 and 21.4'bgs. Underlying bedrock was encountered in one of the three borings at 21.5'. Additional

groundwater samples were collected. Lab analysis identified VOCs in excess of GWQS in all three samples.

1/5/04 Discussed site with J. Sun, PM for Hess(#9814075). He will look for signed STIP from Hess for northern section of property. May have existing remediation system on property.

1/29/04 Received 4Q2003 monitoring report(Delta, 1/21/04). Max BTEX 29936ppb(MW-5) and max MTBE 2860ppb(MW-4). MW-2 is clean.

1/29/04 Joe Sun sent out stip to Hess. 3/24/04 Hess stip executed.

4/22/04 Received 1Q2004 monitoring report. DTW 12.5-19' bgs. Total BTEX from 10ppb(MW-2) to 15962ppb(MW-1). MTBE from 6.9ppb(MW-2) to 1720ppb(MW-3).

10/14/04 2Q04 monitoring report received. DTW 13-18' bgs. BTEX from 12ppb(MW-2) to 16174ppb(MW-1). MTBE from 3ppb(MW-2) to 1160ppb(MW-1).

4/7/05 Received 3Q04 and 4Q04 monitoring reports. 3Q04- BTEX ranged from ND(MW-2) to 18124ppb(MW-1). MTBE ranged from ND(MW-2) to 424ppb(MW-3).

4Q04- BTEX ranged from 1ppb(MW-2) to 16084ppb(MW-1). MTBE ranged from 9ppb(MW-2) to 507ppb(MW-3).

11/9/05: Reviewed quarterly report dated 9/29/05. Three wells sampled on 6/10/05. No LNAPL present. Max BTEX is 22437ppb (MW1) and max MTBE is 328ppb(MW3).

11/25/05 3Q05 - DTW 11.82-19.30' bgs. No LNAPL present. BTEX from 0.5ppb(MW-2) to 9858ppb(MW-1). MTBE from 2ppb(MW-2) to 559ppb(MW-3).

3/28/06 4Q05 sampling conducted 12/28/05 on three MWs. DTW 11.74-17.91' bgs. BTEX from 34ppb(MW-2) to 31268ppb(MW-1). MTBE from ND(MW-1) to 131ppb(MW-3). MW-1 is problem well. Concentrations in downgradient well(MW-3) are fluctuating. Hess has system operating on northside of property.

6/8/2006 - Feng - project reassigned to RJFeng. (RJF) 9/29/2006 - Feng - Portfolio meeting with BP and Delta. The site has limited access to trucks due to the canopy. Delta will keep quarterly monitoring.

(RJF)

1/4/2007 - Feng - 1Q2006, 10/18/2006, by Delta. Groundwater sampled and gauged 3/3/2006. 3 monitoring wells. DTW 12.23' to 18.31' bg. Flows southeast. No LNAPL. MW-1, 13,489 ppb BTEX, 23.8 ppb MTBE. MW-2, 1.4 ppb BTEX, 2.1 ppb MTBE. MW-3, 60.4 ppb BTEX, 81.4 ppb MTBE.

(RJF)

2/6/2007 - Feng - 2Q2006, 12/11/2006, by Delta. Groundwater sampled and gauged 6/30/2006. 3 monitoring wells. DTW 10.82' to 17.93' bg. Flows east-southeast. No LNAPL. MW-1, 14,887 ppb BTEX, 8.6 ppb MTBE. MW-2, 133.62 ppb BTEX, 0.4 ppb MTBE. MW-3, 16.69 ppb BTEX, 30.4 ppb MTBE.

Checked with Hess PM, RAP for SVE and ORC socks approved, but not implemented yet.

(RJF)

5/29/2007 - Feng - 3Q2006, 1/22/2007, by Delta. Groundwater sampled and gauged 9/26/2006. 3 monitoring wells. DTW 11.98' to 18.02' bg. Flows to southeast. LNAPL in MW-1 (0.02'). MW-1, 9,882 ppb BTEX, 7.7 ppb MTBE. MW-2, 0.45 ppb BTEX, 2 ppb MTBE. MW-3, 9.8 ppb

BTEX, 20.6 ppb MTBE.

(RJF)

8/15/2007 - Feng - 4Q2006, 7/2/2007. Groundwater sampled 12/13/2006. All 3 monitoring wells were sampled. DTW 12.09' to 18.14' bg. Flows to southeast. No LNAPL. MW-1, 17,027 ppb BTEX, <50 ppb MTBE. MW-2, BTEX ND, 1.7 ppb MTBE. MW-3, 21.7 ppb BTEX, 31.5 ppb MTBE. (RJF)

11/21/2007 - Feng - 1Q2007, 8/30/2007. Groundwater sampled 3/28/2007. All 3 monitoring wells were sampled. DTW 11.76' to 17.77' bg. Flows to southeast. No LNAPL. BTEX range ND to 10,616 ppb (MW-1). MTBE range 1.1 ppb to 13.6 ppb (MW-3). (RJF)

3/20/2008 - Feng - eDoc Quarterly Monitoring Report 3Q2007, 4Q2007 and 1Q2008. (RJF)

6/26/2008 - 3Q2007, 2/25/2008. Active service station. The monitoring well network was gauged and sampled on 8/22/007. The site was not sampled in 2Q2007. 3 monitoring wells were gauged and sampled. DTW 11.30' to 17.66' bg. Flows to southeast. No LNAPL. BTEX range ND to 9,528 ppb (MW-1). MTBE range ND to 14.2 ppb (MW-3). (RJF)

4Q2007, 2/25/2008. Active service station. The monitoring well network was gauged and sampled 11/14/2007. 3 monitoring wells. DTW 12.27' to 18.54' bg. Flows to southeast. NO LNAPL. BTEX range ND to 10,323 ppb (MW-1). MTBE range ND to 26.2 ppb (MW-3). (RJF)

1Q2008, 3/10/2008. Active service station. The monitoring well network was gauged and sampled 2/7/2008. 3 monitoring wells. DTW 12.45' to 18.49' bg. Flows to southeast. NO LNAPL. BTEX range 1 ppb to 10,600 ppb (MW-1). MTBE range 1 ppb to 25 ppb (MW-3). (RJF)

10/29/2008 - 2Q2008, 9/20/2008, by Delta. Active station. The monitoring well network was gauged and sampled 6/27/2008. 3 wells were gauged. NO LNAPL. DTW 11.66' to 18.62' bg. Flows to southeast. 3 wells were sampled. BTEX range 0.67 ug/L to 9,770 ug/L (MW-1). MTBE range ND to 14.0 ug/L (MW-3). (RJF)

3/4/2009 - 3Q2008, 12/11/2008, by Delta. Active station. The monitoring well network was gauged and sampled 9/4/2008. 3 wells were gauged. LNAPL in MW-1 (0.02'). DTW 11.95' to 18.09' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 10,540 ug/L (MW-1). MTBE range 1.1 ug/L to 7.2 ug/L (MW-3). (RJF)

4Q2008, 1/30/2009, by Delta. Active station. The monitoring well network was gauged and sampled on 12/17/2008. 3 wells were gauged. LNAPL in MW-1 (0.03'). DTW 11.57' to 17.57' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 9,980 ug/L (MW-1). MTBE range ND to 8.3 ug/L (MW-3). (RJF)

8/14/2009 - Reviewed Drilling Work Plan, dated 6/29/2009, by Delta, pdf copy via email. Delta proposes to install 2 monitoring wells northwest and southwest of MW-1. Email comments to Delta requiring one more downgradient well at the east side of the canopy. Revision due 9/2009. (RJF)

9/1/2009 - 2Q2009, 8/5/2009, by Delta. Active station. The monitoring well network was gauged and sampled on 6/29/2009. 3 wells were gauged. NO LNAPL. DTW 10.87' to 17.20' bg. Flows to southeast. 3 wells were sampled. BTEX range ND to 10,407 ug/L (MW-1). MTBE range ND to 7.1 ug/L (MW-3). (RJF)

(RJF)

9/11/2009 - email from Delta. attached with the SHAR of 12/29/2009  
3. Delta installed SB-6 at the east side of the canopy/tanks. The boring was advanced to 11.5 feet bgs. Weathered bedrock was encountered at approximately 8 feet bgs and there was no overburden saturation. soil sample taken from 9-11.5 feet, no VOCs/SVOCs detected. Delta requested not to install the well over there as required by DEC 8/14/2009.

(RJF)

3Q2009, 12/7/2009, by ARCADIS. 3 wells were gauged and sampled on 9/25/2009. LNAPL in MW-1 (0.01'). Max benzene 81 ug/L (MW-1). Max BTEX 6,200 ug/L (MW-1). Max MTBE 6.3 ug/L (MW-3). ARCADIS requests to reduce the monthly gauging to quarterly based on the intermittent nature of LNAPL occurrence in MW-1.

4Q2009, 2/5/2010, by ARCADIS. 3 wells were gauged and sampled on 12/30/2009. DTW 11.34-17.20' bg. Flows to east-southeast. NO LNAPL. max benzene 34 ug/L (MW-1). Max BTEX 7,900 ug/L (MW-1). Max MTBE 5.2 ug/L (MW-1). Due to project transition, the monthly gauging did not occur in October, November or January 2010, but has now resumed. Installation of 3 additional wells was proposed to DEC 12/2009 and will schedule field upon approval.

3/16/2010 - Reviewed Investigation Work Plan revision, dated 3/8/2010, by ARCADIS. ARCADIS proposes to install 3 monitoring wells, MW-4 west of the canopy, MW-5 south of the canopy in between MW-1 and MW-2, MW-6 east of the canopy. Work plan is approved. Report due 6/2010.

(RJF)

5/21/2010 - 1Q2010, 4/28/2010, by ARCADIS. 3 wells were gauged and sampled on 3/12/2010. DTW 19.73-21.33' bg. Flows to east-southeast. NO LNAPL. Max benzene 52 ug/L (MW-1). Max BTEX 7,500J ug/L (MW-1). Max MTBE 4.5J (MW-1). The 3 new wells are scheduled to be installed in 5/2010. ARCADIS requests reduce monthly gauging to quarterly.

08/26/10: This spill case is transferred from R. Feng to J. Kolleeny. Reviewed Results of 2nd Quarter 2010 GW Monitoring and Subsurface Hydrocarbon Assessment Rpt by ARCADIS, both dated 8/16/10 (in eDocs). 2nd Quarter 2010 sampling shows high dissolved contam in well MW-1. Subsurface Invest Rpt. summarizes install'n & sampling of 3 new soil borings, two of which were converted into mon wells (3rd boring hit refusal on presumed bedrock w/o hitting GW). Borings found saturated zone soil contam at MW-4, and significant GW impacts at MW-4 and MW-5. ARCADIS proposed adding new wells to mon program, continued quarterly mon, and evaluation of remedial technologies, feasibility study and remedial action plan. I sent letter (in eDocs) to Jon Armstrong of BP, cc's to Ray Wagner and Andrew Korik of ARCADIS, asking for add'l delin wells to north & west of most contaminated wells (MW-1, MW-4 & MW-5), with work plan for wells due by 9/17/10 and RAP due by 12/3/10. - J.

Kolleeny 08/30/10: Spill no. at adjacent former Merit Station to north of site (cleanup being managed by Hess) is 9814075; see rpts in eDocs for GW data. - J.

Kolleeny 09/01/10: On 8/27/10 received email from Ray Wagner of ARCADIS: "I believe we can accommodate you on request to add Former UST areas to site plans, where applicable, and we have this info. We will begin this process; please keep in mind there may be a little lag in updating some sites as we will be pulling figures from archive site

**BP AMOCO STATION #17782 (Continued)**

**S106002004**

files sent from Delta. I would like to have a call with you to discuss recently submitted investig rpt for BP station 17782 and your request for addt'l delin wells to west & north of MW-4. Merit site to north has wells just north of MW-4, and stepping out to west of MW-4 is limited due to subway and street. Please let me know if you would be available to discuss this later today or early next week." Spoke with Ray later that day, asked if he could send site plan showing northern half of site (former Merit Station), where cleanup is being managed by Hess. On 8/30/10, he sent figure and 2009 rpt by EnviroTrac showing wells on north portion of site and GW data. I sent email: "Thanks for fig. and rpt. Have you been able to find out anything about location of former USTs at former Amoco station?" He replied he would have that info by 9/1/10. On 9/1/10, received email from Andrew Korik of ARCADIS showing former UST locations on former Amoco & Merit portions of site (in eDocs). I sent email to Andrew & Ray of ARCADIS, cc to Jon Armstrong of BP: "Thanks for sending site plans with former UST locations. I looked over fig. and 2009 EnviroTrac rpt sent few days ago by Ray, and I also looked at more recent EnviroTrac rpt (July 2010) for northern (former Merit sta.) portion of site, and I see that monitoring well "MW-4" on southwestern part of that site has either been destroyed or is not being sampled. Therefore, I believe that an addt'l well to north of ARCADIS well MW-4 on former Amoco site, near former property line, is warranted. In light of constraints posed by nearby subway & Grand Concourse, I will not at this time ask for addt'l delin wells west of contam area represented by wells MW-1, MW-4 & MW-5. Please contact me if you have questions." -

JK 09/07/10: On 9/2/10, received email from Andrew Korik of ARCADIS with attached site plan showing proposed addt'l well location as requested (in eDocs). Email stated: "Per your rqst, see attached fig which shows location of one addt'l mon well proposed to be installed near former property boundary north of our existing MW-4. With your approval, we will schedule install'n & sampling of this well in accordance with procedures outlined in 3/8/10 Work Plan, approved by NYSDEC. Please contact me if you have any questions. Due to proximity of subway tunnel under street and portion of sidewalk, well may need to be moved 5 or 10 ft to east pending comments from NY MTA. Thank you." On 9/7/10, I sent email reply, with cc's to Ray Wagner of ARCADIS & Jon Armstrong of BP: "I would prefer if you could install new well about 5 ft to south of proposed location shown on attached drawing. However, I understand that final location of well may be largely determined by presence of subsurface utilities. Please consider this email as authorization to proceed with install'n of addt'l mon well. Well should be installed in accordance with procedures outlined in 03/08/10 Work Plan approved by NYSDEC. Feel free to contact me if you have any questions." Andrew wrote back: "Will try to install per your preference, assuming field conditions allow." -

JK 11/22/10: Received email from Andrew Korik of ARCADIS: "Just wanted to update you on work at BP site 17782 at 350 Grand Concourse. We installed and sampled addt'l well along sidewalk as requested. I am just wrapping up combined 3rd quarter rpt/well install'n rpt and expect to have something to you next week. We are also reviewing remedial alternatives and will be developing a RAP shortly." - J. Kolleeny 03/01/11: Reviewed Results of 3rd Quarter 2010 GW Monitoring and Intall'n of Addt'l GW Mon Well rpt by ARCADIS dated 12/3/10 (in eDocs). Results of Sept. 2010 GW sampling show MW-1 had 4,050

ug/L total BTEX (down from 7,890 ug/L in June 2010), MW-4 had 6,390 ug/L tBTEX (down from 13,600 ug/L in July 2010). New well MW-6A was installed as requested by DEC; soil samples showed VOC detections but no TAGM 4046 exceedances in sample at GW interface (12.5-13 ft bgs), but significant exceedances in soil sample from below water table (18-18.5 ft bgs), including 15 mg/kg ethylbenzene, 73 mg/kg m,p-xylene, 19 ug/L o-xylene, 42 mg/kg 1,2,4-trimethylbenzene, and 14 mg/kg 1,3,5-trimethylbenzene. GW sample from new well MW-6A, taken in Oct. 2010, was very contaminated, with 12,500 ug/L tBTEX and over 15,000 ug/L total VOCs. Rpt recommendations state quarterly GW monitoring will continue, with MW-6A added to mon program, and that RAP will be prepared and submitted to DEC in Jan. 2011. - J. Kolleeny 04/08/11: Reviewed 4th Quarter 2010 GW Monitoring and Analysis Rpt by ARCADIS, dated 3/7/11 (in eDocs). Results of Nov. and Dec. 2010 GW sampling show MW-1 had 6,150 ug/L total BTEX in Nov. 2010 (up from 4,050 ug/L in Sept. 2010) and increased to 10,700 ug/L tBTEX in Dec. 2010; MW-4 had 9,520 ug/L tBTEX in Nov. 2010 (up from 6390 ug/L in Sept. 2010) and increased to 10,600 ug/L tBTEX in Dec. 2010; MW-6A, not sampled in Nov. 2010, had 12,800 ug/L tBTEX in Dec. 2010 (up a little from 12,500 ug/L in Oct. 2010). Rpt recommendations state quarterly sampling & monthly gauging will continue, and RAP will be submitted in March 2011. - JK 04/11/11: Reviewed Remedial Action Work Plan for Anaerobic Biological Oxidation by ARCADIS, dated 2/28/11 (in eDocs). RAWP proposes injection of sulfate via 5 new injection wells, to enhance bioremediation and address persistent GW contam along west side of site. After 1st injection, one or two rounds of performance monitoring will be performed to determine frequency of add'l injections. I sent approval letter (in eDocs) to Jon Armstrong of BP, cc's to Andrew Korik & Gene Choquette of ARCADIS. - J. Kolleeny 4/11/2011 - Spill transferred back to JFeng. 5/4/2011 - email from Andy Korik "June - we are scheduled to install the injection wells per the approved RAWP starting Monday May 9 at the 350 Grand Concourse site. Please call me if you have any questions. Can we change the monthly gauging to quarterly at these sites where we have not seen product in over 1 year?" 5/5/2011 - email to Andy Korik "Andy, Yes, you can switch from monthly gauging to quarterly gauging for this site. In yesterday's email you said the field work will start on Monday 5/9/2011, how many days are you expected to be in the field? June" email from Andy Korik "The first day will be coring and hand clearing of the borings. I expect the well installations will start on Tuesday and be finished on Thursday - so 4 days on site (3 if things go very quickly)."

JF 5/17/2011 - received email attached with 1Q2011 quarterly report . eDoc.

JF 5/25/2011 - email from Andy Korik of ARCADIS "June - here is notification that the injection wells were installed at 350 Grand Concourse. Injection well IW-03 could not be installed due to shallow refusal with 4 attempts. We can compensate by increasing injection volumes at the other 4 wells. Still waiting for USEPA approval to inject."

Sulfate Injection Well Installation Notification was attached. eDoc.

JF 7/11/2011 - 1Q2011, 5/17/2011, by ARCADIS. The groundwater samples were collected on 3/31/2011. 6 wells were sampled. MW-6A located in the north of MW-4 and west of the canopy was installed in

10/2010. NO LNAPL. The site is changed to quarterly gauging. Max BTEX 11,000 ug/L (MW-6A). Max MTBE 12 ug/L (MW-5).

Sulfate Injection Well Installation Notification, 5/25/211, by ARC ADIS. The installation of four sulfate injection wells took place during the week of May 9 through May 13, 2011. The approved RAWP specified that 5 injection wells to be installed; however, due to refusal at 1.5 to 5 feet depth during 4 attempts to install well IW-03, an injection well was not installed at the proposed IW-03 location. Injection volumes at IW-2 and IW-04 can be adjusted to compensated for the absense of IW-03. They submitted an Inventory of Injection Wells package to USEPA on 5/5/2011. Will notify DEC one week prior to the injection. No soil and groudwater samples taken. JF

Remarks: impacted soil discovered tank removal - will be excvated during rebuild

APPENDIX F  
CREDENTIALS

Mostafa El Sehamy, P.G., C.G.W.P., C.E.M.  
**President, Senior Hydrogeologist**

Mr. El Sehamy has over fifteen (15) years of experience in hydrogeology and environmental engineering, involving such activities as groundwater investigation, water quality modeling, ground and surface water quality analysis, environmental impact assessment, remediation design of replacement of domestic well systems in contaminated areas; aquifer sensitivity studies for hydrocarbons and solvents and soil and groundwater investigations of leaking underground storage tanks and pilot venting studies. Mr. El Sehamy has designed over 50 remediation systems for the New York State Department of Environmental Conservation (Oil Spill Prevention) and private sectors. The remediation system involved several techniques, such as pump and treat, soil venting, air sparging, bio-remediation and bio venting. Mr. El Sehamy has also conducted several remedial investigation/feasibility studies in New York State.

**Representative Occupational Experience**

- ❑ *Groundwater and Hydrologic Modeling*  
Groundwater flow and contaminant transport, modeling utilizing MODFLOW, PLASM, MODPATH and WHPA. Hydrologic modeling utilizing HELP. Assessing model inputs and outputs, boundary and initial conditions, model calibrations, verification and sensitivity analysis and performing analytical checks. Hydrologic studies and water analysis.
- ❑ *Environmental Site Assessments*  
Conducted Phase I and II Environmental Site Assessments, analysis of site investigation reports, identifying contamination locations and sources. Gas Chromatograph analysis and water sampling, analyzing laboratory results for QA/QC, magnetometer surveys for locating buried drums and underground storage tanks (USTs), estimating UST and other subsurface leaks, septic tank cleanup inspection, liability assessments and estimating costs to attain compliance.
- ❑ *Expert Witness*  
Offered expert witness testimony for the New York State Department of Environmental Conservation (NYSDEC) and several private sector cases.
- ❑ *Environmental Impact Statements*  
Conducted and supervised several environmental impact statements for shopping centers in the states of New York and North Carolina.
- ❑ *Solute Transport Modeling*  
Conducted groundwater flow and solute transport modeling at Superfund, municipal, industrial and water supply sites impacted by organic/inorganic hydrocarbons, PCBs and metals. Developed strategies to contain and clean-up aquifers, protect water supply wells and prohibit impacts to surface water bodies, including containment of free phase product recovery. Analytical and numerical models, such as PLASM, MODFLOW, Random Walk, Quickflow, Flowpath and Groundwater Path were used.

- ❑ *Risk Assessments*  
Delineated dissolved petroleum hydrocarbon plume and implemented a risk assessment regarding a subsurface storage tank release into the Long Island Aquifer.
- ❑ *Engineering Compliance*  
Auditing manufacturing plants, assessing plant-wide environmental conditions, identifying present and potential RCRA wastes and other environmental problems and offering solutions, SARA Title III calculations, environmental inventorying, compliance status and potential impact analysis of waste disposal practices, air compliance analysis, insurance claims analysis and preparing work plans and engineering reports.
- ❑ *Remedial Investigation and Feasibility Studies*  
Oversight/planning of site investigations; data analysis, including statistical analysis and geostatistical contouring utilizing SURFER and GEOSOFT/KRIGING; performance of feasibility studies, including technology evaluations and screening, alternatives development and evaluation and cost estimations.
- ❑ *Due-Diligence Programs*  
Designed and implemented due-diligence programs (ranging from Phase I Assessment to Comprehensive Hydrogeologic Investigations) to assess environmental liabilities for numerous land development clientele.
- ❑ *Delineation of Chlorinated Organic Plumes*  
Supervised the delineation of a dissolved chlorinated organic plume from underground tank loss. Developed a remedial action program in accordance with New York State regulatory guidelines to abate soil and groundwater contamination.
- ❑ *Research Projects*  
Conducted groundwater studies with Nassau County Department of Public Works to investigate the impact of heating oil and solvents on public supply wells in the Levittown and Glen Cove areas of New York State.
- ❑ *Remedial Action*  
Prepared remedial action plans. Designed and implemented hydrocarbon remediation systems for soil and groundwater.
- ❑ *Pump Test Aquifer Analysis*  
Conducted several pump test aquifer analysis and field coordination in relation to water supply feasibility studies for the New York City Transit Authority.
- ❑ *OSHA Instructor*  
Instructed several courses, such as, OSHA 40 Hours Right to Know, CPR, 8 Hour OSHA Refresher, Fall Protection, Confined Space Entry and Lockout/tag-out. Developed safety programs for confine space and accident investigations.
  
- ❑ *Hazardous Waste Remediation Sites*  
Project Manager - RI/FS, pre design investigation, remedial design, construction oversight of the remedial action, and operations and

maintenance of the soil vapor and groundwater treatment systems. Each RI/FS was performed under the direction of NYSDEC.

### **Employment**

2001 - Present	President, Senior Hydrogeologist Hydro Tech Environmental Corp., Commack, New York
1993 - 2001	Director of Professional Services and Safety Fenley & Nicol Environmental, Inc., Deer Park, New York
1992 - 1993	Senior Hydrogeologist Fenley & Nicol Environmental, Inc. Deer Park, New York
1989 - 1992	Hydrogeologist Nassau County Dept. of Health, Mineola, New York
1986 - 1989	Hydrogeologist Fanning, Phillips and Molnar, Ronkonkoma, New York

### **Education**

M.S. Hydrogeology, Adelphi University at Garden City, New York, 1989  
Graduate Geology studies, Brooklyn College, City University of New York, 1981  
B.S. Engineering Geology, Cairo University, Egypt, 1978

### **Affiliations and Certifications**

- Association of Groundwater Scientists and Engineers
- American Institute of Professional Geologists
- American Association of Petroleum Geologists
- Long Island Geologist Organization
- Environmental Assessment Association
- New York State Asbestos Investigator
- American Society of Safety Engineers
- American Heart Association: CPR Instructor

### Registrations and Certifications

- Professional Geologist – Commonwealth of Pennsylvania (P.G.- #001135 – G)
- Licensed Geologist – State of North Carolina (L.G. – #1714)
- Certified Groundwater Professional (C.G.W.P. #364)
- Certified Professional Geologist (C.P.G. # 9206)
- Certified Environmental Manager (C.E.M. # 73492)
- Certified City of New York Asbestos – Investigator (# 03541)

### Courses and Seminars

- “Practical Modeling of Pump and Treat Systems using Modflow, Path 3D and Flow Path” Papadupulos & Associates, Inc.
- “Dense Non-aqueous Phase Liquids (DNAPLs): Site Characterization and Remediations” Central New York Association of Professional Geologists.
- “Understanding Migration, Assessment and Remediation of LNAPLs and DNAPLs” National Groundwater Association.
- “Petroleum-Contaminated Soil and Groundwater” University of Massachusetts.
- “Ground water Remediation and Modeling”, Newburgh, New York.

### Publications/Presentations

- *A Case Study of the Impact of MTBE on the Investigation and Remediation of a Fuel Oil Release*, National Groundwater Focus Conference MTBE in Groundwater: Assessment, Remediation Technologies & Public Policy, Baltimore, MD June 4-5, 2001.
- *Is MTBE in Fuel Oil? Why MTBE Plays a Major Concern on Long Island*, Long Island Business News, February 2001
- *Cleaning Up UST Leaks*, El Sehamy, Mostafa, Environmental Protection, June 1997.
- *Overview of the Petrex Passive Soil Gas Technique - Two Case Studies*, El Sehamy, Mostafa & Jacobs, Jr., Dave T., Long Island Geologists, April 1996
- *Temporal Constraints on Free Phase Floating Petroleum Product Rebound in the Upper Glacial Aquifer*, Long Island New York, El Sehamy, Mostafa & Winslow, David, Long Island Geologists, April 1996
- *Successful Remediation of Gasoline Spills on Long Island by Application of a Combination of Technologies- Two Case Studies*, El Sehamy, Mostafa & Korlipara, Ravi, Long Island Geologists, April 1995

- 2000 – 2001            Assistant Director, Professional Services  
Fenley & Nicol Environmental, Inc., Deer Park, New York
- 1999 – 2000            Senior Geologist  
Fenley & Nicol Environmental, Inc. Deer Park, New York
- 1995 – 1999            Operations Director  
Advanced Cleanup Technologies, Inc., Farmingdale, New  
York
- 1992 – 1995            Project Geologist  
Advanced Cleanup Technologies, Inc., Roslyn Heights, New York

#### Education

B.S. Geology, State University of New York at Oneonta, 1991

#### Affiliations and Certifications

- American Institute of Professional Geologists
- American Association of Petroleum Geologists
- Long Island Geologist Organization
- Geological Society of America
- American Standards in Testing Materials – E50 Committee Member
- Environmental Assessment Association

## **1.0 INTRODUCTION**

This health and safety plan (HASP) describes the health and safety (HAS) guidelines developed for this site to protect on-site personnel, visitors, and the public from physical harm and exposure to hazardous materials or wastes. In accordance with the Occupational Safety and Health Administration (OSHA) at 29 CFR Part 1910.120 Hazardous Waste Operations and Emergency Response Final Rule, this HASP addresses the potential and actual safety and health hazards relating to of each phase of site operations.

This site-specific HASP is based on the best available information to date. The HASP may be revised when new information on site conditions is received or identified.

ESPL and contractor employees may be exposed to risks from hazardous conditions related to activities at this site. ESPL's policy is to minimize the possibility of work-related injury through aware and qualified supervision, health and safety training, medical monitoring, and the use of appropriate personal protective equipment.

This site-specific Health and Safety Plan (HASP) applies to ESPL and contractor personnel where operations involve actual or potential exposure to safety or health hazards. This HASP describes emergency response procedures for actual and potential physical and chemical hazards that have been identified by ESPL. This HASP is also intended to inform and guide all personnel entering an exclusion zone. ESPL's sub-contractors are retained as independent contractors and, are responsible for ensuring the health and safety of their own employees.

ESPL may require that its personnel take certain precautions in accordance with this HASP, and ESPL requests that others protect their personnel in a manner that they deem necessary or sufficient.

### **1.1 Brief Description of Project**

Remedial action at the site is proposed to consist of advancement of three (5) borings identified in the Phase II Work Plan dated March 2014.

### **1.2 Site History**

The subject area is situated in a Commercial/Residential Zoning District area of Bronx (C6-2A). (See Appendix A, Fig. 1). The subject site is situated on the corner of the intersection of 140<sup>th</sup> Street and Grand Concourse. According to the New York City Department of Finance, Office of the City Register Information System (ACRIS), the assessor's parcel number of the property is Block 2345, Lots 1, in the Borough of Bronx, New York.

The subject site consists of a one story building, approximately 25 by 60 feet that was used for the repair and maintenance of automobiles. The lot is approximately 60 by 83 feet.

### **1.3 Synopsis of Remedial Actions**

A contractor shall be retained to perform advancement of three (3) boreholes to obtaining soil and groundwater samples by this technique.

### **1.4 Site Operations to be performed**

Geoprobe boring installation for soil, groundwater and soil vapor sampling.

## **2.0 ORGANIZATIONAL STRUCTURE**

Principal in Charge: Ray Kahn (917-939-736 6)

Project Supervisor / Overall Project Manager: Margaret Tavares (646-772-8820)

Site Safety and Health Officer: Margaret Tavares , (646-772-8820)

Additional Site Personnel: Mir Fazlul Karim

<u>Title</u>	<u>Name</u>
Project Manager	Ray Kahn, P. E.
Field Supervisor	Margaret Tavares
Health and Safety Officer	Margaret Tavares, Mir Fazlul Karim
Administration / Clerical	Grace Cuevas
Chemical Analysis	By a New York State Department of Health Environmental Laboratory Approval Program (NYSDOH ELAP) certified laboratory

### **2.1 Roles and Responsibilities**

The ESPL Project Supervisor is responsible for overall project administration and for supervising implementation of the HASP by ESPL personnel on site. All applicable OSHA health and safety (HAS) standards shall be applied. Each subcontractor (defined as an OSHA employer) is also responsible for the health and safety of its employees. If there is any dispute with regard to HAS or project activities, on-site personnel shall attempt to resolve the issue. If the issue cannot be resolved, in the work zone, then the project superintendent shall be consulted.

The ESPL Site Safety Officer is also responsible for coordinating HAS standards on-site. The Site Safety Officer will have met the emergency response and hazardous materials handling training requirements of OSHA 29 CFR Part 1910.120, completed supervisors training, and have appropriate

experience pertinent to the on-site work. The Site Safety Officer is authorized to suspend site work based on safety concerns, and is responsible for:

1. Indoctrinating personnel with regard to all of the information in this HASP and any other safety requirements to be observed during site operations, including, but not limited to, decontamination procedures, designation of work zones and levels of protection, air monitoring, fit testing, and emergency procedures dealing with fire and medical situations;
2. Coordinating site safety decisions with the Project Supervisor and the Principal in Charge;
3. Maintaining the designation of exclusion, decontamination, and support zones on a daily basis;
4. Monitoring the condition and status of known on-site hazards, and maintenance and implementation of the air quality-monitoring program specified in this HASP;
5. Maintaining the Site Personnel log;
6. Maintaining records of safety problems encountered, corrective actions taken, and documentation of any chemical exposures or physical injuries. The Site Safety Officer will document these conditions in a bound notebook and maintain a copy of this log on-site; and
7. Periodic inspections of the site to determine the effectiveness of the HASP.

Any person who observes safety concerns or potential hazards that have not been addressed in the daily safety meetings should immediately report observations/concerns to the ESPL Site Safety Officer or other appropriate key personnel.

### **3.0 HAZARD ASSESSMENT**

This section identifies the activity-specific hazards associated with site operations and standard operating procedures (SOPs) that should be implemented to reduce the hazards; identifies general physical hazards that can be expected at most sites; and presents a summary of documented or potential chemical hazards at the site. Every effort must be made to reduce or eliminate these hazards. Those that cannot be eliminated must be guarded against by using engineering controls and/or personal protective equipment.

### **3.1 Activity-Specific Hazards and Standard Operating Procedures**

#### **In-situ Remediation:**

Geoprobe borings.

#### **Identification of the Hazards associated with each task:**

##### **Geoprobe Borings**

Drilling operations may expose workers to rotating equipment, heavy moving objects and overhead hazards. Booms and derricks shall not be raised unless the area is clear of overhead hazards such as tree limbs and electrical power lines. Underground utilities may pose a hazard if encountered during drilling.

##### **Mechanical System Construction:**

Mechanical system construction will include piping and electrical construction that involves the use of standard tools and electrical equipment such as hammers, saws, power cutting tools, drills and other equipment. These types of tools shall be used in accordance with manufactures recommendations for specific hazards posed by each.

##### **System Operation:**

The operation of a system in a petroleum-contaminated site may require field visits and well monitoring operations such as depth to water measurements, depth to product measurements, air, soil and groundwater sample collection. The hazard associated with this task is the possible worker exposure to gasoline in liquid and vapor forms.

##### **Required Hazard Controls or SOP:**

1. Use tools in accordance with manufactures specifications.
2. Use ground fault circuit interrupters for all electrical work.
3. Avoid wearing loose clothing around rotating machinery associated with well drilling equipment.
4. Use OSHA compliant personal protective equipment.
5. Hand digging and site mark outs shall be performed prior to commencement of drilling operations to avoid underground utilities. Overhead inspections shall be performed prior to raising drill rig derricks and booms.

### **3.2 General Site Hazards**

Applicable OSHA 29 CFR 1910.120(m) standards for illumination shall apply. Generally, all work at this site will be conducted during daylight hours. All electrical power must be connected to a ground fault circuit interrupter. All equipment that will enter excavations must be suitable and approved (i.e. intrinsically safe) for use in potentially explosive environments. Applicable OSHA 29 CFR 1926 Subpart K standards for use of electricity shall apply.

Work in which a worker could fall will be performed using appropriate ladders and/or protection (e.g. body harness and lifeline). All work at this site is expected to be conducted at the ground surface.

When the temperature is above 70°F and personnel are wearing protective clothing, a heat stress-monitoring program shall be implemented. Employees shall be allowed break periods and beverages as necessary. All personnel routinely working on site (including the support zone) shall be familiar with the symptoms, signs, and emergency care associated with heat stress, heat exhaustion, and heat stroke as discussed in Section 6 of this HASP.

Cold stress is a result of cold, wetness, and wind. A worker's susceptibility to cold stress can vary according to his/her physical fitness, degree of acclimatization to cold weather, age, and diet. A cold stress-monitoring program shall be implemented as appropriate. Employees shall have access to break periods, shelter, and beverages as necessary. All personnel routinely working on-site (including the support zone) shall be familiar with the symptoms, signs, and emergency care associated with cold stress, hypothermia, and frostbite as discussed in Section 6 of this HASP.

In accordance with 29 CFR 1910.151(c), all site related operations involving possible eye injury, (chemical splash, etc.), must have approved eye wash units readily available (in the Site Safety Officer's vehicle and in the job trailer). Protective eyewear shall be donned in Level D, when directed by the site safety officer. (The full-face APR required by Level C and the pressure demand self-contained breathing apparatus mask required by Level B serve as eye protection.)

Operations creating the potential for fire hazards shall be conducted in a manner that minimizes risk. Non-sparking tools and fire extinguishers shall be used or available as directed by the site safety officer when potentially explosive atmospheres may be encountered. Ignition sources shall be removed from work areas. When necessary, explosion-proof instruments and/or bonding and grounding will be used to prevent fire or explosion.

Overhead and underground utilities shall be identified and/or inspected and appropriate safety precautions taken before conducting operations involving potential contact or interference.

### **3.3 Biological Hazards**

Biological hazards can cause infection or disease in people, plants, animals, or microorganisms. These hazards are divided into five categories: viral, rickettsial/chlamydia, bacterial, fungal, and parasitic.

Biological agents may be dispersed by wind or water. Many biological agents require a carrier (e.g. bees, ticks, snakes) to infect a host; therefore, controlling the agent may require controlling or avoiding the carrier. Contact with some biological agents may be avoided by using personal protective equipment similar to that used for chemical hazards.

#### **4.0 TRAINING REQUIREMENTS**

All personnel entering an exclusion zone or decontamination zone must have met training requirements for hazardous waste site operations and emergency response operations in accordance with OSHA 29 CFR 1910.120(e).

Documentation of personnel training is maintained on file, and each employee will have copies of his/her applicable 40-Hour OSHA Training, 8-Hour Refresher Training, and Supervisor Training certificates on-site (located in job trailer files). A summary of personnel training status and HAS training records is shown in Table 1-1. Each subcontractor working on the job must provide the site safety officer with training documentation for its personnel.

**Notes:**

- (1) Physicals will be completed before site work begins.
- (2) An 8-hour refresher course including respirator fit testing will be conducted before site work begins.
- (3) Union employees working in the exclusion zone will have 40-hours training. Additional workers, who meet all requirements specified in this plan, will be supplied by the local unions as needed.

## 5.0 PERSONAL PROTECTIVE EQUIPMENT

Personal protective equipment (PPE) shall be selected in accordance with the site air monitoring program and hazard assessment, OSHA 29 CFR 1910.120(.c) and (g), and 1910.132. Protective equipment shall be NIOSH-approved and respiratory protection shall conform to OSHA 29 CFR Part 1910.133 and 1910.134 specifications; head protection shall conform to 1910.135; eye and face protection shall conform to 1910.133; and foot protection shall conform to 1910.136.

The level of personnel protection for site activities described in the hazard assessment is as follows:

<u>Location</u>	<u>Job Function</u>	<u>Level of Protection</u>			
Exclusion Zone	D	A	B	C	D
	_____	A	B	C	D
	_____	A	B	C	D
	_____	A	B	C	D
Decontamination Zone	D	A	B	C	D
	_____	A	B	C	D
	_____	A	B	C	D
	_____	A	B	C	D

Specific protective equipment for each level of protection is as follows:

<b>Level A</b>	_____	<b>Level B</b>	_____
	_____		_____
	_____		_____
<b>Level C</b>	_____	<b>Level D</b>	Hardhat and safety boots
	_____		_____
	_____		_____
	_____		_____

List type of air-purifying canister to be used if required. \_\_\_\_\_

Other PPE not listed above:

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE

WITHOUT THE APPROVAL OF THE SITE SAFETY OFFICER.

A description of typical PPE for each protection level is as follows:

## **5.1 Level A Protection**

### **1. PPE:**

Supplied-air respirator approved by the Mine Safety and health Administration (MSHA) and NIOSH. Respirators may be:

- Positive-pressure SCBA; or
  - Positive-pressure airline respirator (with escape bottle for immediately Dangerous to Life and Health (IDLH) or potential for IDLH atmosphere).
- b. Fully encapsulating chemical-resistant suit.
  - c. Coveralls.
  - d. Cotton long underwear\*.
  - e. Gloves (inner), chemical-resistant.
  - f. Boots, chemical-resistant, steel toe and shank. (Depending on suit construction, worn over or under suit boot.
  - g. Hard hat (under suit)\*.
  - h. Disposable gloves and boot covers (worn over fully encapsulating suit).
  - i. Cooling unit \*.
  - j. Two-way radio communications (inherently safe)\*.

\*Optional

### **2. Criteria for Selection:**

Meeting any of these criteria warrants use of Level A protection:

- a. The chemical substance has been identified and requires the highest level of protection for skin, eyes, and the respiratory system based on:
  - Measures (or potential for) high concentration or atmospheric vapors, gases, or particulate, or
  - Site operations and work functions involve high potential for

splash, immersion, or exposure to unexpected vapors, gases, or particles of materials highly toxic to the skin.

- b. Substances with a high degree of hazard to the skin are known or suspected to be present, and skin contact is possible.
- c. Operations must be conducted in confined, poorly ventilated areas until the absences of substances requiring Level A protection is determined.
- d. Direct readings on field Flame Ionization Detectors (FID) or phototoionization Detectors (PID) and similar instruments indicate high levels of unidentified vapors and gases in the air.

### **3. Guidance on Selection**

- a. Fully encapsulating suits are primarily designed to provide gas or vapor-tight barrier between the wearer and atmospheric conditions.

Therefore Level A is generally worn when high concentrations of airborne substances could severely affect the skin. Since Level A required the use of SCBA, the eyes and respiratory system are also more protected.

Until air surveillance data become available to assist in the selection of the appropriate level of protection, the use of Level A may have to be based on indirect evidence of the potential for atmospheric contamination or other means of skin contact with severe skin affecting substances.

Conditions that may require Level A protection include:

- Confined spaces: Enclosed, confined, or poorly ventilated areas are conducive to the build up of toxic vapors, gases, or particles. (Explosive or oxygen-deficient atmospheres are also more probable in confined spaces). Confined-space entry does not automatically warrant wearing Level A protection, but should serve as a cue to carefully consider and to justify a lower level of protection.
- Suspected / known highly toxic substances: Various substances that are highly toxic, especially skin absorption, for example, fuming corrosives, cyanide compounds, concentrated pesticides, Department of Transportation Poison "A" materials suspected carcinogens, and infectious may be known or suspected to be involved. Field instruments may not be available to detect or quantify air concentrations of these materials. Until these substances are identified and concentrations measured maximum protection may be necessary.
- Visible emissions: Visible air emissions from leaking containers or

railroad / vehicular tank cars, as well smoke from chemical fires and others indicate high potential for concentrations or substances that could be extreme respiratory or skin hazards.

- Job functions: Initial site entries are generally walk-through, in which instruments and visual observations are used to make a preliminary evaluation of the hazards.

In initial site entries, Level A should be worn when:

- There is a probability for exposure to high concentrations of vapors, gases, or particulates; and
- Substances are known or suspected of being extremely toxic directly to the skin or by being absorbed.

Subsequent entries are to conduct the many activities needed to reduce the environmental impact of the incident. Levels of protection for later operations are based not only on data obtained from the initial and subsequent environmental monitoring, but also on the probability of contamination and ease of decontamination.

Examples of situations where Level A has been worn are:

- Excavating of soil to sample buried drums suspected of containing high concentrations of dioxin;
- Entering a cloud of chlorine to repair a valve broken in a railroad accident;
- Handling and removing drums known to contain petroleum; and
- Responding to accidents involving cyanide, arsenic, and undiluted pesticides.

The fully encapsulating suit provides the highest degree of protection to skin, eyes, and respiratory system if the suit material resists chemicals during the time the suit is worn. While Level A provides maximum protection, all suit material may be rapidly permeated and degraded by certain chemicals from extremely high air concentrations, splashes, or an immersion of boots or gloves in concentrated liquids or sludges. These limitations should be recognized when specifying the type of fully encapsulating suit. Whenever possible, the suit material should be matched with the substance it is used to protect against.

## 5.2 Level B Protection

### 1. PPE:

- a. Positive-pressure SCBA (MSHA\NIOSH approved); or
- b. Positive-pressure air line respirator (with escape bottle for IDLH potential for IDLH atmosphere) MSHA/NIOSH approved;
- c. Chemical resistant clothing (overalls and long-sleeved jacket; coveralls or hooded one-or two-piece chemical splash suit; disposable chemical-resistant, one-piece suits);
- d. Cotton long underwear\*;
- e. Coveralls;
- f. Gloves (outer), chemical-resistant;
- g. Gloves (inner), chemical-resistant;
- h. Boots (inner), leather work shoe with steel toe and shank;
- i. Boots (outer), chemical-resistant, (disposable);
- j. Hard hat (face shield\*);
- k. 2-way radio communication\*; and
- l. Taping between suit and gloves; and suit and boots.

\* Optional

### 2. Criteria for Selection

Any one of the following conditions warrants use of Level B Protection:

- a. The type and atmospheric concentration of toxic substances have been identified and require a high level of respiratory protection, but less skin protection than Level A. These atmospheres would be:
  - Have IDLH concentrations; or
  - Exceed limits of protection afforded by an air-purifying mask; or
  - Contain substances requiring air-supplied equipment, but

substances and/or concentrations do not represent a serious skin hazard.

- b. The atmosphere contains less than 19.5% oxygen.
- c. Site operations make it highly unlikely that the work being done will generate high concentrations of vapors, gases or particulates, or splashes of material that will affect the skin of personnel wearing Level B protection.
- d. Working in confined spaces.
- e. Total atmospheric concentrations, sustained in the breathing zone, of unidentified vapors or gases range from 5 ppm above background to 500 ppm above background as measured by direct reading instruments such as the ID or PID or similar instruments, but vapors and gases are not suspected of containing high levels of chemicals toxic to skin

### **3. Guidance on Selection Criteria:**

Level B equipment provides a reasonable degree of protection against splashes and to lower air concentrations, but a somewhat lower level of protection to skin than Level A. The chemical-resistant clothing required in Level B is available in a wide variety of styles, materials, construction detail, permeability, etc. Taping joints between the gloves, boot and suit, and between the hood and respirator reduces the possibility for splash and vapor or gas penetration. These factors all affect the degree of protection afforded. Therefore the Safety Officer should select the most effective chemical-resistant clothing based on the known or anticipated hazards and/or job function.

Level B does provide a high level of protection to the respiratory tract. Generally, if SCBA is required, Level B clothing rather than a fully encapsulating suit (Level A) is selected based on needing less protection against known or anticipated substances affecting the skin. Level B skin protection is selected by:

- a. Comparing the concentrations of known or identified substances in air with skin toxicity data.
- b. Determining the presence of substances that are destructive to or readily absorbed through the skin by liquid splashes, unexpected high levels of gases, vapor or particulates, or other means of direct contact; and
- c. Assessing the effect of the substance (at its measure air concentrations or splash potential) on the small area of the head and neck left unprotected by chemical-resistant clothing.

For initial site entry at an open site, Level B protection should protect site personnel, providing the conditions described in selecting Level A are known of judged to be absent.

### **5.3 Level C Protection**

#### **1. PPE**

- a. Full-face, air purifying, cartridge- or canister-equipped respirator (MSHA/NIOSH approved) with cartridges appropriate for the respiratory hazards;
- b. Chemical-resistant clothing (coveralls, hooded, one-or two-piece chemical splash suit; chemical-resistant hood and apron; disposable chemical-resistant coveralls;
- c. Coveralls;
- d. Cotton long underwear\*;
- e. Gloves (outer), chemical resistant;
- f. Gloves (inner), chemical-resistant
- g. Boots (inner), leather work shoes with steel toes and shank;
- h. Boots (outer), chemical-resistant (disposable)\*;
- i. Hard hat (face shield)\*;
- j. Escape SCBA of at least 5 minute duration;
- k. 2-way radio communications (inherently safe)\*; and
- l. Taping between suit and boots, and suit and gloves.

\* Optional

#### **2. Criteria for Selection**

Meeting all of these criteria permits use of Level C protection:

- a. Measured air concentrations of Identified substances will be reduced by the respirator to, at, or below the substance's Threshold Limit Value (TLV) or appropriate occupational exposure limit and the concentration is within the service limit of the canister.

- b. Atmospheric contaminate concentrations do not exceed IDLH levels.
- c. Atmospheric contaminants, liquid splashes, or other direct contact will not adversely affect the small area of the skin left unprotected by chemical-resistant clothing.
- d. Job functions do not require SCBA;
- e. Total readings register between background and 5 ppm above background as measured by instruments such as the FID or PID.
- f. Oxygen concentration is not less than 19.5% by volume.
- g. Air will be monitored continuously.

### **3. Guidance on Selection Criteria**

Level C protection is distinguished from Level B by the equipment used to protect the respiratory system, assuming the same type of chemical-resistant clothing is used. The main selection criterion for Level C is that conditions permit wearing air-purifying devices. The air-purifying device must be a full-face mask (MSHA/NIOSH approved) equipped with a cartridge suspended from the chin or on a harness. Cartridges must be able to remove the substances encountered.

A full-face air purifying mask can be used only if:

- a. Oxygen content of the atmosphere is at least 19.5% by volume;
- b. Substance(s) is identified and its concentration(s) measured;
- c. Substance(s) has adequate warning properties;
- d. Individual passes a qualitative fit-test for the mask; and
- e. Appropriate cartridge is used, and its service limits concentration is not exceeded.

An air-monitoring program is part of all response operations when atmospheric contamination is known or suspected. It is particularly important that the air be monitored thoroughly when personnel are wearing air-purifying respirators (Level C). Continual surveillance using direct reading instruments and air sampling is needed to detect any changes in air quality necessitating a higher level of respiratory protection. Total unidentified vapor/gas

concentrations exceeding 5 ppm above background required Level B.

## **5.4 Level D Protection**

### **1. PPE**

- a. Coveralls, chemical-resistant;
- b. Gloves (outer), chemical resistant;
- c. Gloves (inner), chemical-resistant\*;
- d. Boots (inner), leather work shoes with steel toes and shank;
- e. Boots (outer), chemical-resistant (disposable)\*;
- f. Hard hat;
- g. Face shield\*;
- h. Safety glasses with side shields or chemical splash goggles\*; and
- i. Taping between suit and boots, and suit and gloves.

\* Optional

### **2. Criteria for Selection**

- a. No atmospheric contamination is present.
- b. Direct reading instruments do not indicate any readings above background.
- c. Job functions have been determined not to require respirator protection.

### **3. Guidance on Selection Criteria**

Level C protection is distinguished from Level D protection in the requirement for respiratory protection. Level D is used for non-intrusive activities or intrusive activities with continuous air monitoring. It can be worn only in areas where there is no possibility of contact with contamination.

## 6.0 TEMPERATURE EXTREMES

### 6.1 Heat Stress

Site personnel who wear protective clothing allow body heat to be accumulated with an elevation of the body temperature. Heat cramps, heat exhaustion, and heat stroke can be experienced, which, if not remedied, can threaten life or health. Therefore an American Red Cross Standard First Aid book or equivalent will be maintained on site at all time so that the SO and site personnel will be able to recognize symptoms of heat emergencies and be capable of controlling the problem. When protective clothing is worn, especially Levels A and B, the suggested guidelines for ambient temperature and maximum wearing time per excursion are:

Ambient Temperature (F)	Max. Wearing Time per Excursion (min)
Above 90	15
85 to 90	30
80 to 85	60
70 to 80	90
60 to 70	120
50 to 60	180

One method of measuring the effectiveness of employees' rest-recovery regime is by monitoring the heart rate. The Brouha guideline is one such method.

- During a three minute period, count the pulse rate for at least 30 seconds of the first minute, the last 30 seconds of the second minute, and the last 30 seconds of the third minute.
- Double the count.

If the recover pulse rate during the last thirty seconds of the first minute is at 110 beats/minute or less and the deceleration between the first, second, and third minutes is at least 10 beats/minute, the work-recovery regime is acceptable. If the employee's rate is above that specified, a longer rest period is required, accompanied by an increased intake of fluids.

In the case of heat cramps or heat exhaustion, "pediolite" or its equivalent is suggested as part of the treatment regime. The reason for this type of liquid refreshment is that such beverages will return much needed electrolytes to the system. Without these electrolytes, body systems cannot function properly, thereby increasing the represented health hazard. Also in the more extreme instances, inundation with cool water is recommended to lower the body temperature as rapidly as possible.

This liquid refreshment will be stored in a cooler at the edge of the decontamination zone in plastic squeeze bottles. The plastic bottle will be marked with the individual's names. Disposable cups with lids and straws may be used in place of the squeeze bottles. Prior to drinking within the decontamination zone, the project personnel shall follow the following decontamination procedures:

- A. Personnel shall wash and rinse their outer gloves and remove them.
- B. Personnel shall remove their hard hats and respirators and place on table.
- C. Personnel shall remove their inner gloves and place them on table.
- D. Personnel shall wash and rinse their face and hands.
- E. Personnel shall carefully remove their personal bottle or cup from the cooler to ensure that their outer clothes do not touch any bottle, cups, etc.
- F. The used bottle or cups will not be returned to the cooler, but will be placed in a receptacle or container to be cleaned or disposed of.
- G. Personnel shall replace their respirators, hard hats gloves and tape gloves prior to re-entering the hazardous zone.

When personnel are working in situations where the ambient temperatures and humidity are high--and especially in situations where protection Levels A, B, and C are required the must:

- Assure that all employees drink plenty of fluids ("Pediolite or its equivalent);
- Assure that frequent breaks are scheduled so overheating does not occur; and,
- Revise work schedules, when necessary, to take advantage of the cooler parts of the day (i.e., 5:00 a.m. to 1:00 p.m., and 6:00 p.m. to nightfall).

## **6.2 Cold Stress**

Whole-body protection shall be provided to all site personnel that have prolonged exposure to cold air. The right kind of protective clothing shall be provided to site personnel to prevent cold stress. The following dry clothing shall be provided by the Contractor as deemed necessary by the SO:

- Appropriate underclothing (wool or other);
- Outer coats that repel wind and moisture;
- Face, head, and ear coverings;
- Extra pair of socks;
- Insulated safety boots; and
- Glove liners (wool) or wind-and water repellent gloves.

The SO will use the equivalent chill temperature when determining the combined cooling effect of wind and low temperatures on exposed skin or when determining clothing insulation requirements.

Site personnel working continuously in the cold are required to warm themselves on a regular basis. Warm, sweet drinks will also be provided to site personnel to prevent dehydration. The SO will follow the work practices and recommendations for cold stress threshold limit values as stated by the 1991-1992 Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices by the American Conference of Governmental Industrial Hygienists or equivalent cold stress prevention methods.

## **7.0 MEDICAL MONITORING REQUIREMENTS**

All personnel and visitors entering an exclusion zone or decontamination zone must have completed appropriate medical monitoring requirements required under OSHA 29 CFR 1910.120(f). Medical monitoring enables a physician to monitor each employee's health and physical condition, fitness to wear respiratory protective equipment, and fitness to carry out on-site tasks.

If there are additional medical monitoring requirements for a site, evidence of compliance must be included. Documentation of ESPL personnel medical monitoring is maintained on file and summarized in Table 1-1. Subcontractors working on the job must provide the site safety officer with documentation on their medical monitoring programs.

### **7.1 Fit-Testing Requirements**

All personnel and visitors entering an exclusion zone or decontamination zone using a negative pressure air purifying respirator (APR) must have successfully passed a qualitative respirator fit-test in accordance with OSHA 29 CFR 1910.134 or the American National Standards Institute.

Documenting fit-testing is the responsibility of each subcontractor. Documentation of ESPL personnel fit-testing is maintained on file and summarized in Table 1-1.

## 8.0 AIR MONITORING

According to 29 CFR 1910.120(h) air shall be monitored to identify and quantify levels of airborne hazardous substances and health hazards, and to determine the appropriate level of worker protection.

Air may be monitored for oxygen content, explosive levels (LEL), quantitative and qualitative toxic gas levels. Portable gas monitors will be used based on the hazard assessment. This section describes the type, purpose and method of air monitoring to be used on site.

### 8.1 Routine Air Monitoring Requirements

Type of Air Monitor to be used  
MSA Four GAS Meter

Purpose  
To monitor oxygen content, explosive levels (LEL), quantitative and qualitative toxic gas levels.

Method (continuous or periodic)  
Continuous

Method of Maintenance and Calibration  
Annual Calibration by Manufacture

Maintenance and Calibration Log  
Date of Last Maintenance

Date of Last Calibration

\_\_\_\_\_  
\_\_\_\_\_

\_\_\_\_\_  
\_\_\_\_\_

Air will be monitored when any of the following conditions apply within the exclusion zone:

- Initial site entry;
- A potential IDLH condition or flammable atmosphere has developed;
- Work begins on another portion of the site;
- Contaminants, other than those previously identified, have been discovered;
- Each time a different task or activity is initiated; or
- During trenching and/or excavation work.

All air monitoring data will be documented in a site log book by the Site Safety Officer. Air monitoring instruments will be calibrated and maintained in accordance with the manufacturer's specifications.

Below are guidelines for actions to be taken based on routine air monitoring within the exclusion zone if the hazard assessment warrants. These are:

Oxygen readings between 19.5% and 25%: continue.

Oxygen readings <19.5%: SCBA required, CGI not reliable.

Oxygen readings >25%: exit.

CGI readings of <10% LEL: continue

CGI readings of 10 to 20% LEL: proceed with caution

CGI readings >20% LEL: exit.

OVA/Microtip readings for VOCs sustained between background and 5 ppm over site specific background in breathing zone:

Continue OVA/Microtip readings for VOCs sustained between 5 and 10 ppm over site-specific background in breathing zone: Level C PPE. (See Note)

OVA/Microtip readings for VOCs >10 ppm over site-specific background in breathing zone: Level B PPE.

Note: To ensure readings are not generated by methane, screen vapors with a PID. If the PID reading is less than 5 ppm continue work (assume vapors are methane). If PID readings are over 5 ppm allow the work zone to vent. If PID and OVA reading continue to persist over 5 ppm screen the area with compound specific detector tubes for vinyl chloride and benzene. If these compounds are not present then level C can be worn.

## **9.0 SITE CONTROL AND STANDARD OPERATING PROCEDURES**

### **9.1 Work Zones**

The primary purpose for site controls is to establish the perimeter of a hazardous area, to reduce migration of contaminants into clean areas, and to prevent access or exposure to hazardous materials by unauthorized persons. The Project Superintendent shall designate an exclusion zone, a decontamination zone, and a support zone. These zones will float (move around the site) depending on the tasks being performed on any given day. The Site Safety Officer will outline these locations during the daily site safety meetings. This information shall be recorded by the Site Safety Officer in the site log.

Tasks requiring the OSHA 40-hour Hazardous Waste Operations and Emergency Response Operations training are carried out in the exclusion zone. The exclusion zone will be defined by the Site Safety Officer but will typically be a 50-foot area around work activities.

Protective equipment shall be removed within the decontamination zone. Disposable protective equipment shall be stored in receptacles staged in the decontamination zone, and non-disposable equipment will be decontaminated according to the procedures outlined in Section 10.0. All personnel and equipment will exit the exclusion zone through the decontamination zone. If, during certain steps of the work, a decontamination trailer is provided, first aid equipment, an eye wash unit, and drinking water shall be kept in the decontamination trailer.

The support zone will be used for the office trailers, for vehicle parking, daily safety meetings, and supply storage. Eating, drinking, and smoking are permitted only in the support zone. When a decontamination trailer is not provided, the eye wash unit, first aid equipment, and drinking water shall be kept at the command post. Gross decontamination (as determined by the site Health and Safety Officer) will be conducted in the exclusion zone, all other decontamination will be performed in the decontamination trailer. This HASP, HASP attachments, a site map indicating the three work zones, and a telephone will be kept in a designated office trailer. An eyewash and fire extinguisher shall be kept in the decontamination trailer or the command post.

### **9.2 General Field Safety and Standard Operating Procedures**

ESPL's policy is to control hazards for all site areas by limiting entrance to exclusion zones to essential personnel, and by implementing the following:

- Non-essential (as judged by the Site Safety Officer) personnel and unauthorized persons will not enter the exclusion or decontamination zone.

- Before entering the exclusion or decontamination zones, all personnel must be familiar with emergency response procedures (Section 11.0), site safety locations, first aid and communication equipment, and the locations of the map to the hospital and the list of emergency telephone numbers.
- Before entering the exclusion or decontamination zones, all personnel must be familiar with emergency response procedures (Section 11.0), site safety locations, first aid and communication equipment, and the locations of the map to the hospital and the list of emergency telephone numbers.
- The buddy system will be used at all times by field personnel in the exclusion zone; no one is to perform work within the exclusion zone alone. When in Level D or C, visual contact or radio contact shall be maintained at all times. In Level A or B, visual contact shall be maintained at all times, and radio contact shall be maintained with the decontamination and/or support zone.
- Contact with contaminated and potentially contaminated surfaces should be avoided. Walk around (not through) puddles and discolored surfaces. Do not kneel on the ground or set equipment on the ground. Protect equipment from contamination.
- All personnel exiting the exclusion zone must exercise the decontamination procedures described in Section 11.0 of this HASP.
- Beards or other facial hair that interferes with respirator fit will preclude admission to the exclusion zone. Contact lenses shall not be worn in the exclusion or decontamination zones, or if the worker may be expected to enter these zones under routine or emergency situations.
- Eating, drinking, or smoking is permitted only in designated areas in the support zone.
- Each worker must be supplied with and maintain his/her own personal protective equipment.

Note: These policies will be enforced by the ESPL Site Safety Officer with the delegated power of the Principal in Charge.

## 10.0 DECONTAMINATION PROCEDURES

The standard level D decontamination protocol shall be used in the decontamination zone.

All equipment and PPE exiting the exclusion zone must be decontaminated or properly discarded upon exit. All personnel must enter and exit the exclusion zone through the decontamination area. Due to the nature of the site work, the exclusion and decontamination zones may change. Plastic bags containing personal protective clothing and equipment will be placed in designated receptacles.

All boots and other potentially contaminated garments that have come in contact with the MSW will be cleaned in wash tubs with detergent/water solution and rinsed with water and must remain on site at all times. The wash water, rinse water, and residues will be collected and properly stored until sampling results are received and the final method of disposal can be determined. Disposable PPE, including spent respirator cartridges and canisters, will be properly bagged and disposed of. All contaminated boots, clothing, and equipment (e.g. leather boots, equipment carrying straps) that cannot be decontaminated will be disposed of with the disposable garments or left on site in the decontamination trailer.

Heavy equipment will be decontaminated on a pad constructed of concrete or plastic sheeting that will allow water and residues to be collected in a trench. The decontamination water and residues will be drummed, sealed, and properly stored on-site to await proper disposal. The pad will serve a dual purpose, for decontamination, and to stop equipment leaving the site from tracking materials off site.

The **minimum** measures for Level B doffing and decontamination are:

- Deposit equipment used on site on plastic drop cloths;
- Scrub outer boots and gloves with a water and detergent solution and rinse off;
- Remove outer boots and outer gloves. Discard disposable outer garments in receptacle provided;
- Remove SCBA and face piece and place on rack provided;
- Remove tyvek/outer garment and place in receptacle provided;
- Remove inner gloves and deposit in receptacle provided; and
- Shower/wash face and hands.

The **minimum** measures for Level C doffing and decontamination are:

- Deposit equipment used on site on plastic drop cloths;
- Scrub outer boots and gloves (if worn) with a water and detergent solution and rinse off;
- Remove outer boots and outer gloves. Discard disposable outer garments in receptacle provided;
- Remove tyvek/outer garment and place in receptacle provided;
- Remove first pair of inner gloves;
- Remove respirator (using "clean" inner gloves) and place on rack provided;
- Remove last pair of inner gloves and deposit in receptacle provided; and,
- Shower/wash face and hands

The second to last item to be removed should be the APR, and the last item to be removed should be the last of several pairs of surgical gloves. Wearing several pairs of inner gloves permits layers to be removed as needed during various stages of the doffing procedure, and if the APR inadvertently becomes contaminated, inner gloves guard against bare hands contacting the APR.

## **11.0 CONTINGENCY PLAN/EMERGENCY RESPONSE PLAN**

Site personnel must be prepared in the event of an emergency. Emergencies can take many forms: illnesses, injuries, chemical exposure, fires, explosions, spills, leaks, releases of harmful contaminants, or sudden changes in the weather.

**Emergency telephone numbers and a map to the hospital will be posted in the command post.** Site personnel should be familiar with the emergency procedures, and the locations of site safety, first aid, and communication equipment.

### **11.1 Emergency Equipment On-Site / Site Communications**

<b>Type</b>	<b>Location</b>
Private Telephones:	Site personnel
Two-Way Radios:	Site personnel, if required
Emergency Alarms	On-site vehicle horns*
First Aid Kits:	On-site
Fire Extinguisher:	On-site

\* Horns: Air horns will be supplied to personnel at the discretion of the Project Superintendent or Site Safety Officer.

### 11.2 Emergency Telephone Numbers and Hospital Information

Police	911
Fire and Ambulance	911
Local Hospital(Beth Israel Medical Center)	(212) 420-2000
Local Health Department	(212) 865-1951
NYS Health Department	(518) 458-6309
National Response Center	(800) 424-8802
Poison Control	(800) 282-3171
Chemical Emergency Advice	(800) 424-9300
NYSDEC	(718) 482-4634
ESPL Environmental	(212) 330-7501

### 11.3 Personnel Responsibilities During an Emergency

The **Project Superintendent** is primarily responsible for responding to and correcting emergency situations. However, in the absence of the Project Superintendent, the **Safety Officer** shall act as the Project Superintendent's on-site designee, and perform the following tasks:

- Take appropriate measures to protect personnel including: withdrawal from the exclusion zone, total evacuation and securing of the site, or upgrading or downgrading the level of protective clothing and respiratory protection;
- Ensure that appropriate federal, state, and local agencies are informed, and emergency response plans are coordinated; In the event of fire or explosion, the local fire department should be summoned immediately. If toxic materials are released to the air, the local authorities should be informed in order to assess the need for evacuation;
- Ensure appropriate decontamination, treatment, or testing for exposed or injured personnel;
- Determine the cause of the incident and make recommendations to prevent recurrence; and,
- Ensure that all required reports have been prepared.

The emergency coordinators for this work are:

Project Superintendent - Margaret Tavares (646-772-8820)

#### **11.4 Medical Emergencies**

Any person who becomes ill or injured in the exclusion zone must be decontaminated to the maximum extent possible. If the injury or illness is minor, full decontamination should be completed and first aid administered prior to transport. First aid should be administered while awaiting an ambulance or paramedics.

#### **11.5 Fire or Explosion**

In the event of a fire or explosion, the local fire department should be summoned immediately. The Project Superintendent or his designated alternate will advise the fire commander of the location, nature and identification of the hazardous materials on-site. If it is safe to do so, site personnel may:

- Use fire fighting equipment available on site; or,
- Remove or isolate flammable or other hazardous materials that may contribute to the fire.

#### **11.6 Evacuation Routes**

Evacuation routes established by work area locations for this site will be highlighted on a site map and periodically reviewed during the daily safety meetings. As the work areas change, the evacuation route and map will be altered accordingly, and the new route will be reviewed during the daily safety meetings.

Under extreme emergency conditions, evacuation should be conducted immediately, without regard for equipment. The evacuation signal will be a continuous blast of a vehicle horn, if possible, and/or by verbal/radio communication. When evacuating the site, personnel shall follow these instructions:

- Keep upwind of smoke, vapors, or spill location.
- Exit through the decontamination corridor if possible.
- If evacuation through the decontamination corridor is not possible, site personnel should remove contaminated clothing once they are in a safe location and leave it near the exclusion zone or in a safe place.
- The Project Superintendent or Site Safety Officer will conduct a head count to ensure that all personnel have been evacuated safely. The

head count will be correlated to the site and/or exclusion zone entry/exit log.

- If emergency site evacuation is necessary, all personnel are to escape the emergency situation and decontaminate to the maximum extent practical.

### **11.7 Spill Control Procedures**

In the event of a leak or a release, site personnel will:

- Inform their supervisor immediately;
- Locate the source of the spillage and stop the flow if it can be done safely; and,
- Begin containment and recovery of the spilled materials.

Equipment on-site shall be sufficient to handle any spills. Equipment shall be diked and containerized appropriately. Field monitoring equipment and spill control equipment are shown in Table 11-1.

### **11.8 Vapor Release Plan**

The site work will be suspended if air monitoring at the site perimeter shows air contaminants above acceptable concentrations. Off-site readings will be taken within 20 feet of the nearest residential or commercial property. If efforts to mitigate the emission source are unsuccessful for 30 minutes then the ESPL Site Safety Officer will:

- contact the local police,
- continue to monitor air every 30 minutes, 20 feet from the closest off-site property. If two successive readings are within acceptable levels, off-site air monitoring, would be halted.

All property line and off-site air monitoring locations and results associated with vapor releases shall be recorded in the site safety log book.

### **11.9 Communication Procedures**

Type of communication to be used:  
(i.e. cellular phone, Two-way radio, etc.)

Cell phones

The following standard hand signals will be used in case of failure of communication equipment:

Hand gripping throat .....	Out of air, can't breathe
Grip partners wrist or both hands around waist.....	Leave area immediately
Hand on top of head.....	Need assistance
Thumbs up.....	OK, I am all right, I understand
Thumbs down.....	No, negative

TABLE 11-1  
FIELD EQUIPMENT/SPILL CONTROL EQUIPMENT

Equipment	Location/Use

## 12.0 CONFINED SPACE

On January 14, 1993, OSHA published its Final Rule on permit required confined spaces for General Industry at 29CFR 1910.146 et seq., with an implementation date of April 15, 1993. The rule specifically excludes agriculture, construction, or shipyard employment, but prudence requires that this HASP cover confined space entry and the OSHA rule will be followed. OSHA defines confined space as:

1. is large enough and so configured that an employee can bodily enter and perform assigned work;
2. has limited or restricted areas for entry or exit (for example, tanks, vessels, silos, storage bins, hoppers, vaults, and pits are spaces that may have limited entry); and
3. is not designed for continuous employee occupancy.

OSHA further requires that an "entry supervisor" (the site safety officer) decides at the time of entry whether the space is permit required or non-permit required space. Once designated the site safety officer will monitor the space two hours prior to entry and continuously during work to ensure that the atmosphere is not hazardous. OSHA defines as hazardous atmosphere as:

1. Flammable gas, vapor, or mist in excess of 10 percent of its lower explosive limit (LEL);
2. Airborne combustible dust at a concentration that meets or exceeds its LEL;  
NOTE: This concentration may be approximated as a condition in which the dust obscures vision at a distance of 5 feet (1.52 m) or less.
3. Atmospheric oxygen concentration below 19.5 percent or above 23.5 percent
4. Atmospheric concentration of any substance for which a dose or a permissible exposure limit is published in Subpart G, Occupational Health and Environmental Control, or in Subpart Z. Toxic and Hazardous Substances, of this part and which could result in employee exposure in excess of its dose or permissible exposure limit;
5. Any other atmospheric condition that is immediately dangerous to life or health.

The space is non-permit required if none of the above defined hazardous conditions are present. OSHA requires an attendant (e.g., an individual stationed outside one

or more spaces who monitors the entrants and who performs air monitoring of the space(s) be assigned for each space. The attendant is not allowed to perform any rescue duties but simply must communicate with the entrant and call for coordinates rescue procedures if required.

### **12.1 Confined Space Entry Procedure**

Confined space entry that will require a permit may be required during construction at the site. If the Site Safety Officer determines that an excavation meets the definition of a confined space then natural or mechanical ventilation will be employed to ensure that the space meets the requirements of non-permit required confined space. The Site Safety Officer will perform continuous air monitoring one hour before and during entry work to ensure that the space remains non-permit required.

A confined space entry permit must be filled out and signed by the Site Safety Officer. By signing this, the supervisor certifies that the space does not contain a hazardous atmosphere, and that the atmosphere will be monitored.

A confined space entry permit form is located in New York State Department of Labor, Employer Guide and Model (Permit Required Confined Space Entry Plan (29 CFR Part 1910.146) located at the end of this section or at the ESPL office. This permit will be modified by the Site Safety Officer for different confined spaces.

Blowers will be utilized to ventilate the space.

When workers are in the excavation, the space must be continuously monitored for the hazardous atmosphere parameters using appropriate instrumentation. The Site Safety Officer or delegee must log the meter readings every 30 minutes while the confined space is occupied.

If a hazardous atmosphere is detected, employees must leave confined space until monitoring shows that there is no atmosphere hazard. Engineering controls will be used to dissipate the atmosphere if it does not dissipate naturally.

### **13.0 DAILY SAFETY MEETINGS**

Safety or pre-entry meetings will be held each day before work begins, to ensure that all on-site personnel understand site conditions and operating procedures, and to address safety questions and concerns. The Site Safety Officer or the Project Superintendent will lead the meetings. All personnel trained and prepared to enter exclusion and decontamination zones will attend the meetings.

The site safety officer shall maintain a log of each meeting.

## 14.0 WORK PLAN

### 14.1 Work Tasks, Objectives and Methods for Implementation

(Describe specifically who will be working on tasks to be performed and their functions)

**Margaret Tavares**, overall site supervisor to coordinate all field activities related to environmental investigations.

**Margaret Tavares**, site health and safety officer to coordinate and ensure compliance to all site-specific safety plans.

Location of Exclusion, Decontamination and Support Zones. (Include a location drawing if necessary)

---

---

---

### 14.2 Clean Up / Decontamination Activities and Procedures

(Describe specifically who will be working on tasks to be performed and their functions)

FieldSupervisor\_\_\_\_\_

---

---

---

### 14.3 Informational Programs

To ensure that employees, contractors, and subcontractors (or their representatives) are aware of this plan all persons engaged in operations at this site must sign the Site Personnel Form indicating that they are familiar with this Site Health and Safety Plan prior to commencing operations.

#### Site Personnel Log

I have reviewed and am familiar with the Site Health and Safety Plan for the following site:

**335 Grand Concourse  
335 Grand Concourse  
Bronx , New York**

Name	Company or Affiliation	Date	Remarks

**14.4 Medical Surveillance Program**

Refer to Section 7.0

**14.5 Personnel Requirements**

Refer to Section 2.0

**14.6 - Training Implementation**

Refer to Section 4.0

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

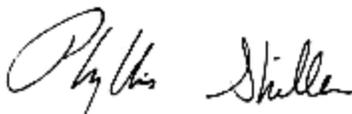

**Semi-Volatile Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatiles analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

3 = This parameter exceeds laboratory specified limits.

B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected

BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

**Semi-Volatile Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

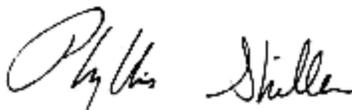

**Volatile Comment:**

Poor surrogate recovery was observed for volatiles due to matrix interference. Sample was analyzed twice with similar results.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
B = Present in blank, no bias suspected.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
BRL=Below Reporting Level

**Comments:**

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

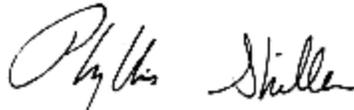

Please be advised that the NY unrestricted soil criteria for chromium is based on hexavalent chromium and trivalent chromium.

**Semi-Volatile Comment:**

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.  
This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.  
 3 = This parameter exceeds laboratory specified limits.  
 B\* = Present in blank, a bias is possible.

RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected  
 BRL=Below Reporting Level LOD=Limit of Detection MDL=Method Detection Limit

**Comments:**

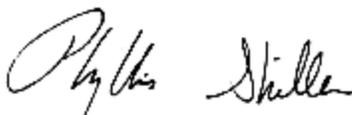

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Volatile Comment:  
 Elevated reporting limits due to the foamy nature of the sample.

Semi-Volatile Comment:  
 One of the surrogate recoveries was above the upper range due to sample matrix interference. The other surrogates associated with this sample were within QA/QC criteria. No significant bias is suspected.

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the pesticide analysis.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comment:

A LCS and LCSD duplicate were performed instead of a MS and MSD. Alpha and gamma chlordane were spiked and analyzed instead of technical chlordane. Gamma chlordane recovery is reported in the LCS, LCSD, MS and MSD.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

\*\*\* No Data to Display \*\*\*

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.
