CERTIFICATION

I, Kimberly Somers, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the Redevelopment Project located at 138 North 10th Street, Brooklyn, NY, (OER Project Number 15EH-N348K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 138 – 142 North 10th Street in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2304, Lots 12, 13 and 15 on the New York City Tax Map. The street address associated with the Site is 138-142 North 10th Street, Brooklyn, New York. Figure 1 shows the Site location. The lots are rectangular shaped and approximately 5,625 square feet (s.f.) with approximately 54 feet of street frontage on North 10th Street. The Site is located on the south side of North 10th Street between Berry Street and Bedford Avenue and is bordered by North 10th Street to the north; and residential buildings to the east, south and west. A map of the site boundary is shown on Figure 2.

The Site is presently undeveloped and in use for storage of equipment and supplies associated with Apple Restoration and Waterproofing.

Summary of Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 6-story residential apartment building with a full cellar level. The building will cover the north 80.5 ft of the lot, leaving 19.5 ft of rear yard space, and will have a full height basement level beneath the entire building footprint. Excavation for the cellar level will extend to an average depth of approximately 12 feet below grade. The cellar level will consist of a mechanical area, as well as tenant's storage, elevator, stairwells, two recreation rooms, and two bathrooms. The first floor will consist of the residential lobby, two tenant one-car parking garages, and two residential apartments. Floors 2 through 6 will consist of residential apartments.

The building and cellar will cover 4,480 square feet of the lot and will require excavation to a depth of at approximately 11.5 feet below grade; therefore, an estimated 1,908 cubic yards

(1,431 tons) of soil will require excavation for the new building's cellar. The water table is expected at approximately 20 feet below grade surface (bgs), and will not be encountered during excavation.

Layout of the redevelopment plans for the cellar level as well as the proposed building's front elevation drawing are presented in Figure 3. The current zoning designation is R6A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

A Phase I Environmental Site Assessment was performed by an Environmental Professional from EBC on August 23, 2013. The Phase I Report noted no recognized environmental conditions in connection with the Site; however, the following environmental concerns were identified:

- The Site is listed with a Hazmat / Noise “E” restriction (E-138) with the descriptions of “underground gasoline storage tank testing protocol” and window wall attenuation and alternate ventilation”. Nearly any development scenario for the Site will be subject to the E-designation Environmental Review Program administered by the NYCOER.

EBC recommended a Phase II Subsurface Investigation at the Site to include the collection and analysis of surface and subsurface soil samples, groundwater samples, and soil vapor samples.

As part of the Phase I, EBC conducted a review of Sanborn maps provided by Environmental Data Resources (EDR) for 138-142 North 10th Street, utilizing Sanborn Maps dated from 1887 through 2007. The following Site history was established based on historic Sanborn maps:

The Site was originally developed in 1905 with three, three-story residential buildings until approximately 1982. The Site appears to have been comprised of three vacant lots for the years 1982 through 2007. Sanborn maps identify the Site as a parking area for trucks for the years 1982 through 2007. Sanborn maps identify the Site as a parking area for trucks for the years 1983 through 1987. Sanborn maps dated 1988 through 2007 identify the Site as a vacant undeveloped lot in use for rag storage. No gasoline tanks were identified for the Site on the Sanborn maps.

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 4 feet; and
2. The Site was utilized as truck parking lot for the years 1983 through 1987.

Summary of the Work Performed under the Remedial Investigation

EBC performed the following scope of work at the Site in December of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the Site, and collected ten soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed four soil gas implants and collected four soil gas samples for chemical analysis.

Summary of Environmental Findings

1. The elevation of the Site is approximately 27 feet above mean sea level.
2. Depth to groundwater is estimated to be approximately 20 feet below sidewalk grade.
3. Groundwater flow is generally north.
4. Depth to bedrock at the Site is greater than 100 feet.
5. The stratigraphy of the Site from the surface down consists of historic fill material to depths as great as 4 feet, underlain by native brown sand with gravel.
6. Ten soil/fill samples were collected and their results were compared to NYSDEC Unrestricted Use Soil Cleanup Objectives and Restricted Residential Use Soil Cleanup Objectives as presented in 6NYCRR Part 375-6.8 and CP51. Soil/fill samples detected one VOC, acetone (190 µg/kg) in one shallow soil sample at concentration exceeding Unrestricted Use SCOs. Several other VOCs were detected at trace concentrations. Six SVOCs, including benz(a)anthracene (max. of 21,000 µg/kg), benzo(a)pyrene (max. of 17,000 µg/kg), benzo(b)fluoranthene (max. of 24,000 µg/kg), benzo(k)fluoranthene (7,600 µg/kg), chrysene (max. of 19,000 µg/kg), and indeno(1,2,3-cd)pyrene (6,100 µg/kg), were detected above Restricted Residential Use SCOs within all five of the shallow soil samples and two of the subsurface samples that extended to four feet deep.

All SVOCs in deeper soils (12-14 feet bgs) were below Unrestricted Use SCOs. Pesticides 4'4'-DDD (max. 510 µg/kg), 4'4'-DDE (94 µg/kg), 4'4'-DDT (2,000 µg/kg) and Dieldrin (180 µg/kg) were detected above UUSCOs in shallow soils in two borings (B1 and B2). Several metals including barium (837 µg/kg), chromium (max. of 34.6 mg/kg), copper (max. of 71.7 mg/kg), lead (max. of 1,170 mg/kg), mercury (max. of 0.69 mg/kg), and zinc (max. of 480 mg/kg) exceeded Unrestricted Use SCOs within shallow soil samples. Of these metals, barium and lead also exceeded Restricted Residential Use SCOs. No metals exceeded Restricted Residential SCOs in deeper soil samples. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

7. Three groundwater samples results were compared to New York State 6NYCRR Part 703.5 Class GA groundwater quality standards (GQS). Groundwater samples showed no PCBs or pesticides at detectable concentrations. Several VOCs were identified at trace concentrations and all were below their respective GQSs. Five SVOCs, including benz(a)anthracene (max. of 0.91 µg/L), benzo(b)fluoranthene (max. of 1.2 µg/L), benzo(k)fluoranthene (max. of 0.49 µg/L), and chrysene (0.9 µg/L) and indeno(1,2,3-cd)pyrene (max. of 0.43 µg/L) were detected above GQS in two groundwater samples. Several metals were identified, but iron (0.89 mg/L), manganese (max. of 4.77 mg/L) and sodium (max. of 81.1 mg/L) exceeded their respective GQS.
8. Soil vapor results collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006. Total concentrations of petroleum-related VOCs (BTEX) ranged from 30.25 µg/m³ to 332.28 µg/m³. Most compounds were detected below 100 µg/m³ except for acetone at 261 µg/m³ and hexane at 2700 µg/m³. The CVOC trichloroethylene (TCE) was detected in three of the soil gas samples, but at levels below the guidance value. Tetrachloroethylene was detected in all four soil gas samples ranging in concentration from 0.407 µg/m³ to 2.17 µg/m³. Carbon tetrachloride (maximum of 0.88 µg/m³) was detected in all four soil gas samples. 1,1,1-trichloroethane (maximum of 53.4 µg/m³) was detected in all four soil gas samples. The concentrations of all chlorinated compounds were below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Eastern Capital Group has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.04-acre Site located at 138 -142 North 10th Street in the Williamsburg section of Brooklyn, New York. The Site will be redeveloped with a 6-story residential apartment building with a full cellar level. The portion of the RI work conducted on the Site was conducted in December of 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 138 – 142 North 10th Street in the Williamsburg section of Brooklyn, New York, and is currently identified as Block 2304, Lots 12, 13 and 14 on the New York City Tax Map. Figure 1 shows the Site location. The Site (Lots 12, 13 and 14) is a rectangular shaped parcel consisting of approximately 56 feet of street frontage on North 10th Street and a depth of approximately 100 feet for a total of approximately 5,625 ft². The Site is located on the south side of North 10th Street between Berry Street and Bedford Avenue, and is bordered by North 10th Street to the north; and residential buildings to the east, south and west. A map of the site boundary is shown on Figure 2.

The entire footprint of the Site (Lots 12, 13 and 14) is currently undeveloped and in use for storage of equipment and supplies associated with commercial use, “Apple Restoration and Waterproofing”.

1.2 Proposed Redevelopment Plan

The development project consists of redeveloping the lot with a new 6-story residential apartment building with a full cellar level. The building will cover the north 80.5 ft of the lot, leaving 19.5 ft of rear yard space, and will have a full height basement level beneath the entire

building footprint. Excavation for the cellar level will extend to an average depth of approximately 12 feet below grade. The cellar level will consist of a mechanical area, as well as tenant's storage, elevator, stairwells, two recreation rooms, and two bathrooms. The first floor will consist of the residential lobby, two tenant one-car parking garages, and two residential apartments. Floors 2 through 6 will consist of residential apartments.

The building and cellar will cover 4,480 square feet of the lot and will require excavation to a depth of at approximately 11.5 feet below grade; therefore, an estimated 1,908 cubic yards (1,431 tons) of soil will require excavation for the new building's cellar. The water table is expected at approximately 20 feet below grade surface (bgs), and will not be encountered during excavation. Layout of the redevelopment plans for the cellar level as well as the proposed building's front elevation drawing are presented in Figure 3. The current zoning designation is R6A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The area immediately surrounding Site consists of residential buildings to the east, south and west; and a mixed-use building to the north (across North 10th Street). Figure 4 shows the surrounding land usage of the adjacent properties listed below as well as additional properties located up to 500 feet away from the Site. No hospitals, schools or daycare facilities are located within a 250 ft radius of the Site.

Surrounding Property Usage

Direction	Property Description
North – Opposite side of N 10 th St.	<u>Block 2297, Lot 7502 – 125 North 10th Street</u> A 29,442 ft ² parcel developed with a 6-story mixed-use building.
South – Adjacent Properties	<u>Block 2304 Lots 34 and 35 – 137 through 139 North 9th Street</u> Two 2,500 ft ² wide lots each developed with a 3-story multi-family walk-up with rear yards behind each building.
East – Adjacent Property	<u>Block 2304, Lot 15 – 148 North 10th Street</u> A 7,500 ft ² lot developed with a 6-story residential building.
West – Adjacent Property	<u>Block 2304, Lot 10 – 136 North 10th Street</u> A 4,375 ft ² lot developed with a 2-story commercial/office building.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

A Phase I Environmental Site Assessment was performed by EBC on August 23, 2013. The Phase I Report noted no recognized environmental conditions in connection with the Site; however, the following environmental concerns were identified:

- The Site is listed with a Hazmat / Noise “E” restriction (E-138) with the descriptions of “underground gasoline storage tank testing protocol” and window wall attenuation and alternate ventilation”. Nearly any development scenario for the Site will be subject to the E-designation Environmental Review Program administered by the NYCOER.

EBC recommended a Phase II Subsurface Investigation at the Site to include the collection and analysis of surface and subsurface soil samples, groundwater samples, and soil vapor samples.

As part of the Phase I, EBC conducted a review of Sanborn maps provided by Environmental Data Resources (EDR) for 138-142 North 10th Street, utilizing Sanborn Maps dated from 1887 through 2007. The following Site history was established based on historic Sanborn maps:

The Site was originally developed in 1905 with three, three-story residential buildings until approximately 1982. The Site appears to have been comprised of three vacant lots for the years 1982 through 2007. Sanborn maps identify the Site as a parking area for trucks for the years 1983 through 1987. Sanborn maps dated 1988 through 2007 identify the Site as a vacant undeveloped lot in use for rag storage. No gasoline tanks were identified for the Site on the Sanborn maps.

2.2 Previous Investigations

A previous Phase I environmental site assessment was prepared for the Site by Soil Mechanics Environmental Services in February 1996. According to the report, the Site was occupied by a former refuse facility and site investigation revealed evidence of a partial basement, two (2) non-functional electric refuse lifts, one abandoned refuse truck, one abandoned forklift and large amounts of miscellaneous debris. In addition, numerous partially empty 5-gallon containers of

roof coating and oil-staining in two areas within the concrete flooring in the area surrounding the refuse truck were observed. The 1996 report concluded that there were no recognized environmental concerns in connection with the Site; however, it was recommended that proper removal and disposal of the refuse truck, fork lift, 5-gallon containers and onsite refuse was prudent, and that the oil-like spillage be cleaned. It should be noted that none of these items were identified by EBC during the 2013 inspection.

2.3 Site Inspection

Ms. Chawinie Miller of EBC performed a site inspection on August 23, 2013, beginning at approximately 12:30 pm. The reconnaissance included a visual inspection of the Site the sidewalk immediately in front of the Site, and the exterior of adjacent properties. During EBC's inspection, the Site is utilized as storage of equipment and supplies associated with Apple Restoration and Waterproofing and is not developed with a building. No evidence of aboveground or underground storage tanks were observed by ECB during the site inspection.

2.4 Areas of Concern

Areas of Concern (AOCs) identified for the Site include:

1. The presence of historic fill material to depths as great as 4 feet; and
2. The Site was utilized as truck parking lot for the years 1983 through 1987.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Ms. Kimberly Somers.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

EBC performed the following scope of work at the Site in December of 2014:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed five soil borings across the Site, and collected ten soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed three groundwater monitoring wells throughout the Site and collected three groundwater samples for chemical analysis to evaluate groundwater quality; and
4. Installed four soil gas implants and collected four soil gas samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not performed as a part of this assessment due to the fact that no underground storage tanks were identified on Sanborn maps; the Site was not listed as a State Petroleum Bulk Storage site in the environmental regulatory database; no evidence of underground storage tanks (e.g. vent pipe and fill ports) were observed by EBC during the site inspection; and the majority of the Site will be excavated to at least 12 feet below surface grade. This Site did not warrant the need for a geophysical investigation.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On December 4, 2014, three soil borings (B1 through B3) were installed in the approximate locations shown on Figure 5. The three soil boring locations were chosen to gain representative soil quality information across the Site. For each of the three soil borings, soil samples were collected continuously from grade to a final depth of 16 feet below existing grade using a five-foot steel macro-core sampler with acetate liners and Geoprobe direct-push equipment. Soil recovered from each of the soil borings was field screened for the presence of VOCs with a photoionization detector (PID) and visually inspected for evidence of contamination. No PID readings above background concentrations were detected. Soil samples were retained for laboratory analysis from the intervals 0 to 2 feet below grade from all five borings; from 3 to 4 feet below grade in two borings (B4 and B5); and from 14 to 16 feet below grade in three borings (B1 through B3).

Soil boring details are provided in Table 1. Boring logs were prepared by a Qualified Environmental Professional and are attached in Attachment B.

Groundwater Monitoring Well Construction

Three temporary 1-inch diameter PVC monitoring wells (MW1 through MW3) with 10 feet of 0.010 slot screen were installed by EBC at the approximate locations, shown on Figure 5, set to intersect the water table. Since groundwater was encountered at approximately 20 feet below grade, monitoring wells were installed to a depth of 25 feet. Monitoring well sampling details are provided in Table 1. Monitoring well locations are shown in Figure 5.

Survey

Soil borings, monitoring wells and soil gas sampling locations were located to the nearest 0.10 foot with respect to two or more permanent site features.

Water Level Measurement

Approximate groundwater level measurements were collected using a Solinst oil/water interface meter to ensure the surface of the water table was within the screened section of the monitoring well. No free product was observed within any of the three monitoring wells. Water level data is included in Table 1.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

Ten soil samples were collected for chemical analysis during this RI. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Tables 2, 3, 4 and 5. Figure 5 shows the location of samples collected during this RI. Laboratories and analytical methods for soil samples collected during the RI are shown below.

The ten soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted for analysis with proper chain of custody to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals.

Groundwater Sampling

Three groundwater samples were collected for chemical analysis during this RI. Groundwater samples were collected from the monitoring wells utilizing dedicated polyethylene tubing and a peristaltic pump. Groundwater samples were collected in pre-cleaned, laboratory supplied glassware, stored in a cooler with ice and submitted to Phoenix for analysis of VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082 and TAL metals. Groundwater sample collection data is reported in Tables 6 through 9. Sampling logs with information on purging and sampling of groundwater monitoring wells are included in Appendix C. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

Four soil vapor probes (SG1 through SG4) were installed and four soil vapor samples were collected for chemical analysis during this RI. The soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data is reported in Table 10, and the soil vapor sampling logs are included in Attachment D. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

All four soil vapor probes were installed using Geoprobe™ equipment and tooling. The approximate location of each of the soil vapor probes is shown on Figure 5. The vapor probes that were installed were the Geoprobe™ Model AT86 series, which are constructed of a 6-inch length of double woven stainless steel wire. The four soil vapor probes installed on December 4 and 5, 2014 were installed to a depth of 12 feet below grade. Each probe was attached to ¼ inch polyethylene tubing which extended approximately 18 inches beyond that needed to reach the surface. The tubing was capped with a ¼ inch plastic end to prevent the infiltration of foreign particles into the tube. Coarse sand was placed around the probe to a height of approximately 1 foot above the bottom of the probe. The remainder of the borehole was sealed with a bentonite slurry to the surface.

Soil vapor sampling for the soil vapor probes was conducted on December 8, 2014. Prior to sampling, each sampling location was tested to ensure a proper surface seal had been obtained. In accordance with NYSDOH guidance (NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York, February 2005), a tracer gas (helium) was used as a quality assurance/quality control device to verify the integrity of the sampling point seal prior to collecting the samples. Prior to testing and collecting samples, the surface immediately surrounding the polyethylene tubing of the vapor implant was sealed using a 1 foot by 1 foot square sheet of 2 mil HDPE plastic firmly adhered to a wetted layer of granular bentonite. The seal was then tested by enriching the air space above the seal with a tracer gas (helium) while continuously monitoring air drawn from the implant with a helium detector (Dielectric Model MGD-2002, Multi-Gas Detector) for a minimum of 15 minutes. The tracer gas test procedure was employed at all four soil vapor sampling locations. No surface seal leaks were observed at any of the locations.

Following verification that the surface seal was tight, one to three volumes (i.e., the volume of the sample probe and tube) of air was purged from the implant using a calibrated vacuum pump. After purging, a 6-liter Summa® canister, fitted with a 2-hour flow regulator, was attached to the surface tube of each of the four vapor implants. Prior to initiating sample collection, sample identification, canister number, date and start time were recorded on tags attached to each canister and in a bound field note book. Sampling then proceeded by fully opening the flow

control valve on each canister in turn. Immediately after opening the flow control valve on a canister, the initial vacuum (inches of mercury) was recorded in the field book and on the sample tag. When the vacuum level in the canister was between 5 and 8 inches of mercury (approximately 2 hours), the flow controller valve was closed, and the final vacuum recorded in the field notebook and on the sample tag.

The soil gas sample identification, date, start time, start vacuum, end time and end vacuum were recorded on tags attached to each canister and on a sample log sheet (Attachment D). Samples were submitted to Phoenix for laboratory analysis of VOCs EPA Method TO-15.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Phoenix Environmental Laboratories
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was Phoenix Environmental Laboratories
Chemical Analytical Methods	Soil and groundwater analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); Soil vapor analytical methods: <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 2 through 10. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Attachment E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site from the surface down consists of a layer of urban fill material that extends to depths as great as 4 feet below grade, underlain by native brown sand with gravel.

Hydrogeology

A table of water level data for monitoring wells MW1 through MW3 is included in Table 1. The average depth to groundwater is 20 feet and the range is depth is 19.41 feet to 20.03 feet. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 9. Groundwater flow is generally to the north.

5.2 Soil Chemistry

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Tables 2 through 5. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives.

Data collected during the RI showed no VOCs above Restricted Residential SCOs. One VOC, acetone (190 µg/kg) was detected above the Unrestricted Use SCO in one shallow soil sample. Six SVOCs, including benz(a)anthracene (max. of 21,000 µg/kg), benzo(a)pyrene (max. of 17,000 µg/kg), benzo(b)fluoranthene (max. of 24,000 µg/kg), benzo(k)fluoranthene (7,600 µg/kg), chrysene (max. of 19,000 µg/kg), and indeno(1,2,3-cd)pyrene (6,100 µg/kg), were detected above Restricted Residential Use SCOs within all five of the shallow soil samples and two of the subsurface samples that extended to four feet deep. All SVOCs in deeper soils (12-14 feet bgs) were below Unrestricted Use SCOs. Pesticides 4'4'-DDD (max. 510 µg/kg), 4'4'-DDE (94 µg/kg), 4'4'-DDT (2,000 µg/kg) and Dieldrin (180 µg/kg) were detected above UUSCOs in shallow soils in two borings (B1 and B2). Several metals including chromium (max. of 34.6 mg/kg), copper (max. of 71.7 mg/kg), lead (max. of 274 mg/kg), mercury (max. of 0.69 mg/kg), and zinc (max. of 480 mg/kg) exceeded Unrestricted Use SCOs within shallow soil samples. Of

these metals, lead (1,170 µg/kg) also exceeded Restricted Residential Use SCOs in one shallow soil sample. Barium (837 µg/kg) exceeded Restricted Residential Use SCOs in two shallow soil samples. Chromium (34.6 µg/kg) was detected above the Unrestricted Use SCO in one deep soil sample. Overall, the soil results were consistent with data identified at sites with urban fill material in NYC.

5.3 Groundwater Chemistry

Groundwater samples collected during the RI showed no PCBs or pesticides at detectable concentrations. No VOCs were detected above GQS. Five SVOCs, including benz(a)anthracene (max. of 0.91 µg/L), benzo(b)fluoranthene (max. of 1.2 µg/L), benzo(k)fluoranthene (max. of 0.49 µg/L), and chrysene (0.9 µg/L) and indeno(1,2,3-cd)pyrene (max. of 0.43 µg/L) were detected above GQS in two groundwater samples. Several metals were identified, but iron (0.89 mg/L), manganese (max. of 4.77 mg/L) and sodium (max. of 81.1 mg/L) exceeded their respective GQS.

5.4 Soil Vapor Chemistry

Data collected during the RI indicated Total concentrations of petroleum-related VOCs (BTEX) ranged from 30.25 µg/m³ to 332.28 µg/m³. The CVOC trichloroethylene (TCE) was detected in three of the soil gas samples, but at levels below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion. Carbon tetrachloride (maximum of 0.88 µg/m³), tetrachloroethylene (maximum of 2.17 µg/m³) and 1,1,1-trichloroethane (maximum of 53.4 µg/m³) were detected in all four soil gas samples, all of which were reported at levels below the monitoring level ranges established within the NYSDOH Final Guidance on Soil Vapor Intrusion.

5.4 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected for the Site.

5.5 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

APPENDIX E	EDR Radius Map Report

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of Triple A Group: 138-142 North 10th Street, Brooklyn, New York, 11211. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of three contiguous lots located on the south side of North 10th Street in the Williamsburg Section of the Borough of Brooklyn, City of New York, Kings County, New York. The Street address associated with the Site is 138-142 North 10th Street, Brooklyn, New York 11211 and is identified as Block 2304 and Lot(s) 12, 13 and 14 on the New York City (NYC) Tax Map. The lots are rectangular shaped and approximately 5,625 square feet (s.f.) with approximately 54 feet of street frontage on North 10th Street.

EBC was able to establish a history for the property dating back to 1887. In 1887 the Site was vacant. From 1905 to 1980, the Site was developed with three residential dwellings. Beginning 1982, the Site has been vacant land and utilized for truck parking (1983-1987), for rag storage (1988-2007) and as a storage lot (2007 onwards).

RECOGNIZED ENVIROMENTAL CONDITIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, *this assessment has revealed no recognized environmental conditions in connection with the Site.*

However, EBC has identified the following environmental concern:

The Site (138-142 North 10th Street) is listed with a Hazmat / Noise “E” restriction (E-138) with the descriptions of “underground gasoline storage tank testing protocol” and window wall attenuation and alternate ventilation”. This designation came into effect on May 11, 2005. An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. It should be noted that nearly any development scenario for the Site is subject to the E-designation Environmental Review Program administered by the NYCOER due to the hazardous materials “E” designation assigned to the Site. Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of the Eastern Capital Group: 138-142 North 10th Street, Brooklyn, NY, 11211 (**Figure 1**). The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – The depth to groundwater at the Site is approximately 10 to 20 feet below grade surface (bgs). Groundwater is expected to flow to the north-northeast, consistent with the regional trend.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between Eastern Capital Group and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of the Eastern Capital Group; no other party may use the report without the written authority of EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of three contiguous lots located on the south side of North 10th Street in the Williamsburg Section of the Borough of Brooklyn, City of New York, Kings County, New York. The Street address associated with the Site is 138-142 North 10th Street, Brooklyn, New York 11211 and is identified as Block 2304 and Lot(s) 12, 13 and 14 on the New York City (NYC) Tax Map. The lots are rectangular shaped and approximately 5,625 square feet (s.f.) with approximately 54 feet of street frontage on North 10th Street.

According to the most recent deeds, obtained from the New York City Registrar, and dated March 1998 and March 2007, the current owner of the Site was identified as Cheryl Weiss (138-142 North 10th Street). Copies of the deeds are attached in **Appendix B**.

2.2 Site Characteristics

Site is utilized as a storage for equipment and supplies associated with Apple Restoration and Waterproofing and is not developed with a building.

Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

As the Site is currently undeveloped, no utilities are directly provided to the property. Electric, telephone, natural gas, water and sanitary utilities were observed along the adjacent roadways (North 10th Street).

2.3 Physical Setting

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, New York (NY) Quadrangle (Figure 3), which indicates that the Site has a topographic elevation of approximately 27 feet above mean sea level (amsl). The Site is relatively flat with the general topographic gradient sloping downward to the north-northeast.

2.3.1 Surface Water

The East River is located approximately 0.4 miles to the west of the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix E).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006 (**Figure 5**), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 27 feet amsl, the depth to groundwater in the vicinity of the Site is approximately 10-20 feet below grade surface (bgs). Groundwater is expected to flow to the north-northeast consistent with the regional trend.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.750 pCi/L (first floor level) and 1.370 pCi/L (basements). Data indicate that approximately twelve percent of basements tested showed results in excess of the 4.0 pCi/L USEPA action level. Based on these data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The Site is utilized as a storage for equipment and supplies associated with Apple Restoration and Waterproofing and is not developed with a building.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that the Site is zoned R6A residential (**Figure 5**), and has been since at least May 2005.

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	Mixed use building (137-139 North 10 th Street)
South	Residential Building (137-139 North 9 th Street)
East	Residential Building (144 North 10 th Street)
West	Residential Building (136 North 10 th Street)

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1887, 1905, 1916, 1942, 1951, 1965, 1978, 1979, 1980, 1981, 1982, 1983, 1986, 1987, 1988, 1989, 1991, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years 1928 through 1912. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1887

Subject Site:

The Site is identified as 138-142 North 10th Street and developed with three (3) vacant lots.

Adjacent properties:

The properties adjacent to the east, west and to the north (beyond North 10th Street) are depicted as vacant lots. The south adjacent property is depicted with a residential dwelling and stores.

1905

Subject Site:

The Site is developed with three (3) three-story residential buildings.

Adjacent properties:

The properties adjacent to the east and west are depicted with residential dwellings. The south adjacent property is depicted with the present day two buildings occupied by residential dwellings. The north adjacent property (beyond North 10th Street) is depicted with the present day five-story building occupied by a silk mill.

1916

Subject Site:

The Site remains consistent with the 1905 Sanborn map.

Adjacent properties:

The property adjacent to the south is depicted with the present day buildings one of which is occupied by a residential dwelling and the other by a store. The north adjacent property (beyond North 10th Street) is depicted with a vacant lot and the present day five-story building occupied by a metal goods store. The remaining adjacent properties remain consistent with the 1905 Sanborn map.

1942

Subject Site:

The Site remains consistent with the 1905 Sanborn map.

Adjacent properties:

The south adjacent property is depicted with the present day two buildings occupied by dwellings. The remaining adjacent properties remain consistent with the 1916 Sanborn map.

1951

Subject Site:

The Site remains consistent with the 1905 Sanborn map.

Adjacent properties:

The property adjacent to the west is depicted with a two-story commercial building with an office and a storage area for waste paper and rags. The east adjacent property is depicted with a single-story warehouse and the south adjacent property is depicted with the present day two (2) apartment buildings. The north adjacent property is depicted with a vacant lots and the present day building utilized as a factory.

1965, 1978, 1979, 1980

Subject Site:

The Site remains consistent with the 1905 Sanborn map.

Adjacent properties:

The adjacent properties remain consistent with the 1951 Sanborn map

1981

The Site and the adjacent properties are not clearly depicted in the 1981 Sanborn map.

1982

Subject Site:

The Site is depicted as three (3) vacant lots.

Adjacent properties:

The adjacent properties remain consistent with the 1951 Sanborn map

1983, 1986, 1987

Subject Site:

The Site is depicted as a parking area for trucks.

Adjacent properties:

The adjacent properties remain consistent with the 1951 Sanborn map

1988, 1989, 1991, 199, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 & 2007

Subject Site:

The Site is depicted as a vacant lot used for rag storage.

Adjacent properties:

The adjacent properties remain consistent with the 1951 Sanborn map The north adjacent property, beyond north 10th Street is depicted with the present day apartment building and a bus parking area. (2001-2007)

The Sanborn maps did not note the presence of gasoline storage tanks.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1928	Subject Property: Address not listed in resource source Adjacent Properties: Metal stamping company (136)
1934	Subject Property: Residents (138, 140, 142) Adjacent Properties: Rice Bernard Sons Inc Plated Ware (139), Residents (144)

1940	Subject Property: Address not listed in research source Adjacent Properties: Paper mill suppliers (136), Rice Bernard Sons Inc Plated Ware (139)
1945	Subject Property: Address not listed in research source Adjacent Properties: Rice Bernard Sons Inc Plated Ware (139)
1949	Subject Property: Names associated with residential occupancy (140, 142) Adjacent Properties: Paper mill suppliers (136), Rice Bernard Sons Inc Plated Ware (139), Canal Brass and Supplies Company (144)
1960	Subject Property: Names associated with residential occupancy (140, 142) Adjacent Properties: Paper mill suppliers (136), commercial (139), Canal Brass and Supplies Company (144)
1965	Subject Property: Names associated with residential occupancy (140, 142) Adjacent Properties: Commercial (139), Names associated with residential occupancy (136), Canal Brass and Supplies Company (144)
1970	Subject Property: Names associated with residential occupancy (138, 140, 142) Adjacent Properties: Commercial (139), Canal Brass and Supplies Company (144)
1973	Subject Property: Names associated with residential occupancy (140, 142) Adjacent Properties: C & A Paper Stock (136), Commercial (139), Steel warehouse Corporation (144)
1976	Subject Property: Names associated with residential occupancy (140, 142) Adjacent Properties: C & A Paper Stock (136), commercial (139), steel warehouse corporation (144)
1980	Subject Property: Address not listed in research source Adjacent Properties: Commercial (139)
1985	Subject Property: Address not listed in research source Adjacent Properties: Advance Paper Company (136), commercial (139), commercial (144)
1992	Subject Property: Address not listed in research source Adjacent Properties: Commercial (144)
1997	Subject Property: Address not listed in research source Adjacent Properties: Water Lilies Food (136)
2005	Subject Property: Address not listed in research source Adjacent Properties: Water Lilies Food (136), F & W Mechanical Company, residents (139)
2007	Subject Property: Address not listed in research source Adjacent Properties: F & W Mechanical Company, residents, Mothers Across America (139)
2012	Subject Property: Address not listed in research source Adjacent Properties: Water Lilies Food (136), F & W Mechanical Company (139)

Note: Address numbers in () are located on North 10th Street, unless noted otherwise.

Information regarding additional surrounding properties identified on the City Directory search is included with the search in **Appendix D**. The city directory indicated that the Site has been occupied by various residential tenants from 1934 to 1976.

3.3 Site History Summary

EBC was able to establish a history for the property dating back to 1887. In 1887 the Site was vacant. From 1905 to 1980, the Site was developed with three residential dwellings. Beginning 1982, the Site has been vacant land and utilized for truck parking (1983-1987), for rag storage (1988-2007) and as a storage lot (2007 onwards).

4.0 USER PROVIDED INFORMATION

4.1 Title Records

As of the date of this report the user has not requested that EBC perform a title search.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made EBC aware of any environmental liens against the Site and has not requested that EBC perform an environmental lien search for the Site.

4.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the Site or surrounding property.

4.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Site, specific chemicals in use at the Site or any spills, chemical releases or environmental cleanups at the Site.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owner of the site is identified as Cheryl Weiss (138-142 North 10th Street).

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property by Eastern Capital Group.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. No NPL sites were identified within a 1-mile radius of the Site.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA’s priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. One (1) CERCLIS site is listed within a half-mile radius of the Site and is further discussed below:

- FYN Paint and Lacquer Company Inc at 230 Kent Avenue is located 2577 feet to the west-southwest (hydrologically up-gradient) of the Site. According to the database, this is a removal only site and no site assessment work is required. A non-NPL status was conferred on this site on October 25, 2011 and a removal assessment was conducted at this property on November 29, 2011. Based on the relative distance and current status (removal site only), this property is not considered to be a significant environmental concern.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA’s knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. One (1) CERCLIS-NFRAP site was identified within a one mile radius of the Site. This site is located within 1/4 mile of the Site and is further discussed below:

- Willamsburg Square LLC at 154 North 7th Street is located 807 feet to the south-southwest (hydraulically up-gradient) of the Site. According to the database, this is a removal only site and no site assessment work is required. Removal of hazardous material commenced at this site on August 26, 1998 and concluded on November 4, 1998. The property was declared as an archive site on April 11, 2005. Based on the relative distance and current status (removal site only), this property is not considered to be a significant environmental concern.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA's list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility. One (1) RCRA CORRACTS site was identified within a one mile radius of the Site. This site is located greater than ½ mile radius of the Site and based on the relative distance; it is not expected to represent a significant environmental concern.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSDF and no TSDFs were identified within a ½ mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A

NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as a RCRA-LQG, RCRA-SQG, RCRA-NonGen facility or RCRA-CESQG. Four (4) RCRA-LQG, six (6) RCRA-SQG, four (4) RCRA-CESQG and twenty-three (23) RCRA NonGen facilities were identified within a 1/4 mile radius of the Site. None of these sites are located adjacent to the Site. According to the EDR database, no violations are listed or corrective action has been taken for any of these sites. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a 1/2 mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: Neither the Site nor any property within one mile of the Site is identified in the CONSENT databases.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at

an NPL site containing technical and health information to aid in the cleanup.

Findings: Neither the Site nor any property within one mile of the Site is identified a ROD site.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: Neither the Site nor any property within ¼ mile of the Site is listed in the MINES database.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive

Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS site. Three (3) SHWS facilities were identified within a one mile radius of the Site. These sites are further discussed below:

- K-Williamsburg Works at Kent Avenue & 12th Street is located 1261 feet to the north-northwest (hydraulically down to cross-gradient) of the Site. This facility operated as a manufactured gas plant from 1887 to 1916 and is currently a warehouse and inactive petroleum terminal. MGPs have known byproducts of DNAPL and purifier waste. These materials are made up of BTEX, PAHs and cyanide. The DNAPL causes contamination of both soil and groundwater and BTEX causes soil vapor issues. The environmental assessment for this site has not yet been completed and the NYSDOH is working on determining health impacts to public based on results of the site assessment (once completed). There are ongoing plans by the City of NY to convert this area into a waterfront park. Based on the involvement of the State for remediation of this site, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- BQE/Ansbacher Color and Dye Factory at Meeker Avenue is located 2230 feet to the south-southeast (hydraulically cross-gradient) of the Site. According to the database, this site does not present a significant threat to the public health or environment. The primary contaminants of concern are arsenic, lead, mercury and cyanide. Investigations indicated that the subsurface soils in this area contain elevated levels of arsenic, lead and mercury and the groundwater in this area is also contaminated with these metals. The site does not constitute a significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete and the contaminated groundwater has not migrated significantly below the footprint of the former factory. Based on this information, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

- Former Spic and Span Cleaners and Dyers Inc at 315 Kingsland Avenue is located 4887 feet to the east-northeast (hydraulically down-gradient) of the Site. According to the database, this site represents a significant threat to the public health or environment and action is required. The primary contaminant of concern at this is tetrachloroethylene (PCE). PCE has been found in shallow groundwater at concentrations upto 39,000 ppb and in deep groundwater upto 76,000 ppb. The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater. Soil vapor intrusion sampling is ongoing at this site due to possibility of vapors from site related chemicals to migrate into nearby homes. Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses (including the Site) are supplied with public water and contaminants are below the ground surface. Based on this information, the relative distance and assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

State Hazardous Waste Disposal Sites – This is a database listing of sites delisted from the registry of inactive hazardous waste disposal sites.

Findings: The Site is not listed as a SHWS site. Two (2) SHWS facilities were identified within a one mile radius of the Site. Both of these sites are located in excess of ¼-mile from the Site, based on the relative distance these sites are not expected to represent a significant environmental concern.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: The Site is not listed as on the HSWDS database. One (1) HSWDS site was identified within a half- radius of the Site. This site is located in excess of ¼-mile and is hydraulically cross gradient from the site. Based on this information, this site is not expected to represent a significant environmental concern.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as a landfill. Eight (8) NYS Landfill sites were identified within a half mile radius of the Site. One of these sites, located within a 1/8- mile radius of the Site is an adjacent property and is further discussed below. The remaining seven (7) landfills are inactive sites. Additionally there is no reported evidence in the database search which suggests that these sites are a significant environmental concern to the Site. Based on this information and the relative distance from the subject property, these sites are not expected to represent a significant environmental concern.

- National Paper Stock Inc at 136 North 10th Street is located adjacent to the west (hydraulically up to cross-gradient) of the Site. This facility is an inactive landfill site with a description of “transfer station-permit”. No violations or releases of hazardous materials were identified from this site during the course of this investigation. Based on this information and the current inactive status of this landfill, this facility is not expected to represent a significant environmental concern.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site is not listed as a SWRCY site. One (1) SWRCY site was identified within a ½ mile radius of the Site. This site is located greater than ¼-mile radius of the Site and based on the relative distance; it is not expected to represent a significant environmental concern.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site is not identified as a LTANKS site. However, thirty-seven (37) LTANK sites were identified within ½ mile of the Site. One (1) of these sites is located adjacent to the Site. With the exception of three (3) sites, all of the LTANK sites have received closure from the NYSDEC. Based on this information, these LTANK sites are not expected to present a significant environmental concern to the Site. The adjacent property and open LTANKS listings are further discussed below:

- An unidentified property at 139 North 10th Street is located adjacent to the north (hydraulically down-gradient) of the Site. A release of #2 fuel oil was reported from this site (source unknown) on September 23, 2003. This release received closure from the NYSDEC on November 13, 2006. Based on the current status and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- 187 Bedford Avenue-TTF at 187 Bedford Avenue is located 887 feet to the south-southwest (hydraulically cross-gradient) of the Site. A release of #2 fuel oil was reported from this site on October 16, 2003. Alex Werocki was identified as the responsible party and a spill number of 0307525 has been assigned to this incident. It is unlikely that the Site owner will be held liable for any contamination originating at this facility. Based on this information, the identification of a responsible party and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- Engine Company 229 FDNY-DDC at 76 Richardson Street is located 2222 feet to the east-southeast (hydraulically down-gradient) of the Site. A release of gasoline was reported from this site on June 20, 1997. Engine Company 229 was identified as the responsible party and a spill number of 9703488 has been assigned to this incident. Free product of Kerosene has

been identified at a few monitoring wells located onsite but the source of kerosene is unknown. Groundwater monitoring and remediation work is currently ongoing at this facility. Based on ongoing remediation work, relative distance, the identification of a responsible party and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

- John Huley at 498 Leonard Street is located 2335 feet to the east-northeast (hydraulically cross-gradient) of the Site. A release of #2 fuel oil from a 5000-gallon onsite UST was reported on March 10, 2003 and a spill number of 0212132 was assigned to this incident. Based on the relative distance and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as a UST or a Hist UST site. The Site is not listed as a AST or Hist AST site. Twenty-seven (27) UST sites, fourteen (14) HIST UST sites, and nineteen (19) AST sites are registered within a ¼ mile radius of the Site. With the exception of one site, none of the UST, Hist UST or AST sites are located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section. The adjacent site is further discussed in detail below:

- An unidentified property at 139 North 10th Street is located adjacent to the north (hydraulically down-gradient) of the Site. According to the database, this site is currently equipped with one (1) 3000-gallon steel/iron UST which contains #2 fuel oil. A release of #2 fuel was reported from this site (source unknown) but this release received closure as discussed in detail in the LTANKS section. Based on this information and the assumed

direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

- An unidentified property at 139 North 10th Street is located adjacent to the north (hydraulically down-gradient) of the Site. According to the database, this site was historically equipped with one (1) 3000-gallon steel/iron AST which contained #2 fuel oil. The AST was installed on September 29, 1950 and closed on February 1, 2012. A release of #2 fuel oil was reported from this site (source unknown) but this release received closure as discussed in detail in the LTANKS section. Based on this information, aboveground nature of the tanks and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. Three (3) CBS facilities, one (1) CBS-UST and two (2) CBS-AST sites were identified within a ¼ mile radius of the Site. None of the sites are located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the Site nor any site within a ½ mile of the Site was identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. One (1) VCP site was identified within a one-half mile radius of the subject property. This site was also identified as a CERCLIS site and is further discussed below:

- FYN Paint and Lacquer Company Inc at 230 Kent Avenue is located 2577 feet to the west-southwest (hydrologically up-gradient) of the Site. According to information available in the database, the soil, vapor and groundwater at this site are contaminated with VOCS (as determined by on-site investigations). It is unlikely that people will drink contaminated groundwater as the area (including the Site) is supplied with public water and it is also unlikely that the area residents will come into contact with contaminated soil and subsurface material. Based on this information and the relative distance, this site is not expected to represent a significant environmental concern.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site was not identified as a Brownfield site. One (1) Brownfield site is located within ½ mile of the Site and is further discussed below:

- An unidentified property at 149 Kent Avenue is located 1540 feet to the west-southwest (hydrologically up-gradient) of the Site. According to information available in the database, the primary contaminants of concern for the site are PCE, TCE, PCBs, Lead and PAHs which have contaminated soil and groundwater (as determined by on-site investigations). This site is currently under review. It is unlikely that the owner of the Site will be held liable for any contamination originating at this property. Based on this information and the relative distance, this site is not expected to represent a significant environmental concern.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: The Site was not identified as an MOSF. Three (3) MOSF site, one (1) MOSF UST site and one (1) MOSF AST sites were identified within ½ mile of the Site. None of the sites are located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Sites with leaking tanks or spills are addressed in the appropriate section

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed within either the NY SPILLS or NY Hist SPILLS databases. However, Twenty-four (24) spill sites were identified within $\frac{1}{8}$ mile of the Site. None of these sites is located adjacent to the Site. With the exception of three sites, all of the NYS SPILLS sites have received closure from the NYSDEC. Based on the status, these sites do not represent a significant environmental concern to the Site. The open listings are further discussed in detail below:

- An unidentified property at 169-175 North 10th Street is located 471 feet to the southeast (hydraulically down to cross-gradient) of the Site. A release of # 2 fuel oil which impacted soil was reported from this site on January 16, 2007. Sharrissa was identified as the responsible party. It is unlikely that the Site owner will be held liable for any contamination originating at this facility. Based on this information, the identification of a responsible party and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- A parking lot at 34 Berry Street is located 535 feet to the north (hydraulically cross-gradient) of the Site. A release of petroleum which impacted soil and groundwater was reported from this site on February 26, 2008. Andrew Gasparro was identified as the responsible party. Groundwater sampling and remediation is currently ongoing at this site. Based on this information, the identification of a responsible party and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.
- An unidentified property parking lot at 95 Bedford Avenue is located 576 feet to the east-northeast (hydraulically cross-gradient) of the Site. A release of 100-gallons of petroleum which impacted soil was reported from this site on October 28, 2008. Kevin Brussee was identified as the responsible party. The site is being excavated under an “E designation” with the city because of lead contamination. Based on the identification of a responsible

party and the assumed direction of groundwater flow, this facility is not expected to represent a significant environmental concern.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a MANIFEST site. However, fifty-one (51) manifest sites were identified within a ¼ mile radius of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as drycleaner. No Drycleaner sites were identified within ¼ mile of the site.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not identified as an MGP site. Two (2) MGP sites were identified within a one-mile of the Site. These sites are located in excess of 1/8-mile from the Site and are not adjacent properties. These sites are also located cross to down-gradient of the Site. Based

on the distance from the Site and assumed direction of groundwater flow these sites are not expected to represent a significant environmental concern.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site is identified as an E Designation site. Twenty (20) E Designation sites were identified within 1/8-mile of the Site. With the exception of two sites, these sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs. The Site and adjacent properties are further discussed in detail below:

- The Site (Lot 12 Block 2304 at 138 North 10th Street & Lot 14 Block 2304 at 142 North 10th Street) was identified as an E Designation site and is assigned the E number of E-138, with the description of “underground storage tank testing protocol” and “window wall attenuation and alternate ventilation” This designation came into effect on May 11, 2005. Cherly Weiss was identified as the owner of the Site. No further information was available from the EDR database for review. This listing is further discussed in the previous sections.
- The west adjacent property at 136 North 10th Street (hydraulically cross to up-gradient) was identified as an E Designation site and is assigned the E number of E-138, with the descriptions of “underground storage tank testing protocol” and “window wall attenuation and alternate ventilation” This designation came into effect on May 11, 2005. C & L Trading USA Inc was identified as the owner of the Site. No other releases or violations in

connection with this site were identified during the course of this investigation. Based on this information, this listing is not considered a REC.

- The east adjacent property at 144 North 10th Street (hydraulically cross to up-gradient) was identified as an E Designation site and is assigned the E number of E-138 with the descriptions of “underground storage tank testing protocol” This designation came into effect on May 11, 2005. “148 North 10th Street” was identified as the owner of the Site. No other releases or violations in connection with this site were identified during the course of this investigation. Based on this information, this listing is not considered a REC.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site was not identified as a EDR Historical Auto Station site. Eleven (11) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc.

Findings: The Site was not identified as a EDR Historical Cleaners site. Four (4) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information

provided within the EDR report indicates that there are no listed violations or that corrective action has been taken to address the violations listed for these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot:	Block 2304 – Lot Nos. 12, 13, 14
Address:	138-142 North 10 th Street
Owner:	Cheryl Weiss.
Lot Size:	5,625 square feet – rectangular
Building Class:	Z9- miscellaneous
Zoning:	Residential (R-6A)

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Pertinent information regarding Site is summarized below:

According to the records reviewed, the Site is an “E-Designation” site for Hazmat/Noise. No violations, Certificates of Occupancy (COs) or jobs were on file for the north area, with the exception of a minor complaint (in connection with construction without a permit) which has been resolved.

5.2.4 Previous Environmental Reports

A previous environmental investigations/report for the Site was provided to EBC for review at the time of preparation of this document. The report was a Phase I environmental site assessment issued by Soil Mechanics Environmental Services in February 1996. According to the report, the Site was occupied by a former refuse facility and site investigation revealed evidence of a partial basement, two (2) non functional electric refuse lifts, one abandoned refuse truck, one abandoned forklift and large amounts of miscellaneous debris. In addition numerous partially empty 5-gallon containers of roof coating and two areas of oil spillage were observed within the concrete flooring in the area surrounding the refuse truck. The report concluded that there were no recognized environmental concerns in connection with the Site. However, the report recommended that proper removal and disposal of the refuse truck, fork lift, 5-gallon containers and onsite refuse would be prudent. In addition, it recommended that the oil like spillage should be cleaned. It should be noted that during the onsite investigation conducted by EBC none of these items were identified.

5.2.5 Historic Zoning Map

A review of the NYC Department of City Planning Zoning Maps for the years 1961 through 2012 indicates that the Site has been zoned manufacturing M1-2 from December 1961 to January 1971; under special purpose district residential R6 (M1-2) from November 1973 to August 2004; residential R6A with E Designation e2 (E-138) from May 2005 to November 2009 and residential R6A from 2010 to 2012. A copy of the December 1961 zoning map is included as **Figure 5B**.

5.2.6 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDP) and is commonly depicted on zoning maps with an “E” designation, as well

as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites. The Site (138-142 North 10th Street) was identified as an “E” designated site and is discussed in previous sections.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Ms. Chawinie Miller of EBC performed the site inspection on Friday, August 23, 2013; beginning at approximately 12:30 pm. The reconnaissance included a visual inspection of the Site the sidewalk immediately in front of the Site, and the exterior of adjacent properties.

Photographs taken during the inspection are attached (**Appendix A**).

6.2 Observations

The Site is utilized as a storage for equipment and supplies associated with Apple Restoration and Waterproofing and is not developed with a building.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

EBC did not note any AST or USTs during the site inspection.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

Five (5) 5-gallon gasoline containers were noted on the Site. No spills or staining were observed and this area is paved with concrete. Based on the good housekeeping practices in place, the presence of these containers on the Site does not represent a significant environmental concern. EBC did not note any other hazardous or non hazardous chemical storage and or disposal during site inspection.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools,

Class V wells are “authorized by rule” (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

As there are no on-site buildings, no sanitary wastewater is currently discharged from the property. The area surrounding the property is serviced by the NYC municipal sewer system.

No features subject to UIC regulations were observed on the subject property during the site inspection.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

No electrical transformers or other equipment suspected to contain PCBs were identified on or adjacent to the property at the time of the site inspection.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). As the Site is currently vacant land, EBC did not note any suspect asbestos containing materials.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. As there are currently no buildings located on the Site, there was no evidence of usage of Lead Based Paints at the Site.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn Quadrangle, indicates that no NYS freshwater wetlands are located within a one mile radius of the Site. ECB also reviewed NYSDEC

Tidal Wetlands Maps available online at <http://twi.ligis.org>. The tidal wetlands map indicates that there are no NYS tidal wetlands located within a half-mile radius of the Site.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicate that no potential federal wetlands are located within a half mile radius of the Site. Additional information obtained from the FWS website is included in **Appendix B**.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the Site is located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970202F) indicates that the entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Owner

EBC interview the owner of the Site and was informed that the Site is utilized as a storage lot.

7.2 Occupants

EBC did not interview any occupants.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYCDOH and FDNY York City Department of Health (NYCDOH) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, **No recognized environmental conditions were identified** in connection with the Site.

However, the following environmental issue was identified:

8.1 Additional Environmental Issues

The Site is identified as having a Hazmat “E” restriction. The Site has been assigned an E-designation (E-138). The Hazardous Materials designation indicates that there is a potential for soil and groundwater beneath the Site to be impacted by historic operations at the Site or adjacent properties.

An E-designation does not interfere with the present use of the Site; however E-designations do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. Such release may require a full subsurface investigation, remedial and health and safety planning, implementation of a remedial program and documentation that the remedial program was completed during redevelopment of the property. Additional information regarding “E” sites can be found on the New York City Office of Environmental Remediation website:

http://www.nyc.gov/html/oer/html/e_designation/e_designation.shtml.

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-05 for the commercial property identified by the street addresses of 138-142 North 10th Street, Block 2304 Lot Nos. 12, 13 and 14 in Brooklyn, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed no recognized environmental conditions in connection with the Site.

However, EBC has identified the following environmental concern:

The Site is listed with a Hazmat / Noise “E” restriction (E-138) with the descriptions of “underground gasoline storage tank testing protocol” and window wall attenuation and alternate ventilation”. This designation came into effect on May 11, 2005. An E-designation does not interfere with the present use of the Site; however E-designation do prevent the release of building permits subject to a detailed environmental review and release by the NYC Office of Environmental Remediation. It should be noted that nearly any development scenario for the Site is subject to the E-designation Environmental Review Program administered by the NYCOER due to the hazardous materials “E” designation assigned to the Site. Typical NYCOER Phase II investigation/sampling requirements for hazmat “E” sites are as follows:

- Collection and laboratory analysis of for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), target analyte list (TAL) metals, PCBs and pesticides.
- Collection and laboratory analysis of groundwater samples for VOCs, SVOCs, TAL metals (filtered and unfiltered), PCBs and pesticides.
- Collection and laboratory analysis of soil gas samples for laboratory analysis of VOCs via EPA Method TO-15.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-05, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

PROFILE

Mr. Sosik has 24 years of experience in environmental consulting. He specializes in advising clients on managing environmental compliance with federal, state, and municipal agencies and has successfully directed numerous investigation and remediation projects involving petroleum, pesticides, chlorinated solvents, heavy metals and radiologically activated media. His work included extensive three-dimensional investigations on MTBE, which have been used effectively to help shape public policy. He also has experience in applying models to groundwater related problems and has completed several large-scale projects to determine fate and transport of contaminants, establish spill scenarios, and closure criteria. His experience and expertise in the area of contaminant hydrogeology has resulted in requests from environmental attorneys, property owners and New York State to serve as an expert witness and technical advisor on a variety of legal disputes.

For the past 10 years Mr. Sosik has been primarily engaged in providing environmental consulting to developers responding to the extensive rezoning of former industrial and commercial properties, which is currently taking place throughout New York City. These services include everything from pre-purchase evaluations and contract negotiations to gaining acceptance in and moving projects through the NYS Brownfields Program. Mr. Sosik has taken a pro-active role in the continued development of the NYS Brownfields Program and related policy, by attending numerous working seminars, active participation in work groups and task forces and by providing commentary to draft versions of new guidance documents. Throughout his professional career, Mr. Sosik has remained committed to developing innovative cost- efficient solutions to environmental issues, specifically tailored to the needs of his clients.

SELECTED PROJECTS

Scavenger Waste Treatment Facility (SWTF), Suffolk County, NY

Water Treatment Plant EIS - Focused EIS - In response to requests from the Suffolk County Council on Environmental Quality and the Brookhaven Conservation Advisory Council, Mr. Sosik prepared a focused EIS to evaluate the potential impacts to an important surface water resource from the proposed facility including cumulative and synergistic effects with established contaminant plumes in the area.

Advanced Residential Communities, Rockville Centre, NY

Brownfield Project – As the senior project manager on this large scale, high profile redevelopment project, Mr. Sosik was asked to develop a plan to accelerate the regulatory process in the face of general community opposition. Through numerous discussions with the BCP management team, He was able to condense the schedule and review period, through the submission of supporting documents (Investigation Report, Remedial Work Plan) with the BCP application package. Community opposition, which focused on the environmental condition of the site as a means to block the project, was used to advantage in expediting approval of the aggressive interim remedial

plan. This will allow the developer to begin remedial work approximately 5 months ahead of schedule.

Former Temco Uniform site, West Haverstraw, NY

Brownfield Project – Mr. Sosik took over management of this project from another consultant following transition of this VCP site to the BCP. Mr. Sosik used the opportunity to renegotiate and revise the scope of work to allow a more cost effective and focused investigation plan without re-writing or resubmitting the RIWP. During the NYSDEC's review of the transition package, he met with and coordinated changes with the NYSDEC Project Manager to gain approval. The result saved the client a significant amount of money, but perhaps more importantly in this case, did so without loss of time.

Grovick Properties, Jackson Heights, NY

Brownfield Project – This Brownfield property is somewhat unique in that it had been investigated and partially remediated by the NYSDEC through the petroleum spill fund. The client was interested in purchasing the property and redeveloping it as office and retail space. Mr. Sosik reviewed the NYSDEC investigation and developed a

Charles B. Sosik, PG, PHG, Principal

supplemental plan to meet the requirements of an RI under the BCP program. By performing this limited amount of field work “up-front” he was able to complete an RI Report and Remedial Plan and submit both with the BCP application package. The NYSDEC and NYSDOH approved the RI Report and the Remedial Plan with minor changes. This cut 120 days from the review process and allowed the client to arrange financing and move his project forward knowing what the clean-up costs would be at the outset.

Metro Management, Bronx, NY

Brownfield Project – The site of a former gas station, the developer had planned to construct a 12-story affordable housing apartment complex with first floor retail space. Since the site was located in an Environmental zone, potential tax credits of 22% for site development, remediation and tangible property could be realized under the BCP. In a pre-application meeting with the NYSDEC, Mr. Sosik realized that the department did not believe the site was eligible for the BCP, since it had been previously investigated and closed under the spills program.

Mr. Sosik assisted the developer in securing financing, and due to the demands of an aggressive construction schedule developed an Interim Remedial Measure (IRM), based on chemical oxidation treatment. Working closely with the clients environmental counsel, Mr. Sosik was able to get the IRM approved without a public comment period. Implementation of the IRM is currently underway.

The project was awarded the 2009 NYC Brownfield Award for Innovation.

Brandt Airflex, NY

Technical Consulting Services - Mr. Sosik provided senior level technical advice and strategic planning in developing an off-site RI/FS for the site, in negotiating a tax reduction for the property due to the environmental condition and in preparing a cost to cure estimate for settlement between business partners. After achieving a favorable tax consideration and settlement agreement for his client

Allied Aviation Services, Dallas, Fort Worth, Airport, Dallas, TX

Jet Fuel Investigation - Mr. Sosik developed and managed an investigative plan to quickly identify the extent and source of jet fuel which was discharging from the Airport’s storm drain system to a creek a mile away. Through the use of a refined conceptual model, accelerated investigative techniques and a flexible work plan, he was able to identify the source of the fuel and the migration route within a single week. He then identified remedial options and successfully negotiated a risk based plan with the Texas regulatory agency that had issued a notice of enforcement action against the facility.

KeySpan – Former LILCO Facilities, Various NY Locations

Pesticide Impact Evaluation - Mr. Sosik developed, negotiated and implemented a site screening procedure to evaluate impact to public health and the environment as the result of past herbicide use at 211 utility sites. Using an unsaturated zone leaching model (PRZM) on a small subset of the sites, he was able to establish mass loading schedules for the remaining sites. This was combined with public well data in a GIS environment to perform queries with respect to mass

loading, time transport and proximity to vulnerable public supply wells. Using this approach Mr. Sosik was able to show that there were no concerns for future impact. This effort satisfied the public health and resource concerns of the state environmental agency and county health department in a reasonable amount of time and at a fraction of the cost of a full scale investigation.

Former Computer Circuits (Superfund) Site, Hauppauge, NY

CERCLA RI/FS - As Senior Project Manager for the site, he played a major role in regaining control of the investigation activities for the PRP. This action prevented the USEPA from initiating an extensive investigation at the site using a RAC II contractor allowing the client to perform a more efficient investigation. He was involved in all negotiations with EPA and was the project lead in developing a revised site characterization plan (work plan, field sampling plan, quality assurance plan, etc.). By carefully managing all phases of the investigation and continued interaction with each of the three regulatory agencies involved, Mr. Sosik was able to keep the project focused and incrementally reinforce the clients position. The estimated cost of the revised investigation is expected to save the client 1.5 to 2 million dollars.

Sun Oil, Seaford, NY

Remediation Consulting Services & Project Management - Under an atmosphere of regulatory distrust, political pressure and mounting public hostility toward the client, Mr. Sosik conducted an off-site 3-D investigation to define the extent of contamination and the potential impact on public health. By designing and implementing an aggressive source area remediation program and personal interaction with the public and regulatory agencies, he was able to successfully negotiate a limited off-site remediation favorable to the client. Source area remediation was completed within 6 months and the project successfully closed without damage to the client’s public image or working relationship with the regulatory agencies.

Con Edison, Various Locations, NY

Hydrogeologic Consulting Services - Under a general consulting contract, Mr. Sosik conducted detailed subsurface hydrogeologic investigations at five locations to assist in the development of groundwater contingency planning. He also developed and implemented work plans to investigate and remediate existing petroleum, cable fluid, and PCB releases at many of the generating facilities and substations. An important aspect of his role was in assisting the client in strategic planning and negotiations with the regulatory agency.

Keyspan - Tuthill Substation, Aqueboque, NY

Accelerated Site Characterization - Using accelerated site characterization techniques, Mr. Sosik presented the project as a case study in establishing the transport of an herbicide and its metabolites applied at utility sites in the 1980’s. The results were then used to establish a screening method for evaluating 211 similar sites controlled by the client in a reasonable and efficient manner.

NYSDEC Spill, East Moriches, NY

Spill Release Analysis - With recognized expertise in the area of gasoline plume development on Long Island, Mr. Sosik was asked by

Charles B. Sosik, PG, PHG, Principal

the State to establish the release date (and principal responsible party) of an extensive petroleum spill, which impacted a residential neighborhood. He used multiple lines of evidence, and a new EPA model (HSSM), which he has helped to refine, to reconstruct the release scenario and spill date, in support of the State Attorney General's cost recovery effort from the PRP.

Minmilt Realty, Farmingdale, NY

Fate & Transport Modeling - He completed an RI/FS at this location for a PCE plume that had been in transit for over 30 years. Mr. Sosik applied a conservative model to evaluate time/concentration impacts under a variety of transport scenarios to a municipal wellfield located 13,000 feet away. Through the use of the model and careful interpretation of an extensive data set compiled from several sources, Mr. Sosik was able to propose a plan which was both acceptable to the regulator and favorable to the client.

Sebonack Golf Course Project, Town of Southampton, NY

IPM Pesticide Study - Provided professional hydrogeologic services in support of the EIS prepared for the development of the site. The proposed development included an 18-hole golf course, clubhouse, dormitory facility, cottages, associated structures, and a 6,000 square foot research station for Southampton College. Mr. Sosik performed an extensive evaluation (using a pesticide-leaching model) on the effects of pesticide and nitrogen loading to groundwater as part of the projects commitment to an Integrated Pest Management (IPM) approach.

NYSDEC, Spills Division, Regions 1 - 4

Petroleum Spills Investigation & Remediation - As a prime contractor/consultant for the NYSDEC in Regions 1-4, Mr. Sosik has managed the investigation and remediation of numerous petroleum spills throughout the State. Many of these projects required the development of innovative investigation and remediation techniques to achieve project goals. He was also involved in many pilot projects and research studies to evaluate innovative investigation techniques such as accelerated site characterization, and alternative approaches to remediation such as monitored natural attenuation and risk based corrective action.

Sun Oil, E. Meadow, NY

Exposure Assessment - Performed to seek closure of the spill file, despite the presence of contaminants above standards, Mr. Sosik determined after the extended assessment that the level of remaining contamination would not pose a future threat to human health or the environment. He used multiple lines of evidence, and a fate and

transport model to show that degradation processes would achieve standards within a reasonable time.

Sand & Gravel Mine, NY

Property Development - As part of the development of a sand and gravel mine, Mr. Sosik provided environmental consulting services to assist in obtaining a mining permit, which would result in the construction of a 150-acre lake. Specifically, Mr. Sosik investigated if the proposed lake would reduce groundwater quantity to domestic and public well fields, and/or accelerate the migration of potential surface contaminants to the lower part of the aquifer. After assuming the lead role in negotiations with the regulatory agency, Mr. Sosik was able to obtain a permit for the client by adequately addressing water quality and quantity issues, and by preparing a monitoring plan and spill response plan, acceptable to all parties.

NYSDEC, Mamaroneck, NY

Site Characterization / Source Identification - In a complex hydrogeologic setting consisting of contaminant transport through fractured metamorphic bedrock and variable overburden materials, Mr. Sosik was able to develop and implement a sub-surface investigation to differentiate and separate the impact associated with each of two sources. The results of this investigation were successful in encouraging the spiller to accept responsibility for the release.

Riverhead Municipal Water District, NY

Site Characterization / Remedial Planning - Using accelerated characterization techniques, he implemented a 3-D site investigation to identify two service stations 4,000 ft. away as the source of contamination impacting a municipal wellfield. In accordance with the strict time table imposed by the need to return the wellfield to production by early spring, he designed and implemented a multi-point (9 RW, 6 IW) recovery and injection well system using a 3-d numerical flow model, and completed the project on time. Using a contaminant transport model, Mr. Sosik developed clean-up goals which were achieved in 9 months of operation, well below the projected 3 to 5 year project duration.

Montauk Fire Department, NY

Site Assessment - Mr. Sosik performed a limited investigation and used a 2-D flow model to demonstrate that the property could not have been the source of contamination which had impacted an adjacent wellfield as per the results of a previous investigation. This small focused effort successfully reversed a \$500,000, and rising, claim against the department by the water district and the NYSDEC.

EXPERT WITNESS TESTIMONY AND DEPOSITIONS

Fact Witness -Testimony on relative age of petroleum spill based on nature and extent of residual and dissolved components at the Delta Service Station in Uniondale, NY Fall/1999
Expert Witness / Expert Report for defendant in cost recovery case by NYS Attorney General regarding a Class II Inactive Hazardous Waste (State Superfund) project by the NYSDEC (October 2004 – present, Report: March 2005, Deposition: April 2005)
Expert Witness / Fact Witness for plaintiff seeking compensation for partial expenses incurred during the investigation and remediation of a USEPA CERCLA site due to the release and migration of contaminants from an "upgradient" industrial property. (Deposition May 2005, case settled April 2007).
Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Holtzville, NY (Deposition April 2005 - case settled).
Expert Witness – Statement of opinion and expert testimony at trial for plaintiff seeking damages from a major oil corporation for contamination under a prior leasing agreement in Rego Park, NY. Case decided in favor of plaintiff. Trial July 2007, in favor of Plaintiff. Qualified as Expert Witness.
Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Lindenhurst, NY (Trial date December 2009, in favor of plaintiff. Qualified as Expert Witness.

Expert Witness / Fact Witness for defendant with respect to cost recovery and third party responsibility for a NYSDEC petroleum spill site. (Expert Statement of Fact – October 2005).
Expert Witness for plaintiff seeking damages related to a petroleum spill from the previous owner/operator of a gas station in College Point, NY. Case settled 2009.
Expert Witness for plaintiff (municipal water supply purveyor) seeking damages from major oil companies and manufacturer of MTBE at various locations in Suffolk County, NY. Expert reports July 2007, August 2007 and October 2007, Case settled August, 2008.
Expert Witness - Deposition for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Sag Harbor, NY. August 2002
Expert Witness - for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Riverhead, NY. Case settled July 2008.
Expert Witness for defendant responding to a claim from adjacent commercial property owner on the origin of chlorinated solvents on plaintiff's property located in Cedarhurst, NY. Expert opinion submitted to lead counsel on March 6, 2009, case settled April 2009.
Expert Report - for Attorney General on modeling performed to determine the spill release scenario at a NYSDEC petroleum spill site in East Moriches, NY. June 2000.

MODELING EXPERIENCE (PARTIAL LISTING)

CONSULT YOUR LAWYER BEFORE SIGNING THIS INSTRUMENT - THIS INSTRUMENT SHOULD BE USED BY LAWYERS ONLY.

THIS INDENTURE, made the ^{5TH} day of March, nineteen hundred and ninety-eight
 BETWEEN CATHERINE MANZIO, residing at 222-44 Garland Drive, Bayside, N.Y.; LOUIS MANZIO, residing at 222-44 Garland Drive, Bayside, N.Y.; ROCCO MANZIO, residing at 36-41 168th Street, Flushing N.Y.; ROSEMARIE SAVIGNANO, residing at 15 Rosewood Road, White Plains N.Y.; CATHY ANN BLANCO, residing at 150-47 29th Avenue, Flushing, N.Y.; and MARGARET POLIZZI, residing at 193-12 37th Avenue, Flushing N.Y., being all the heirs at law and next of kin of ANTHONY MANZIO, deceased, and LOUIS MANZIO, residing at 222-44 Garland Drive, Bayside, New York,

S Tax
 \$ 360-

REG. 4541 PC 2015
 APR 15 11 06 2015

party of the first part, and

CHERYL WEISS, residing at 85-19 67th Road, Forest Hills, New York,

party of the second part,

WITNESSETH, that the party of the first part, in consideration of TEN (\$10.00) -----

dollars,

lawful money of the United States,

paid

by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever,

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, bounded and described as follows:

LOT 12

BEGINNING at a point on the southerly side of North 10th Street distant 143 feet 9 inches easterly from the corner formed by the intersection of the southerly side of North 10th Street with the easterly side of Berry Street;

RUNNING THENCE southerly parallel with Berry Street and part of the distance through a party wall 100 feet;

THENCE easterly parallel with North 10th Street 18 feet 9 inches;

THENCE northerly parallel with Berry Street and part of the distance through a party wall 100 feet to the southerly side of North 10th Street;

THENCE westerly along the southerly side of North 10th Street 18 feet 9 inches to the point or place of BEGINNING.

LOT 13

BEGINNING at a point on the southerly side of North 10th Street distant 162 feet 6 inches easterly from the corner formed by the intersection of the southerly side of North 10th Street with the easterly side of Berry Street;

RUNNING THENCE southerly parallel with Berry Street and part of the distance through a party wall 100 feet;

THENCE easterly parallel with North 10th Street 18 feet 9 inches;

THENCE northerly parallel with Berry Street and part of the distance through a party wall 100 feet to the southerly side of North 10th Street;

REEL 4541 PG 2016

THENCE westerly along the southerly side of North 10th Street 18 feet 9 inches to the point or place of BEGINNING.

SAID premises being known as and by street number 140 North 10th Street, Brooklyn, New York.

LOT 14

BEGINNING at a point on the southerly side of North 10th Street distant 181 feet 3 inches easterly from the corner formed by the intersection of the southerly side of North 10th Street with the easterly side of Berry Street;

RUNNING THENCE southerly parallel with Berry Street and part of the distance through a party wall 100 feet;

THENCE easterly parallel with North 10th Street 18 feet 9 inches;

THENCE northerly parallel with Berry Street 100 feet to the southerly side of North 10th Street;

THENCE westerly along the southerly side of North 10th Street 18 feet 9 inches to the point or place of BEGINNING.

SAID PREMISES being known as and by street number 142 North 10th Street, Brooklyn, New York.

BEING the same premises described in deeds dated 1/11/84, recorded 1/23/84, in Reel 1467 Page 1094, Reel 1117 Page 1808 dated 4/30/79, recorded 11/14/79, and in Reel 1126 Page 1400 dated 12/11/79, recorded 12/14/79.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof.

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises.

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

RECEIVED 10/23/2017

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been incumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there is

EXECUTIVE SUMMARY

1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/18/2013 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/18/2013 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 05/21/2013 has revealed that there are 3 NY SHWS sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 05/21/2013 has revealed that there are 37 NY LTANKS sites within approximately 0.5 miles of the target property.

NY CBS UST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS UST site within approximately 0.25 miles of the target property.

NY MOSF UST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF UST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF UST site within approximately 0.5 miles of the target property.

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there are 2 NY CBS AST sites within approximately 0.25 miles of the target property.

NY MOSF AST: Major Oil Storage Facilities Database. Facilities are licensed pursuant to Article 12 of the Navigation Law, 6 NYCRR Part 610 and 17 NYCRR Part 30. These facilities may be onshore facilities or vessels, with petroleum storage capacities of 400,000 gallons or greater. Includes MOSF's licensed or closed since April 1, 1986, (responsibility was transferred from DOT on October 13, 1985) plus available data obtained from DOT facilities licensed since Article 12 became law on April 1, 1978.

A review of the NY MOSF AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY MOSF AST site within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 05/21/2013 has revealed that there are 24 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/18/2013 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there is 1 NY HSWDS site within approximately 0.5 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 05/01/2013 has revealed that there are 48 NY MANIFEST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

CON EDISON - EAST 11TH ST. WOR	EAST 11TH - EAST 13TH S	WNW 1/2 - 1 (0.955 mi.)	222	837

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 11 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 4 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEMO"9/23/03, ROSSAN; DDO: Tank test failure letter was prepared and sent to: Mr. Frank Dross F N W Mechanical 139 North 10th Street Brooklyn, NY 11211 Ed.10/3/05: CBNCalled Phil Fazin, the tank tester and was told he would get back to DEC with more info.9/22/06 ttf letter sent to owner:Sandra MaislenSan Ten Raz LLC120 Pleasant St., Apt. 2Brookline, MA 02446 bf 11/13/06 On 10/12/06, received letter from Sandra Maislen in response to ttf letter. Reviewed letter and the attachments. The fill line, stick line, and vent line failed. I called Petroleum Tanks to see if they remember detecting any contamination when lines were replaced. I was told Mark Salamack was the person in charge of the tank repairs. He was in a meeting at the time of the call and I left a message for him to call me. Mr. Salamack (718-624-4842) called me back and told me that there was no observed contamination and no elevated reading on the PID meter used at the time of the repairs. NFA. bf

Remarks: RECOMMEND TO UNCOVER-EVALUATE AND RE-TEST

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040

VAULT2476 (Continued)

S103035648

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ENGELHARDT" See also spill #95414404. Steve Zalloughi, Con Ed - both transformers leaking, also fuel oil in vault. Found drip marks on street indicating fuel oil from outside source. Dark stains on wall indicate this may have happened before. Zalloughi feels that could be accidental or intentional dumping. 2 side-by-side transformers in different vaults. Sump pum in vault TM-2476. Sump in TM-2017, which flows to TM-2476. In TM-2017 PCB count >70 ppm (historical). Plan to wait for Chem Lab results on PCBs. Sump pump has been disengaged. Must schedule outage. Transformers are not stock items - will be removed. Leaks are from corrosion on bottom. 2/21/96: Tony Lebrono, Con Ed Chem Lab - Sump pit - <1 ppm PCB; vault bottom <1 ppm; debris on floor of vault 3 ppm; water/oi 8 ppm; oil from vault <1 ppm. To be cleaned when transformer removed and replaced. 2/7/05: Con Ed conducted site visit in 8/04 - no evidence of residual contamination. Sloe out. (JHO)

Remarks: TRANSFORMER LEAKED 4 GALLONS INTO THE HOLE

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Contaminated Soil Letter sent to:Kiska GroupMr. Selin Zkyuz170 North 11th StBrooklyn, NY 11205/24/06 Sharif Rahman- Rec'd Phase II report prepared by Hydro Tech Environmental,Corp. The site is a NYCDEP 'E' designated site. Borings were installed to investigate the subsurface soil and ground water quality.High concentration of VOC's(SP: Benzene-84,200 ug/kg,Toluene-79,900 ug/kg, Ethylbenzene-51,700 ug/kg, Xylene, Naphthalene-5,180,000 ug/kg) and SVOC's are present in soil and ground water(Benzene- 402ug/L, Toluene- 112 ug/L, Ethylbenze- 26.6 ug/L, Naphthalene-727 ug/L). Visual and olfactory evidence of petroleum was also identified in soil probes.Presence of significant level voc's/svoc's warrants long term soil and ground water remediation.Consultant recommended for excavation of the contaminated soil and injection of ORC to treat impacted ground water.Case has been transferred to Remediation Section B.6/21/06 - Tang, reviewed site assessment report dated 5/3/06 by HydroTech. GW impact is minimal. Bulk of the contamination is in soil. Since this is an "E" designated site by NYCDEP and DEP has already approved a work plan to excavate the contaminated soil, DEC will not require GW remedy. Spoke to Kathy DeVoe of HydroTech, informed her to submit the end point sampling results after all the contaminated soil are excavated. Will track this as a P3 site. - KST9/11/06 - HydroTech, Kathy Devoe wrote: "We will be starting the field work at the above referenced Site on Monday,September 18, 2006. We are expecting the field work to last approximately 3 days. If there is any change in the scheduling I will let you know." - KST
Remarks: SOIL SAMPLE FAILURE. CLEAN UP IS NOT IN PROCESS.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

long term cleanup site.3/19/08 - Raphael Ketani. Allegedly, a construction crew hit oil and it was bubbling up from the ground. I called Tony Kloss of Impact Environmental Remediation (908) 534-8820 and asked him why he had oil coming out of the ground. I asked him whether the crew hit another fuel tank (see the associated spill case #0712424 with 10 tanks), or whether the crew hit a pipe.Mr. Kloss said that it was nothing like that. He said that he talked to his crew and the consultants on site about this. He added that a coffer dam was constructed on the site and a guzzler truck is collecting oil contaminated water from inside the dam, that's all. As the spill site is already being managed through the earlier case #0712424, and as a complete removal of all contaminated soils and all tanks is presently underway at the site, and as the contaminated water is being collected, I am referring this case to the earlier one and closing the spill case.

Remarks: CONSTRUCTION CREW STRUCK OIL AND BUBBLING UP FROM GROUND , NO FURTHER INFO

DEC Memo: DEC Piper to investigate surce of cont.2/5/08- DEC Piper recieved addendum to RAP where a basement will now be constructed rather than slab on grade.RAP was changed as they will not be excavating entire site. DECPiper reviewed analytical ans spoke with Jane O'Connell regarding metals. NYC OER will handle metals and DEC will handle petroleum cont in back of property.7/16/12- DECPiper met with OER and Dave Yudelson. Excavation in front of property will go as planned with endpoints being collected. Yudelson feels cont in rear is from offsite. 981 ppm of Napthalene is highest hit. DEC Piper spoke with DEC Austin regarding rear of property. He feels to determinine if it is from an onsite source, further delineation is required. 7/17/12- DEC piper emailed Yudelson and he will submit a work plan with at least 3-4 geoprobe points and collect soil and groundwater.
Remarks: SOIL TESTING FOUND CONTAMINATION

 DEC Memo: Nov 7, 2005A "Contaminated Soil Letter" was sent to: Selim Akyuz P.E. Kiska Construction Corp 181 North 11th St, Suite 302 Brooklyn, NY 11211 12/12/05-Vought-Reviewed Remedial Action Plan (HydroTech 631-462-5866) dated 11/8/05 and received on 11/18/05. Site labelled by DEP as E designated site (#05DEPTECH063K). "The RAP documents the proposed screening segregation and disposal of contaminated soil from the site during to future site development. NO VOCs on site and SVOCs "appear related to urban fill material". Soil will be segregated on PID basis. Endpoint samples will be collected, "as per DER-10 samples will be obtained for every 30 linear feet of sidewall and every 950 square feet of bottom". DEC requires: 1) submission of detailed soil description of endpoint samples 2) submission of endpoint analyticals to the Department 3) installation of vapor barrier. Vought sent letter approving of RAP pending inclusion of above requirements. 3/15/06-Vought-Spoke with Rachel (Hydrotech) and

excavation was performed and elevated levels PAH's. Report will be submitted to DEC.05/17/06-Vought-Spill transferred from DEC Vought to DEC Piper as per DEC Austin.5/19/06- DEC Piper reviewed vapro barrier specification and they are acceptable providing they follow the manufacturers specs.DEC Piper reviewed report. As per report, approx 43 tons of soil were removed,. Enpoints revealed no VOC's above RSCO's and low levels of SVOC related to urban fill. A vapor barrier was placed and the area was backfilled. Piper looked at historical sanborns, as per maps , there were AST in vicinity of property though no UST and underground piping. This area has isolated xontamination through historic use. This spill is closed,.

Remarks: SOIL SAMPLES CONTAINED PAH

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIBBE"09/28/2001 - Letter received from Scott Spector, the owner of the property. He states that the concrete floors were cleaned up by the former of the building. (Regency Metal Stampingf) This was done as part of the sales agreement. He personally observed the clean up. The floors were scraped, steam cleaned and were immaculate after the process was completed. He then took possession of the property. WILLIAM T. CHRISTENSENsee also 98-04127.

Remarks: callers business is moving into factory bldg and last tenants had spilled above material and it seeped into concrete. caller already spoke to dec mr austin, dec sandra martionkat to handle monday

Spiller Name: ANDREW GASPARRO
Spiller Company: PARKING LOT
Spiller Address: 34 BERRY STREET
Spiller City,St,Zip: BROOKLYN, NY
Spiller Company: 001
Contact Name: ANDREW GASPARRO
Contact Phone: (917) 743-4789
DEC Memo: 2/26/08 - Raphael Ketani. I spoke with Andrew Gasparro of Landmark Consultant, Inc. (917) 743-4789. He is the consultant for the owners of the property, 34 Berry Street, Brklyn. (block and lot 2289/14). He said the owners are 34 Berry St., LLC, c/o LCOR, Inc., 110 Plaza, Ste 3310, NY, 10119. Their phone number is (212) 760-0060. Mr. Gasparro said that the ownership has changed hands 3 times in 9 months due to owner funding problems. Atherton Newport was the last owner of record before 34 Berry Street. Their intent is to tear down the two buildings on site and build 140 units of rental housing. A RAP was put together for the DEP (Maurice) and Mr. Gasparro will apply for an E-designation. Groundwater is 14' to 16' below ground. Landmark will bring in a frac tank and try to recover the contaminated water (they had groundwater hits). They have a deadline of the end of June to complete the project. So he believes this is the fastest way to resolve the issue. After the buildings are installed, 20 borings will be performed. Asbestos abatement has been performed. Landmark will provide the full RAP to DEC for review. The DEP will not give the go ahead to do the work until the DEC approves the RAP. A vapor barrier will be installed and there will be a garage in the basement. The garage will be ventilated. I told Mr. Gasparro to send DEC everything that he is sending the DEP. I also told him that DEC needs the finalized plans showing the vapor barrier system and the garage ventilation system. He said he will do this. I told Mr. Gasparro that DEC will send a CSL to the owners. He said that will be fine. The CSL went out today. 3/3/08 - Raphael Ketani. Mr. Gasparro brought the 3 volume Remedial Action Plan (2 vols.) and Construction Health and Safety Plan dated 2/29/08 and produced by Landmark Consultants, Inc. I began my review of the set of volumes. 3/6/08 - Raphael Ketani. I made an unannounced site visit and took 4 pictures of the outside of the property. The site looks the same as in the pictures in the Remedial Action Plan. There was nothing particular to note. 3/7/08 - Raphael Ketani. I finished my review of the RAP. My comments are: 1) the 2000 gal. fuel tank UST at 119 N. 11 Street is still listed as active in PBS registration #2-2667872) are there any impacts from the MGP site next door? 3) they are going to remove all of the soil in the northern third of the property adjacent to N. 12 Street, but the soil analyticals don't suggest a heavy BTEX presence 4) the groundwater sample from EB-1-GW on 3/31/07 had 257 ppb 2-methylnaphthalene and 0.954 ppb of benzene, and the Groundwater Sample Location Results map for 10/30/07 had 219 ppb of benzene 5) the information for the vapor barrier system and the foundation plan seemed alright I spoke to Mr. Gasparro about the first four comments. His response was the following: 1) the tank is not on their property 2) he commented that if there were any impacts from the MGP site, then they would have seen them in the borings closest to the site 3) all of the soil, not just the soil along the northern third of the property, will be excavated out for the foundation and the garage 4) any contaminated water will

S108469795

be removed via a frac system. Mr. Gasparro asked for an approval letter. I told him that I will send him one. 3/10/08 - Raphael Ketani. I re-reviewed the RAP. I determined that the number of soil borings that had been performed by Langan Engineering and Landmark Consultants was not sufficient to determine the subsurface soil conditions. Therefore, I sent a letter requesting 11 additional soil borings, and associated samples. I included a map showing the locations that the Department was requesting be investigated. Also, I requested that Landmark Consultants submit specifications and plans for the vapor mitigation system for the garage. I also contacted Mr. Gasparro by phone (917) 743-4789 and informed him regarding the change in the Department's determination. 3/20/08 - Raphael Ketani. Today a messenger hand delivered the Supplemental Remedial Investigation Report (SRIR) dated 3/20/08 from Landmark Consultants, Inc. 3/21/08 - Raphael Ketani. I reviewed the SRIR. The 11 additional soil samples that DEC had requested did not show significant hits, or were non-detect. Fold out figures 2 to 4 show the locations of the 11 additional borings, the locations of the previous borings, and the areas to be excavated. The narrative to the report states that they will have an active venting system for the garage and a vapor barrier. I had no comments regarding the report. Landmark will send a closure report with end point samples once the excavation is completed. I checked the PBS records. There is no PBS case for this site. 3/26/08 - Raphael Ketani. Mr. Gasparro called to ask about DEC's review of the SRIR. I told him that we had approved it. He asked that DEC send an approval letter to Innocent Taziva, Assoc. City Planner, DEP, 59-17 Junction Blvd., 11th Floor, Elmhurst, 11373. I told him I will send the letter. The letter went out today. 04/14/08 - Ahmed - DEC Ahmed and Vought went to investigate the site at 11:00 AM. Met Super Larry Yockelson of the site. This is DEP "E" designated site. The contractor of the site: Rider Construction Inc. 119 West 40 Street Tel: 516 221 2233 Fax: 516 212 0254 Soil Mechanics (Tel: 516 221 2233, Fax: 516 212 0254) installed 3 monitoring wells a month ago and Applemon Corporation (151 S mountain Rd, Tel: 845 634 0858) took groundwater samples from the monitoring wells a week ago. The owner of the property: Lcor Incorporated One Penn Plaza, Suite 3310 New York, NY 10119 Tel: 212 760 0060 Fax: 212 760 0891 Found no sign of petroleum release or odor near the excavation inside the building or in the sump pit area for sewer. Noticed mixture of water and waste oil puddle on the concrete floor inside the building near N11 street. Noticed a bucket and a cracked basin filled with waste oil up to the cracks. The super was notified and he said he would make some phone calls to clean these. 2 Drums was also noticed in the area. Found no sign of fill port, UST or dispenser island. After discussing with Vought, DEC requirements: 1. Pump clean waste oil and remove drums. 2. cc DEP about the current status. 3. Get the analyticles of Soil and Groundwater samples taken by Soil Mechanics/Applemon Possible DEC requirements: 1. Vapor barrier or SSDS 4/15/08 - Raphael Ketani. I called up Andrew Gasparro of Landmark Consultants, Inc. (917) 743-4789 regarding the spilled waste oil inside the building and the poor method of transferring the oil to the drums. I told him that the spilled oil and associated mess had to be cleaned up immediately. He said he will get it done today. I told him that DEC needs to receive a cleanup report with pictures once everything is finished. He said DEC will get the report. 4/16/08 - Raphael Ketani. I received a call from Mr. Gasparro cell (917) 743-4789. He said that the owner is refusing to clean up the spilled waste oil and drums unless DEC sends

PARKING LOT (Continued)

S108469795

a letter requesting him to do so. So I sent LCOR, Inc. a strongly worded letter by mail and FAX (212) 760-0891 to the attention of Stephen Martinelli. The letter stated that if the spill is not cleaned up by 4/17/08, then fines will be issued counting from the date of the spill (4/14/08) and legal action will be taken. I added that the spill case will not be closed unless this spill is cleaned up. 4/18/08 - Raphael Ketani. I visited the site today. I met John Paulson, Jr. of Ryder Construction, Inc. He told me that Mr. Gasparro was at the spill location and was cleaning up the oil. Mr. Paulson, Jr. had one of his associates show me where this was. I was accompanied by Hassan Ahmed of Spills. We walked to a loading dock which was a covered area in the southwest corner of the property. Once there, I met Mr. Gasparro and his cleanup crew. He told me that they have been cleaning up the spill since 4/17/08. Mr. Gasparro explained that they had drummed up all of the oil and had sealed the drums. They were in the process of picking up some of the oil that was on the pool of water on the floor. They had a pile of spent pads. Mr. Gasparro explained that they will bring in a pump to suck up the water. They will drum up the water, also. Mr. Gasparro said that all of the water, oil, and empty containers will be carted away to the appropriate locations. He added that DEC will receive a cover letter explaining what went on, manifests for all materials removed, and pictures. I took 5 pictures (they are in Edocs). After this, we left the site. 4/24/08 - Raphael Ketani. I spoke to Tony Kloss of Impact Environmental (908) 534-8820. He said that Impact was hired by LCOR to oversee the work of Landmark. Mr. Kloss said that his company will deal with the historical fill, get a sample tested for classification, and see to it that the fill goes to the right place for disposal. They will start work tomorrow. Mr. Kloss also mentioned that there used to be a pump island at the east corner of the site (corner of Berry St. and North 12 St.). I rechecked the investigation reports for the soil boring locations and analytical results at this corner. There were no significant VOC or SVOC hits, and with the exception of 520 ppb of MEK in one soil sample from EB-1 collected by Landmark in 2006, there was nothing to note. 4/30/08 - Raphael Ketani. I called up Mr. Gasparro (917) 743-4789 and asked him about progress regarding cleaning up the oil and water at the loading dock. He said that it is all cleaned up and everything has been carted away. He said that he has pictures and manifests in a final report. He said that he will mail the report this week. 5/8/08 - Raphael Ketani. Today I received the Residual Oil Containment report dated April 27, 2008 from Landmark. I reviewed the report. From the report, I determined that the oil spill had been cleaned up. I tried to contact Mr. Gasparro and Mr. Kloss regarding the soil borings done on about 4/7/08 by Soil Mechanics and the groundwater sampling performed about the same date by Applemon. I could only leave messages. 5/12/08 - Raphael Ketani. Mr. Kloss called back (908) 534-8820. He said he will find out more about the wells installed by Soil Mechanics and the groundwater samples taken by Applemon. 5/28/08 - Raphael Ketani. Mr. Kloss called and stated that they found a bunch of 550 gal. fuel tanks. The top of the tanks are 2' below grade. They will dig out the tanks and the soil around them and then take end point soil samples. I told him that sounded fine. 6/6/08 - Raphael Ketani. I spoke to Mr. Gasparro (917) 743-4789 at 8:40AM today regarding a citizen complaint of many drill rigs and other work taking place at the site. He said that there are no drill rigs at the site. He said that they discovered 9 fuel tanks at the site and have removed them. I asked

S108469795

him for a report that includes the removal work. I asked him whether the site has an alternate address on Bedford Avenue. He said it didn't - just Berry Street. I asked him whether the site was ever an ink factory. He said it never was. On another note, I asked him what type of work Soil Mechanics and Applemon did on the site. He said that each company was on site at a different time. He said that each company did only water level measurements. I asked whether they did any drilling or water sampling. He said "No, they just used the wells that were already there." He added that water level measuring was the only reason for their presence. I visited the site and saw that the buildings had been torn down. I told Mr. Gasparro that DEC's latest information was that the buildings were going to be refurbished and floors added on. He said that was the original idea, but the architect said that the buildings were too unstable to add on to. So they were torn down. Mr. Gasparro said that the 9 tanks were sucked out and the tanks and contents removed. He said that one water tank was discovered and that the 8 fuel tanks were in the northern third of the site - under the former buildings. I saw a lot of black soil being dug up in the northern third and the part of the site along North 12 Street (see pictures in E-docs). Mr. Gasparro said this was all oil contaminated material. He said that they also detected 55 ppm of PERC in a soil sample. I asked him for the soil characterization analyses. He said that he will send them to me. The dark soil was being hauled out by trailer truck as I was standing there. One pile had a moderate oily odor when I was standing next to it. I told Mr. Gasparro to get it covered immediately. The material in the "L" shaped part of the site contained old brick, metal, broken concrete, rubber and other debris. Mr. Gasparro said that the material is going to Earl Soil in New Jersey. I asked whether Earl knows there is PERC. He said that it's part of the material characterization. In the southwestern quarter of the site (next to the old buildings that were standing next door), the soil had been removed exposing a light yellow brown sandy till with cobbles and boulders. This soil looked clean and had no odor. After this, I left. 6/9/08 - Raphael Ketani. I contacted Mr. Kloss of Impact Environmental (908) 534-8820 regarding registration of the 9 oil tanks and their contents. He said that Impact has already filled out the PBS forms and is just waiting for the owner's signature. He said he knows what was in each tank and that is indicated on the forms. I asked him what the liquids were. He said that it's diesel fuel and heating oil. Mr. Kloss added that only 8 tanks have been pulled. He said that there is a 10,000 gal. tank in the loading dock area that will be pulled when the Phase II work starts. He thought the Phase II will start this week. I told him to send in the forms as soon as they are signed. He said he will. He also stated that they were considering leaving some contaminated material along North 12 Street. I told him that no contaminated material can stay unless the analyticals show that it is at or below the TAGM limits. I told him to tell the owners that DEC wants this material removed. He said he will tell the owners. Mr. Kloss e-mailed me that he wanted a letter ordering him to remove the contaminated soil along North 12th Street. I sent him such a letter and c-c'd the owners, Mr. Taziva of DEP, and Mr. Gasparro. The letter also stated that they have to take end points samples all over the site to prove that they removed the contamination, take another round of groundwater samples, cover the soil piles and submit the PBS registration to Albany, and submit a letter from the disposal facility that states they are accepting the soil. 6/11/08 - Raphael Ketani. I sent Mr. Kloss an

S108469795

e-mail stating that the contaminated material that parallels North 11 Street and North 12 Street and is above TAGM has to be to the property line. I added that if there are structural or safety reasons for leaving the material, then the DEC needs a letter from a licensed engineer stating this and explaining the whole situation. The e-mail is listed below: Dear Mr. Kloss: The Department has re-reviewed book 1 of 2 of the Satisfaction of Little "E" Designation and Remedial Action Plan dated February 29, 2008 and produced by Landmark Consultants, Inc., and has generated a response as per our conversation today regarding the site. Our conversation today and page 7 of 10 of book 1 regarded leaving soil and artificial fill in place along the borders of the property that parallel North 11th Street and North 12th Street. The Department wishes to inform your client, Landmark Consultant, Inc., and Impact Environmental Remediation Services that at no time may contaminated soil and fill which exceeds TAGM limit concentrations be left on a site. All contaminated soil and fill above TAGM must be removed to the property line and under the sidewalks. The only exception is when removal of the contaminated soil and fill would pose a stability or safety hazard to people, property, and utilities. In such a case, a letter from an engineer licensed in the State of New York must be sent to the Department explaining that he or she has inspected the site, noted the conditions, and has determined that soil and fill can not be removed from specific locations. The letter must be accompanied by a plan showing where the areas are that will be left undisturbed. Should you have any questions, you may e-mail me or call me at (718) 482-4634. Sincerely, Raphael Ketani, MS, CPG
*****6/19/08 - Steve Sangesland. New spill number called in on 6/19/2008 - Spill #0803286. Oil bubbling up from the ground. 6/19/08 - Raphael Ketani. I called up Tony Kloss of Impact Environmental Remediation (the consultants; (908) 534-88200 and asked him where the oil came from. He said that he talked to the consultants on site and the crew and they told him it's not oil bubbling up from the ground, but oil contaminated water that is being sucked up with a guzzler from inside a coffer dam. As the site is being managed and remediated through spill case #0712424, I am closing the later case. 06/20/08 - Hiralkumar Patel. received complaint from neighbour about odors in area. visited site. found tank excavation field and contamination soil around. they were removing contaminated soil. minor odor noticed at construction site, but that could be result of soil disturbance. met Michael Ajviland (718-237-5125) from Impact environmental, who was monitoring air. as per him, no PID readings observed over background values. 6/20/08 - Raphael Ketani. I went to the site to check on the odor complaint. While standing outside the site, I smelled a sweet, yeast like odor, but nothing else. I met Mr. Gasparro. We walked the site. I took some pictures of the work that was taking place. I occasionally sensed a metallic, earthy odor and a sweet yeast like odor. Mr. Gasparro said that the sweet yeast like odor was from the brewery. There were no strong odors emanating from the site despite the fact that it was a very bright, warm day. After this, I left. 6/20/08 - DEC Piper - I recieved a call off hours of a vapor complaint. I spoke with caller (Stacy Raymond 718- 875-5200) and she was from a local political office. She was looking for an update. I spoke with DEC Krimgold and he was unsure of the site and wanted me to perform a site visit. I inspected the site the following mornning. There was no wntry though I was able to see over the fence. A tank partially butied was

MAP FINDINGS

PARKING LOT (Continued)

S108469795

observed as well as contaminated soil. there were no vapors at the street. 6/23/08- I performed an additional visit around 12pm to enter site. Lawrence Environmental Group, LLC. was on site and informed me of the work and that an existing spill was open. Todd Reichert and Mike Haviland, 847-237-5125 6/25/08 - Raphael Ketani. I received two phone messages from Glenda Zlamany (718) 387-3905, a resident of the building next to the construction site. The messages were received on 6/23 and 6/24 - when I was out of the office. I returned her calls. She was concerned about the digging at the site, the oily mess she sees, the oil in the water, the dust, and whether the excavation and remediation were being done properly. I had a long conversation with her and explained that the work crew needed to remove the dark material on site in order to clean it up. She said that the place smelled bad and smelled worse at times. She said that everyone in the area is complaining of headaches and that they are also complaining that they feel sick. Ms. Zlamany said that they have toxic sites all around her building and everyone is fearful. She said she saw oil on the standing water and that she knows there is a superfund site nearby with heavy metals. I told her that the air will smell bad at times as she lives right next to the site. She said she has young children at home, one of whom tested high for blood lead levels. She said that a neighbor also had young children under the age of 7. I asked her whether she had air conditioning. She said "Yes." I told her to close her windows, lower the blinds part way, put a fresh air filter in the air conditioner, and to run the air conditioner as much as possible. She said that the loft is 10,000 square feet and it is too expensive to air condition for long. She said she has a cleaning woman come in regularly, but there is lots of dust all over. I told her that the only alternative is to spend as little time in the loft as possible and to maybe take her kids elsewhere until the excavation stops, or slows down. I told her that even a light breeze will stir up dust and carry it into her loft. I told her it's really just her being right next to the excavation site that is causing the biggest dust problem. I told her that I will talk to the excavation site manager and see to it that they use proper dust suppression measures. She said that would be good. I tried to contact Mr. Kloss about the dust (908) 534-8820, but could only leave a message. Next, I contacted Mr. Gasparro (917) 743-4789 about the dust. He said that he has moved 4000 tons of material in the past week with 40 truck loads a day. He said that in 4 days this will slow down to one truck a day, and the sight will be graded. He said that contaminated material removal will not stop, but it will slow down. He said that 11 tanks have been removed so far and they discovered a 12th tank. He said that he will talk to his crew and make sure that they are diligent in spraying the water and keeping the dust down. He said that they have also sucked up 12,000 gals. of contaminated water and ran it through their FRAC tank. I asked him about the metals in the contaminated material. He said that they took soil samples and the results are not high for heavy metals or lead. I called back Ms. Zlamany and told her that the dust from the site doesn't have high levels of heavy metals or lead. I told her that the excavation will slow down a lot very soon. She said that sounded good. Ms. Zlamany sounded calm over the phone towards the end of our conversation. Mr. Kloss called me back. He said that IER was aware of the situation at the site and they are doing dust suppression. 6/30/08 - Raphael Ketani. I met Mr. Kloss (908) 534-8820 for a scheduled site visit. I took several pictures. They were sucking out water from the coffer

PARKING LOT (Continued)

S108469795

dam. They had set up eight large (about 15' by 15') forms on the site for the foundation. The odors were slight and smelled like a mix of rotten eggs, ash and cinders. They were not noticeable off site. I told Mr. Kloss to keep the dust down and to watch the odors. He said he will and added that all 12 tanks have been removed from the site. Mr. Kloss explained that once they put in one form in the northwest part of the site, oil started coming up. He had a vacuum truck (guzzler) on site and it quickly filled up. Mr. Kloss said that the off loading site for the truck was nearby and so it will be back today to take on a second load. Mr. Kloss said that they hit a thick clay layer under this part of the site and then the "oil" came up. I asked him whether he was sure it is oil. He said it smells like oil. I looked at the liquid. It had a dark amber color when pure, but emulsified to a milky, off-white color with water. There wasn't a lot of it and I believed the vac truck could recover this liquid completely with the next round of collection. After this I left.

7/8/08 - Raphael Ketani. Steve Sangesland told me that someone from the EPA had contacted him yesterday regarding the site. The person said that he had received numerous complaints of problems at the site I tried to contact Andrew Gasparro at (917) 743-4789, but he was on vacation. I tried to contact Mr. Kloss, but could only leave a message. 7/9/08 - Raphael Ketani. Mr. Kloss (908) 534-8820 sent me an e-mail today with an update regarding remediation progress. Thirty six soil end point samples were taken and IER is looking at the results, 6 groundwater wells were installed and they will sample on 7/24/08, and 24 soil samples were taken from the former tank graves. 8/20/08 - Raphael Ketani. I tried to contact Mr. Kloss, but could only leave a message. 8/25/08 - Raphael Ketani. Mr. Kloss sent me an e-mail update regarding the case. The printed e-mail is in the file folder. The e-mail concerned the installation of 6 wells on site. Three were installed around the footing in the northwest corner where the oil showed up, and the other three were installed in the northeast corner and the southern parts of the site. Groundwater monitoring will continue. The owner/operator of the site has authorized a pump and sample corrective action plan. The construction contractor is preparing to pour a concrete slab and install a vapor barrier. Mr. Kloss called me back. He said that the owner of the site wanted DEC's O.K. to pour the concrete slab. He said this will happen in 3 or 4 weeks from today. I told him that we can't do that because we never received the soil analytical samples. He said that he has the analyticals and there's a lot of data. However, he will send me the summary tables. 9/3/08 - Raphael Ketani. On 8/27/08, I received an e-mail from Mr. Kloss of Impact Environmental Remediation (908) 534-8820 containing VOC analytical data for 33 end point samples that were taken over the entire site. I reviewed the analytical results today. Many of the soil samples were completely non-detect. Fifteen samples had various VOC hits, but they were all well below TAGM limits. BER-EP-28 had a hit which exceeded TAGM limits, but the exceedence was low. BER-EP-23 had 6.391 ppm of 2-butanone (TAGM limit = 0.3 ppm). BER-EP-10 had 16.187 ppm of chlorobenzene (TAGM limit = 1.7 ppm) and 4.560 ppm of 1,3-dichlorobenzene (TAGM limit = 1.6 ppm). I tried to contact Mr. Kloss to discuss the results for EP-10 and EP-23, but could only leave a message. 9/8/08 - Raphael Ketani. Mr. Kloss called me back regarding the analytical results. He said that the soil was removed down to the water table at locations EP-10 and EP-23. 9/11/08 - Raphael Ketani. Mr. Kloss had sent an e-mail on 9/9/08 requesting a letter from DEC stating that no more soil removal

S108469795

was necessary based upon the soil analytical results DEC had received by e-mail on 8/27/08. However, the soil results did not include a site map showing where the samples had been taken. I sent Mr. Kloss an e-mail back requesting the soil sampling location map. 10/27/08 - Raphael Ketani. I tried to contact Mr. Kloss regarding a progress update, but could only leave a message. 11/6/08 - Raphael Ketani. I tried to contact Mr. Kloss (908) 534-8820 regarding a progress update, but could only leave a message. 11/7/08 - Raphael Ketani. Mr. Kloss returned my call and left a message. He said that he was out of town and will be until 11/17/08. He said that groundwater wells were installed at the site and that DEC should be receiving a report regarding the soil removal. 11/19/08 - Raphael Ketani. I had a meeting with Mr. Kloss here at the DEC Region 2 office. Mr. Kloss gave me a report containing ONLY the text, tables and pictures for the 9/5/08 Environmental Services Report (ESR) from IER. We discussed the case, and also the soil end point results and what needed to be done to collect more product and finish the remediation of the site. After the meeting, I reviewed the partial 9/5/08 ESR. The VOC soil analytical results were the same results as in the data that I had received on 8/27/08. The SVOC soil analytical results were new data for the site. However, there were no results of concern. I sent a letter to the following parties stating the DEC found the soil analytical results to be acceptable and to continue monitoring the groundwater and collecting any free product that is found: Stephen Martinelli, 34 Berry Street, LLC, c/o LCOR Incorporated, One Penn Plaza, Suite 3310, New York, NY, 10119 Peter Ellams, Lawrence Environmental Group, LLC, 350 Lexington Avenue, Penthouse Suite - 12th Floor, New York, NY, 10016 Tony Kloss, Impact Environmental Remediation, Inc., 26 Main Street, Flemington, NJ, 08822 Innocent Taziva, Assoc. City Planner, NYC DEP, 59-17 Junction Blvd., 11th Floor, Elmhurst, NY, 11373 The letter was sent today. 12/23/08 - Raphael Ketani. I tried to contact Mr. Kloss (908) 534-8820, but could only leave a message regarding the groundwater monitoring. 12/30/08 - Raphael Ketani. I tried to contact Mr. Kloss, but could only leave a message. 1/6/09 - Raphael Ketani. Mr. Kloss called me today. He said that IER will finalize a contract with LCOR in the next two weeks to continue the necessary work for the site. 1/22/09 - Raphael Ketani. Mr. Kloss e-mailed me today. He said that the owners, 34 Berry Street, LLC and LCOR, still haven't signed a contract with IER to finish the work and generate a closure report. 1/23/09 - Raphael Ketani. Today I sent a letter to LCOR, Incorporated, with "c-c's" to Tony Kloss of IER, and Innocent Taziva of NYC DEP. The letter stated that DEC hadn't received any reports for the groundwater monitoring, and the site investigation and remediation. As such, the environmental status of the site isn't known. So the DEC is considering that the site still contains contamination. The DEC holds LCOR in violation Article 12 of the NAV Law, sections 173 and 176, and will refer the case to Legal if the reports are not received by February 13, 2009. Fines and penalties can and may be issued. 1/28/09 - Raphael Ketani. I received the following e-mail from Mr. Kloss: Good afternoon. The owner/operator (LCOR Incorporated) of 34 Berry Street, Brooklyn, NY received the NYSDEC action letter dated 23 January 2009 for the contaminated groundwater corrective action project. We are in the process of finalizing a contract with LCOR Incorporated so that the groundwater corrective action project can move forward in a timely manner. Do you have time between 3-6 February 2009 or the week of 9

February 2009 to meet with me and a couple representatives from the owner/operator to review and discuss the groundwater project. We can meet at the site on a day and time that works best for you. I let Mr. Kloss know that Feb. 4 to 6, and the week of the 9th were alright for a site visit. 2/12/09 - Raphael Ketani. The scheduled site visit didn't take place. Mr. Kloss called some days ago to cancel as the client couldn't make it. Today, Mr. Kloss sent me the following e-mail: Per our conversation last week, I wanted to update you concerning NYSDEC Spill Case No. 0712424 for 34 Berry Street, Brooklyn, NY. The owner/operator of the subject property, LCOR Incorporated, informed our team that our revised proposal for the groundwater corrective action project has been accepted and the management board of LCOR Incorporated is in the process of approving and authorizing our revised proposal for the work. As soon as we receive the executed contract, our team will order the necessary equipment and materials for the project. We anticipated the fieldwork for the project to begin on or about the week of 2 March 2009. I will let you know the actual day/time that we intend to start fieldwork as the date gets closer and we'll continue to keep you in the loop. 2/27/09 - Raphael Ketani. Bill Craane (kron) of Sweet & Crawford Insurance (212) 401-1553 called regarding the site. He said that he is an insurance broker. He is trying to line up building construction insurance for the site, but he needs information regarding the status of the remediation and any further work. I gave him a synopsis of where things stand. I told him that groundwater well installation and monitoring still needed to take place. I added that a 40 MIL vapor barrier was required as part of the construction. 3/13/09 - Raphael Ketani. I tried to contact Mr. Kloss (908) 534-8820, but could only leave a message. I sent him an e-mail requesting information about the well installation part of the project. Mr. Kloss sent me the following e-mail: A total of seven (7) monitoring wells were installed at the 34 Berry Street site in Jun-Jul 2008. The wells were installed while the excavation was open and before construction started on the condo building. To the best of my knowledge, no groundwater work or monitoring has taken place at the site since the very basic work our firm did at the site in Nov-Dec 2008. We reviewed the NYSDEC letters dated 19 Nov 08 and 23 Jan 09 with the owner/operator (LCOR Incorporated) of the site. LCOR Incorporated is well aware of the groundwater work that needs to be done and their responsibility for the work. Over the past few months they have been telling our firm a contract is coming and at times they tell us they intend to use another firm. We wanted to help LCOR Incorporated meet the 13 Feb 2009 reporting deadline mandated by the NYSDEC but then LCOR Incorporated basically blew us off. I personally feel they used our firm to drag out and delay the work. I have not spoken to LCOR Incorporated for several weeks so I don't know the current status of the groundwater work at the 34 Berry Street site. 3/19/09 - Raphael Ketani. I found the PBS registration for the 12 USTS. It is #2-610890. However, there is a note in red that the tanks have not been officially registered. A letter in E-docs states that the Federal Tax I.D. is wrong, the deed of ownership wasn't submitted, and the installation date for each tank was left out. Nicholas Lombardo of the Region 2 PBS Unit told me that the LCOR never responded back. So the tanks will remain unregistered. I put together a Case Initiation package because the tanks are unregistered, the SIR was never submitted, and the groundwater data was never submitted. The package was signed by Randall Austin, Chief of the Spills Unit,

PARKING LOT (Continued)

S108469795

and forwarded to Louis Oliva, Regional Attorney for Region 2, for his signature. 3/20/09 - Raphael Ketani. Mr. Gasparro of Landmark Consultants (917) 743-4789 sent me an e-mail today: In regards to the above referenced project I would like to inform you that Landmark Consultants has been retained to install, maintain and closeout the groundwater spill. If you have any questions please feel free to contact me at any time. 3/24/09 - Raphael Ketani. Mr. Gasparro called me today. He said that LCOR has retained Landmark to do the installation and operation of the groundwater remediation system. He said that he will meet tonight with IER to work out a design and installation plan for the system. 3/26/09 - Raphael Ketani. I received the following e-mail from Mr. Gasparro: In regards to the above referenced spill I wanted to inform you of the fact that I spoke with Mr. John Urda in Legal as you recommended. I indicated that we are contracted by LCOR and will be acting on their behalf by putting together the Ground Water Remediation System and will expedite this procedure. It is our intention to get the design into your office by the end of next week and have the system up and running soon thereafter. I understand that LCOR did not meet the indicated deadlines however LCOR has made every effort since being contracted to ensure compliance. I will follow up with both you and Mr. John Urda on Monday, if you have any questions or concerns please feel free to contact me at any time. 4/15/09 - Raphael Ketani. Mr. Gasparro (917) 743-4789 called to say that the remedial system design has been completed. They will submit the design soon. They have gauged the thickness of the plume. They will start installation of the system in the next few days. They also have a sewer discharge permit. 4/20/09 - Raphael Ketani. Today I received the Remedial Action Plan Addendum No. 1 dated 4/15/09 from Landmark Consultants Corp. (718) 383-6800. I reviewed the document and disapproved it. I made the disapproval based upon the Landmark's failure to provide permeability calculations or flow analysis documentation in the plan that proves that only several wells are needed to collect and treat the contaminated groundwater. This is a large site with variable permeability, and the claim that each well will have a radius of influence of 50 feet just hasn't been proven. Also, a radius of 50 feet still leaves a large part of the groundwater out of reach of the wells. I drafted a disapproval letter for Randall Austin, Chief of the Spills Unit. 4/23/09 - Raphael Ketani. Mr. Austin approved the letter. I sent it out today. 5/11/09 - Raphael Ketani. On 5/5/09, Mr. Gasparro hand delivered the revised work plan for the site titled "Remedial Action Plan Addendum No. 1" dated 5/5/09. I reviewed the addendum today. The slug test data and graphs were presented for MW-2. Also, it was stated in the cover letter that there will be six (6) permanent monitoring wells. Mr. Gasparro added that the oil was seen in only the eastern half of the site. We discussed the slug test results, the oil collection system, and the future plans for the site. We also discussed Figure 2. I asked Mr. Gasparro to move MW-2, a future pumping well, further towards the north so that its radius of influence doesn't overlap so much with that of the Proposed Recovery Well Location, and in order to capture any oil that may still be present in the northeast corner of the site. Mr. Gasparro stated that he will have it moved more towards the northeast corner. Other than this, I didn't have any comments and found the Addendum to be acceptable. 7/13/09 - Raphael Ketani. I tried to contact Mr. Gasparro (917) 743-4789 regarding progress at the site, but could only leave a voice mail. 7/14/09 - Raphael Ketani. Mr. Gasparro called

S108469795

me back. He said that the groundwater remediation system has been installed and is functioning well. He said that the owners applied two weeks ago to DEP for a stormwater sewer discharge permit. While they wait for the permit to be approved, they are sending the collected water to a frac tank. The water from the frac tank is hauled away by truck as regulated waste. I asked Mr. Gasparro whether he applied for a SPDES permit. He said that he talked to people in the Division of Water and they told him that he didn't need the SPDES permit because he was planning to discharge no more than 8,000 gals. per day. Mr. Gasparro said that, so far, they have recovered 150 gals. of oil. He invited me to come down to the site and see the remediation system. I told him that I will. 9/11/09 - Raphael Ketani. I spoke to Mr. Gasparro. He said that he was working on the July and August monthly reports and was almost ready to submit them to DEC. He said that the product recovery system was collecting anywhere from 300 to 400 gallons monthly. We set up a site meeting for 9/15/09 at 10:30AM. 9/15/09 - Raphael Ketani. I met Mr. Gasparro as scheduled. The apartment building had been constructed to its full height and was enclosed by its walls. Electricity was available. We entered through the garage. Inside, I saw that the great majority of the work in the garage and the basement had been completed. He showed me the oil recovery and management trailer and the collection well locations. There were pipes overhead that connected the individual wells to the remediation trailer. Inside the trailer, there was a vapor stripping unit, a particulate collection system, the oil water separator tank, and a small 55 gal. oil holding drum which was connected to the separator. At the time of my visit, the separator contained black oil. It didn't smell like #2 oil or #6 oil. Mr. Gasparro said that the collection system had been sitting idle for 2 weeks while he was away so that the oil on the water table could build up and make collection more efficient. He said that, initially, there had been 4 feet of oil at well #1. This well sits in the northeast corner of the site and was the most contaminated location. Mr. Gasparro said that, right now, there is only about a couple of inches of product at well #1. He said that he is working on the July and August monitoring reports and will send them soon. After this, I left the site. 11/5/09 - Raphael Ketani. I tried to contact Mr. Gasparro (917) 743-4789, but could only leave a voice mail. 11/6/09 - Raphael Ketani. Mr. Gasparro called me back. He said that he has the August and September Monthly reports. He will send them. He also said that he is almost finished with the October Quarterly Report. He received the analyticals two days ago and is reviewing them. Mr. Gasparro said that he will send me all three reports very soon. He added that there was very little oil in the wells. 11/17/09 - Raphael Ketani. Today Mr. Gasparro hand delivered the July 2009 Monthly Maintenance Report, the August 2009 Monthly Maintenance Report, and the October 2009 Quarterly Groundwater Monitoring Results report. I reviewed each report. The July report indicated that 250 gals. of oil and 7,116 gals. of water were collected. The August report indicated that less than 20 gals. of oil and 4,000 gals. of water was collected. The collection system was shut down for part of the month in order to allow more oil to collect in the vicinity of the wells. The October report stated that groundwater flow was to the east while the pumps were not turned on. However, flow changed to the east and the north once recovery pumping began. Wells 1,2,3, and 6 have oil. Groundwater samples were collected on 10/2/05 from wells 3 (had no oil at the time), 4, and 5. The analytical results were almost

S108469795

entirely non-detect with consistent low benzo series hits from each sample, along with very low 2-methylnaphthalene, acenaphthylene, and phenanthrene hits. 1,2-dichloroethane and 1,2-dichloropropane hits were the only volatiles present. The former VOC had hits of 130 ppb and 95 ppb. 12/23/09 - Raphael Ketani. I tried to contact Mr. Gasparro (917) 743-4789, but could only leave a message requesting information about progress at the site. I got ahold of Mr. Gasparro. He said that he is working on the maintenance reports that he owes, and that he will send them to DEC by next Tuesday or Wednesday. The wells were resurveyed two weeks ago for the thickness of the oil. The quarterly report will go out the first week of January 2010. The owners are getting ready to show the building. So they will construct a room for his equipment in order to keep it out of view, and to make the garage look nicer. Mr. Gasparro said that everything will operate from there. The room should be completed by the first week in January. 1/4/10 - Raphael Ketani. I spoke to Mr. Kloss of IER (908) 534-8820. He said that IER has been contracted by the owners, LCOR, to write the closure report for the site work. This is IER's only responsibility regarding the site. Mr. Kloss said that he is waiting for information from Mr. Gasparro, Landmark Consultants Corp. 1/12/10 - Raphael Ketani. Mark Godick of AKRF (914) 922-2356 contacted me today. He was told by the owners, LCOR, to help with obtaining a letter from DEC stating that DEC is satisfied with the remediation that has taken place. Mr. Godick added that the letter should state that either nothing more needs to be done, or that the present oil collection system is satisfactory, and that the case can be closed with a stipulation that oil collection continue. Mr. Godick said that this letter from DEC would facilitate LCOR obtaining a "Notice of Satisfaction" from the NYC OER so that they can get a certificate of occupancy. I told Mr. Godick that I will have to present this issue to my supervisor, Randall Austin (Chief of the Spills Unit) and discuss whether DEC can issue such a letter. I told Mr. Godick that the DEC was very unhappy that the construction of the building went forward with lots of oil still to collect. I added that, however, we didn't want to stand in the way of any tax benefits LCOR would receive for completing certain phases of the construction. 1/14/10 - Raphael Ketani. I spoke to Dan Cole of the NYC Office of Environmental Remediation (212) 341-0964. I told him about the problems DEC is having with the project. Specifically, failure to properly register the tanks that were pulled, failure to submit monthly oil recovery reports, failure to keep DEC informed regarding the "sudden" appearance of oil in the northeast corner of the site. Mr. Cole said that the DEP and his office are also not satisfied with how things are going with the project. He referred to the tank pulling and the fact that there is still product to be recovered. He said that OER is not going to issue a Notice of Satisfaction and that OER will go along with whatever DEC decides to do project wise and legally. I told him that the DEC will not send LCOR a letter closing the project. I added that we will demand that monthly reports be submitted and that all of the oil be recovered before the DEC closes its spill case. I thanked Mr. Cole for talking to me and ended the conversation. After talking to Mr. Cole, I called up Mr. Godick and left a message that the DEC is not going to issue a remediation completion letter, nor is DEC going to issue a spill closure letter with an attached condition that oil collection has to continue. I stated that the DEC lawyer for the spill case will be informed that LCOR has failed to properly register the tanks, and has failed to

S108469795

submit monthly oil recovery/monitoring reports. Mr. Godick called me back. We discussed the failure of Landmark Consulting to properly register the tanks and to make monthly oil recovery/monitoring report submissions. I added that these failures have been relayed to our legal department by e-mail. Mr. Godick stated that he will work to resolve these matters quickly. 1/15/10 - Raphael Ketani. Mr. Gasparro called. We had a very long conversation regarding the project and the two big issues that DEC was very dissatisfied about, failure to properly register the tanks, and failure to submit reports on time. Mr. Gasparro said that part of the problem was that his company is overwhelmed with work. He asked how Landmark can rectify the problem. I told him he can start by submitting reports on time. He said that the fourth quarter 2009 report is almost complete and DEC should receive it by the third week of January. I told him that DEC never received the November and December 2009 reports. He said that, from now on, DEC will receive the monthly reports by the second week of the following month and the quarterly reports by the third week of the following month. I told him that would be fine. However, I asked him about the tank registration and the source of the oil. He said that he will propose to the owners a plan to look for the source of the oil off site. Though, he will leave the tank registration to another firm so that he can concentrate on getting the reports to DEC on time. I told him that our legal staff have been notified about the problems with this project and that they will be contacting the owners. Mr. Gasparro said that he understood. I asked him whether he had found the source of the oil. He said that he hadn't and that the oil is now appearing in a well that, up until recently, hadn't had oil. I asked him how much oil is still there. He said that it's a thin layer. Mr. Gasparro was very oppologetic and the conversation ended. 1/21/10 - Raphael Ketani. Mr. Gasparro hand delivered the September to December 2009 Monthly Maintenance reports, and the Quarterly Groundwater Monitoring Report - December 2009. 1/22/10 - Raphael Ketani. I reviewed the monthly maintenance reports and the December 2009 Quarterly Groundwater Monitoring Report. I had no comments regarding the monthly reports. From the December 2009 Quarterly Report, all of the wells were gauged on 12/11/09. Wells MW-3 to MW-5 were sampled on 12/11/09 as they did not have oil. Groundwater flow continued to be to the north. MW-7 had 0.03 feet of oil and MW-6 had 0.76 feet of oil. The great majority of the analytical results were non-detect. The groundwater sample from MW-3 had high tentatively identified analyte hits. A couple of chlorinated VOCs were detected in the samples from MW-4 and MW-5. Later, I spoke to Mr. Godick (914) 922-2356 about the December 2009 Quarterly Report and the monthly reports. I told him that DEC had no comments regarding the reports, except that there were a lot of non-target analytes in the water sample from MW-3. I added that we still don't know where the oil is coming from. Though there was an MGP site across North 12th Street. Mr. Godick said that this may be the source of the oil. I told him that it was strange that there were no signs of oil when the site was a series of water filled pits, but that, afterwards, the oil showed up. Mr. Godick asked that DEC meet with the owners and all of the other parties at the site so that a monitoring scheme and reporting procedure, and an off-site investigation plan can be worked out. We set up an appointment for January 27 at 9:30AM.

=====
I looked up the MGP site. It is known

S108469795

to DEC. However, it is not listed as an MGP site, just as a Superfund Site. The case number is #224069. The case manager is Robert Cozzy (518) 402-9768. The site is bounded by N. 12 Street, N. 13 Street, Wythe Avenue, and Berry Street. The database doesn't have much information in the E-docs, but the site is scheduled for review in 2010. The property is block 2283 and has several owners: lot 1 (northwest end): 94 North LLC, 23 Heyward Street, Brooklyn, 11211 lot 10 (central part of block; 121 N. 12 Street): Golden Fountain Realty, Inc., 121 N. 12 Street, Brooklyn, 11211 lots 33 to 38, and 41 to 43 (southeast third of block; 24 to 28 Berry Street, and 125 N. 12 Street): Mirtex Trading Corp., Mihata Corp., 20 Berry Street, Brooklyn, 11211 There is also a superfund site #224055 at Kent Avenue and N. 12 Street, about two blocks to due north. The case manager is Lisa Gorton of Central Office

DER. =====
=====1/26/10 - Raphael Ketani. I spoke to Gardner Cross (518) 402-9662, Section Chief in Albany DER regarding the two MGP sites near my oil spill site. He said that there is no MGP site across the street (case #224069). He said that this was just a remote gas holding facility and that no processing was done there. He added that the site may have used coal tar for lubrication purposes, but DER has found that the contamination at gas holders is very minimal when compared to actual former MGP sites. Mr. Cross said that this site was a commercial site from 1882 to 1905 and then was a gas holder from 1951 to 1965. He said that he didn't believe the oil was coming from here. However, Mr. Cross said that the North Williamsburg site (case #224055) at Kent Avenue and North 12th Street is an actual MGP site and that it is a mess with coal tar that has moved all over the place and for large distances. He believes that the oil we are seeing is likely from this site. Mr. Cross said that he case manager is Hank Willems (518) 402-9662/cell (518) 527-4877. Mr. Cross will try to get more information for me regarding this MGP site. 1/27/10 - Raphael Ketani. The scheduled site meeting took place as planned. In attendance were: Stephen Martinelli, Project Executive of LCOR Inc. (212) 760-0060; Marc Godick of AKRF; Andrew Gasparro of Landmark Consultants Inc; Gerard Baril, Director of Industrial Hygiene at Lawrence Environmental Group (212) 682-2001; and Peter Ellams, CEO/Managing Partner at Lawrence Environmental Group. Mr. Gasparro presented his oil collection system. It was the same system as was previously set up. His workers were doing the final work on the facility. Mr. Martinelli stated that LCOR wanted to be done with the spill so that they can rent to tenants by April 1, 2010. He stated that he would appreciate DEC's help in resolving the spill so that the project doesn't go "into the red." I told Mr. Martinelli that I will review the plans for the off-site groundwater monitoring as soon as I receive them. Mr. Godick then laid out the off-site monitoring plan verbally. We discussed various items back and forth. I informed everyone in attendance that there was an MGP site across the street and two blocks due north. I told them that the MGP site to the north is the North Williamsburg site and is known to Albany DER. I asked Mr. Godick to take a product sample from one of the wells and have it analyzed for the naphthalene and other chemical species that were not definitely determined in the last analytical report. I also asked Mr. Godick to install a data logger in one of the wells that doesn't have product so that we can see how much of a tidal influence there is under the site. Mr. Martinelli stated that the contractor who put in the elevator shaft waited until it was peak low tide in

MAP FINDINGS

PARKING LOT (Continued)

S108469795

order to start his concrete pouring. He added that this was so that the location of the dug pit would dry out on its own. Mr. Martinelli said that he saw a 2 foot drop in the groundwater during low tide. I asked that a groundwater flow map be constructed once all of the new wells have been installed. Next, I asked Mr. Gasparro whether there was a liner under the garage. He said that there was and that it is 60 MILs thick. We took a look at the venting system for the garage. Mr. Martinelli showed me a floor to ceiling automatic louvred panel (see E-docs). He added that the fans were ready to be installed. Finally, we went outside and took a look at the streets. Mr. Godick, Mr. Gasparro and I chose approximate locations for the 8 off-site wells. Two wells will be across from the apartment building where it fronts on Berry Street. Three wells will be in the sidewalk that is next to the apartment building on North 12th Street. The last three wells will be across North 12th Street from the wells that are next to the building. Mr. Godick said that he will send an off-site investigation plan to DEC very soon. After this, the meeting broke up. Later, Mr. Cross from Albany DER called. He said that many wells were installed at the North Williamsburg site and that the work finished up last week. He said that the North Williamsburg site is just south of the existing oil storage terminal and occupies a large area equivalent to two city blocks. Right now, a document storage building occupies the site. He added that MGP facilities typically used distillate feed stock and so the MGP oil may look like weathered diesel in the groundwater. Mr. Cross said that he is very interested in receiving any information I can give him about my site. 1/28/10 - Raphael Ketani. I sent the well installation letter to Mr. Godick, and the "permission to install wells" letters to Mirtex Trading/Mihata Corp. and Elrob Realty, LLC. 1/29/10 - Raphael Ketani. Mr. Godick (212) 696-0670 sent DEC a letter reprising the subjects that had been discussed during the 1/27/10 site meeting. The letter also contained an outline for the off-site investigation and monitoring plan. The work plan, itself, will be sent to DEC on or about 2/12/10. In the letter, Mr. Godick asked that the DEC not object to the Office of Environmental Remediation issuing a Notice of Satisfaction. This Notice would enable LCOR to obtain a Certificate of Occupancy from the NYC DOB. With the Certificate, Mr. Martinelli would be able to legally move renters into his building. A map plan accompanied the letter and showed the 8 locations for the off-site monitoring wells. 2/3/10 - Raphael Ketani. I contacted Dan Cole of the NYC OER (212) 341-0964. I explained to him the presence of oil under the site. I told him about the two MGP sites, the one across the street and the one two blocks north. I added that the DEC had asked for an off-site investigation in order to determine whether the oil was coming from the site or elsewhere. I said that the DEC is not satisfied that the spill has been resolved, and that we are also concerned that the presence of the oil could represent a more serious environmental situation and threat, particularly if the oil is coming from one of the MGP sites. Mr. Cole assured me that, if the DEC is not satisfied that the matter has been resolved, or if the DEC considers that there is a serious contamination issue at the site, then the OER will not issue its Notice of Satisfaction. Mr. Cole added that he would like to receive Mr. Godick's 1/29/10 letter. I sent Mr. Cole an e-mail containing the letter and the map for the 8 off-site wells. 2/16/10 - Raphael Ketani. On 2/12/10 I received by e-mail the Off Site Investigation Work Plan date February 2010, and the January 2010 Monthly Status Report. The January Status Report was

PARKING LOT (Continued)

S108469795

a recap of the past oil recovery system history, and the discussion and agreement regarding monthly reporting that took place at the site on 1/27/10. The Report also contained copies of correspondences for obtaining the NYC DEP sewer discharge permit, and a copy of the discharge permit itself. I reviewed the Off Site Investigation Work Plan. The Health and Safety Plan was attached to the Work Plan. I skimmed over the HASP, but had no comments. I did not give approval or disapproval of the HASP. I reviewed the Work Plan itself and found that it contained a summary of the previous investigations and the boring/well installation plan. The plan looked acceptable and was described as agreed upon during the 1/27/10 site meeting. My only comments were that the laboratory analyses should be the expanded versions of methods 8260 and 8270, that well sampling should take place no sooner than 2 weeks after development, and that copies of manifests should be submitted for all materials which are shipped out for disposal. 2/19/10 - Raphael Ketani. I received the letter that I had sent to Elrob Realty requesting permission to drill next to their property. The envelope was unopened and the green return card was missing. Becky Kinal of AKRF (914) 922-2362 called and stated that they haven't received permission from the other land owners allowing them to drill in the sidewalks bordering their properties. I told Ms. Kinal that I hadn't received a green return receipt card from the Mirtex/Mihata yet. So I was hopeful that they did accept the letter and that I will get confirmation soon. I added that Elrob Realty sent the letter back without opening it. She asked me whether I could take some action by letter or phone call so that DOT will grant the permit. I told her that I would be willing to do this. I asked her to find out who the contact person is at DOT and I will speak with him or her. She said that she will get back to me. 3/3/10 - Raphael Ketani. Ms. Kinal sent me an e-mail stating that the off-site drilling project will start on 3/5/10 and continue into next week. 3/5/10 - Raphael Ketani. Ms. Kinal called me today. She said that the off-site drilling project had started. However, there was some miscommunication between AKRF and one of the other consulting firms. She didn't state which one. Ms. Kinal said that the consultants hadn't brought cement with which to make concrete-bentonite grout. Also, this same company had installed a couple of wells already, but hadn't taken soil samples. She asked whether bentonite by itself could be placed in the well annulus in place of the grout. I told her that these wells may be needed in the future and should therefore be constructed in a permanent fashion. I told her that there should be bentonite grout through the wet and moist interval, including the capillary fringe zone, and neat cement above this horizon. She said that she will have them do this. She also said that borings will be done next to the wells that are already in place in order to collect soil samples. I asked her how close the borings will be to the wells. She said that they will be near each respective well, maybe within 3 feet. I told her that drilled holes are rarely perfectly vertical. I added that in order to avoid running into the well casing and the screen, the new borings should be no closer than 5 feet from each well. Ms. Kinal said that this will be done. She added that the contractor didn't have 5 foot sections of screen, but only 10 foot sections. She asked whether it would be alright to build 20 feet of screen with several feet above the mean water level. I told her this would be alright. 3/11/10 - Raphael Ketani. I received an e-mail from Ms. Kinal stating that they had completed the well installation and adjacent borings on the southern

PARKING LOT (Continued)

S108469795

side of North 12th Street on Monday, 3/8/10. The borings/wells are SB-1/MW-8, SB-2/MW-9, and SB-3/MW-10.4/1/10 - Raphael Ketani. I tried to contact Ms. Kinal (914) 922-2362, but could only leave a message. 4/2/10 - Raphael Ketani. Ms. Kinal called today. She said that she is still working on obtaining the permits to install the rest of the wells. She said that she will talk to Mr. Gasparro today to see whether he obtained the permits. She hopes to start the drilling and well installation next week.4/12/10 - Raphael Ketani. I tried to contact Ms. Kinal to find out what progress had been made regarding obtaining the well installation permits, but could only leave a message. A conference call took place today between Dan Cole of the NYC Office of Environmental Remediation, Randall Austin (Chief of the Spills Unit) and myself. Mr. Cole stated that the owners of the property had requested a temporary Certificate of Occupancy. He wanted to know whether conditions at the site would allow the building to be occupied. He asked about the status of the site. We explained that there was oil on the water table and that an investigation was taking place to try and figure out whether this oil was from on-site or off-site. We explained the history of the investigations and remediation that had taken place up to today. I also told Mr. Cole about the existence of an MGP site about two blocks to the north of the site, and that the oil from this site has been found all over the area. We discussed all of the environmental conditions at the site. I mentioned that several wells have already been installed during this latest investigation to try and determine where this oil is coming from. I added that more wells in this latest investigation will be installed across the street from the apartment building. Mr. Cole ended the conference call by stating that he will ask Mr. Godick of AKRF to schedule a PID vapor survey for the basement garage and the first floor (see E-docs).4/13/10 - Raphael Ketani. Ms. Kinal (914) 922-2362 called me today. She said that the installation of the off-site wells started, again, yesterday. She said that she expected the work to continue through the week. She will keep me informed. I received an e-mail today that a PID survey of the basement/garage and the first floor of the building was to take place today at 1:45PM. I went to the site and met Bryan Zeiroff (914-922-2382) from AKRF, and his assistant, Matt Oleske. I also met Stephen Martinelli of LCOR. Mr. Oleske first filled out the ambient air pre-survey checklist that lists all of the site conditions, appliances, and appurtenances. I asked him when his PID meter had been calibrated. He said today. Then we visited the basement and garage. As we stepped out of the elevator, I had a PID meter reading of about 630 ppb of total volatiles. Mr. Olesky had about the same reading. It turned out that one of the utility rooms was being used as a paint storage room. This room was near the elevator bank. There were many open cans of paint in the utility room and the PID meter detected up to about 6 ppm of total volatiles. We went to other storage and utility rooms and found results that varied greatly from 0 ppb to about 1200 ppb and back again. The air was stagnant in these rooms and about 70 degrees Fahrenheit. Next, we went to the garage. The garage temperature was on the cool side. Mr. Oleske and I checked the gaps around the well manhole covers, at the expansion joints, at the sewer grates and at the SSDS pipe joints. No VOC hits were detected. However, the air had a moderate odor from the brewery nearby. The meter readings of the ambient air changed greatly from 0 ppb to about 300 ppb and back again. Over the course of this part of the the survey, Mr. Oleske and I obtained very similar readings.

Site

Database(s)

EDR ID Number
EPA ID Number

PARKING LOT (Continued)

S108469795

After this, we visited the first floor apartments. The hallway at the first floor had an odor of fresh shoes (fresh leather). Tape was holding down the protective plastic covering which had been laid over the carpet. The PID readings varied from 0 ppb to about 300 ppb and back again. However, no volatiles were detected at the elevator banks. We entered about 15 apartments. The PID readings varied greatly from 0 ppb to about 4 ppm and back again over the course of surveying all of the apartments. There was no pattern to the detections. However, my PID meter mostly registered 0 ppb. In each room, there was blue masking tape (which the PID meter reacted to) and relatively fresh paint on the walls and ceilings. Mr. Martinelli also told me that the contractors had used caulk to fill in cracks and had used glue to attach the counter tops to the sink counter. The air was stagnant in each room (unless someone opened up a patio door) and about 72 degrees Fahrenheit. After this, I left the building. Later, with Mr. Austin's approval, I sent my case notes for the above inspection to Mr. Cole. 4/16/10 - Raphael Ketani. Today I received the Indoor Air Screening Report dated April 2010 from Ms. Kinal. The report was also sent to Mr. Cole. I reviewed the report and had no comments. 4/20/10 - Raphael Ketani. Mr. Cole sent a Notice of No Objection letter to the NYC DOB. The No Objection was in regards to the DOB granting LCOR a temporary Certificate of Occupancy. I read the letter and had no comments. 5/24/10 - Raphael Ketani. I spoke to Ms. Kinal (914) 922-2362. She said that all of the wells were installed, but that development and sampling had not taken place. She said that the well installation work took place without a contract with LCOR. So the work stopped as the costs needed to be reduced. However, Ms. Kinal said, now that the DEC is calling about progress on the project, she will contact Mr. Martinelli of LCOR and tell him that the rest of the work needs to take place soon. I told her that sounded fine. She said that she hoped the work will restart by the end of this week (5/28/10). I sent Ms. Kinal an e-mail regarding our conversation. 6/22/10 - Raphael Ketani. Ms. Kinal called with an update. The contractual issues have been settled. She said that all of the wells are in. Well development work will start on 6/28/10. Groundwater sampling will take place on 7/28/10. A tidal survey will take place one week later. Landmark is still collecting oil. A status report will be sent to DEC in the near future. 9/23/10 - Raphael Ketani. I tried to contact Ms. Kinal (914) 922-2362, but could only leave a message. 9/24/10 - Raphael Ketani. Ms. Kinal called me back. She said that they have the soil and groundwater data, but they have not done the tidal survey. This will be done next week. She expects to complete the report and send it out sometime during late October. 10/15/10 - Raphael Ketani. I received the second quarter Status Report dated 10/15/10 from AKRF. I reviewed the report, but had no comments. They have been collecting a lot of oil. Several wells continue to have product and one off-site well had 1.5 feet of oil. 11/8/10 - Raphael Ketani. LCOR and AKRF had failed to submit monthly monitoring reports and some quarterly monitoring report. They had also failed to regularly submit groundwater monitoring data, well gauging data, oil collection data, a groundwater flow map, tidal fluctuation measurements, and an off-site oil fingerprint. As a result of these deficiencies, I drafted a letter to LCOR requesting this documentation and stating that they were subject to fines and penalties. I sent the draft letter to Mr. Urda of DEC Legal. 11/10/10 - Raphael Ketani. The letter was approved by Mr. Urda and sent out today to Mr. Godick. Copies of the letter went to Mr. Martinelli and

PARKING LOT (Continued)

S108469795

to Mr. Cole. I also left Mr. Cole a voice message regarding the matter. A deadline of November 26, 2010 was set for receipt of the documents and data. 11/15/10 - Raphael Ketani. Ms. Kinal (914) 922-2362 called me today. She said that things had been mis-coordinated between LCOR, AKRF, and Landmark. She said that AKRF will send the missing data. I told her to send a third quarter report with all of the data that AKRF has up to the end of October. She said that she will. Ms. Kinal also stated that the DEC will receive an off-site report. She said that no oil was seen in the off-site wells and that the data logger didn't sense a tidal influence. I told her that as long as the DEC receives the required data, then the case will not be referred for legal action. 11/24/10 - Raphael Ketani. Ms. Kinal called me today. She said that she is sending the off-site report and the latest quarterly report by e-mail. I should see them soon. Later, I received the Third Quarter Status Report dated 11/24/10 and the Off-Site Investigation Report dated November 2010 from AKRF. I began my review. 11/29/10 - Raphael Ketani. Today I talked to Mr. Cole (212) 341-0964 of the NYC OER in the Mayor's Office. He asked whether I had received the required reports. I told him that I had, but that I hadn't reviewed them yet. I told him about the coal oil refining sites that were depicted as being within the property boundaries on Figure 3 of the Off Site Investigation Report. I added that these facilities had never previously been shown. He found this curious. I also stated that it is possible that the oil is coming from pockets under the sidewalk or under the street. Mr. Cole said that the owners still had a temporary Certificate of Occupancy. He was wondering whether the T C of O should be renewed. Mr. Cole asked me to keep him informed. 12/1/10 - Raphael Ketani. I finished my review of the Third Quarter Status Report. Product thickness data was present up to 10/6/10. Wells MW-2, MW-3, and MW-6 consistently had product. The groundwater sample from well MW-4 had 27,000 ppb of a particular chlorinated solvent. I had no comments. I finished my review of the Off Site Investigation Report. Groundwater was found to be 8 to 11 feet below grade. Flow was to the east. No tidal influence was found during the continuous groundwater level monitoring using the pressure transducers. The oil that they have been collecting was fingerprinted as a mix of weathered #2 oil or diesel fuel. The age of the oil was placed at greater than 20 years old. The soil analytical results for the off site borings were almost entirely non-detect for VOCs. The limited number of VOC hits were well below TAGM. The soil sample from SB-2 (13'-14') had 66,000 ppb of phenanthrene with highly elevated hits of anthracene (11,000 ppb), acenaphthene (4,800 ppb), fluorene (15,000 ppb), pyrene (2,300 ppb) and other SVOCs at above one thousand parts per billion. The SB-1 (12'-13') sample had 9,900 ppb of phenanthrene, 19,000 ppb of 2-methylnaphthalene, and other hits above one thousand parts per billion. Several soil samples from SB-3 had SVOC hits up to 14,000 ppb of phenanthrene. SB-5 (10'-11') had 5,100 ppb of pyrene, 4,100 ppb of phenanthrene, 2,800 ppb of fluoranthene and a few other elevated hits above one thousand parts per billion. SB-6 (9'-11') and SB-7 (9'-11') each had a few SVOC hits above one thousand parts per billion. The SVOC results for soil samples from the other borings, and for other analytes from borings which had high hits, were largely non-detect. VOC and SVOC results for the groundwater samples were almost entirely non-detect. There were a small number of very slightly elevated results (as in MW-13), but they weren't significant. At the end of the report, AKRF recommended enhancing the fluid/oil recovery system in order that it

S108469795

may recover more oil and operate for longer periods of time. They also recommended incorporating the off site wells into the groundwater monitoring program in order to get a better idea regarding groundwater flow and in order to see whether oil from off site appears. 12/2/10 - Raphael Ketani. I let Ms. Kinal (914) 922-2362 know that the DEC had approved the Third Quarter Monitoring Report and the Off Site Investigation Report. I also told her that AKRF now owed the DEC the November Monthly Monitoring Report. 12/15/10 - Raphael Ketani. Ms. Kinal sent me the November 2010 update report. She also wrote that LCOR is planning upgrades to the LNAPL recovery system, which will include adding recovery pumps to MW-3 and MW-6. The upgrades will be completed in January. I reviewed the November 2010 report. Wells MW-3 and MW-6 continue to have product. Well MW-6 had 1.5 feet of product. About 55 gals. of oil was collected during November. Groundwater flow continues to be to the east (off site). I had no comments. 3/3/11 - Raphael Ketani. I tried to contact Mr. Cole (212) 341-0964 regarding whether he had heard anything from LCOR or AKRF. However, I could only leave a message. I spoke to Ms. Kinal (914) 922-2362. She said that AKRF is still working on the fourth quarter 2010 progress report. I told her that AKRF is behind by a few months regarding submitting the report to the DEC. She said that she knew, but she stated that the report is almost ready for submission. I asked her whether there were any problems. She said that one party wasn't being as cooperative as she would like, but AKRF has all of the data. She wouldn't say who this party was. I told her that the DEC will be a little more patient, but we would really have liked to have had the report a long time ago. I asked her what is presently taking place at the site. She said that pumps were put into MW-3 and MW-6 in January 2011. She said that, off the top of her head, she believes that 100 gals. of oil were recovered during January. I asked her whether the off site wells were being used. She said that they are part of the groundwater monitoring array, but none of them have had oil. 3/17/11 - Raphael Ketani. Ms. Kinal sent me an e-mail containing the Fourth Quarter 2010 Status Report. The reporting period actually covered from October 2010 to January 2011. I reviewed the report. Oil recovery pumps were installed in wells MW-3 and MW-6 in order to increase the recovery of oil. Sixty seven gallons of product were recovered during the reporting period. Wells MW-3 and MW-6 had product during each month of this period. They had from 0.17' to 0.4' and 1.01' to 1.5', respectively. MW-2 had from 0.69' to 0.97' of product during two months. MW-1 had 0.13' during one month. Groundwater samples were taken from MW-4 to MW-6 and the results showed mostly low concentrations of some PAHs. 6/7/11 - Raphael Ketani. As the first quarter 2011 status report was never sent, I sent Ms. Kinal (914) 922-2362 an e-mail requesting the report. Ms. Kinal returned my e-mail. She wrote that the first quarter 2011 report was being put together. 6/17/11 - Raphael Ketani. Deborah Hamblett of EBI (781) 552-9176 called. She said that EBI had been hired by Northwestern Mutual (a lending institution) to do an environmental site assessment of 34 Berry Street. She said that she had been to the site. She wanted to know details about the environmental conditions. I told her about the history of the investigation and remediation, and about the presence of the oil below the building. I stated that Landmark was regularly collecting the oil, but no one knew where it was coming from. I added that the site had been dug out down to the groundwater and the oil was not present before the building was constructed. We discussed more

PARKING LOT (Continued)

S108469795

details about the oil and the site and the surrounding area. After this, the conversation ended. 7/26/11 - Raphael Ketani. I sent Ms. Kinal (914) 922-2362 an e-mail requesting the first quarter 2011 status report. 7/27/11 - Raphael Ketani. Ms. Kinal sent me an e-mail stating that the DEC should receive the first quarter 2011 report by the end of this week. She also stated that the second quarter report will be delivered sometime next week. 9/13/11 - Raphael Ketani. I contacted Ms. Kinal (914) 922-2362. I told her that the DEC still hadn't received the first quarter 2011 status report. Ms. Kinal said that the report was sitting on her desk right in front of her. She added that it covered the first, second and third quarters of this year. She had been waiting for two minor comments on the report, but she will send it out anyway by e-mail. I told her that she had told me before that she was going to send the report, but never did. Ms. Kinal stated that the DEC will receive the report today. I warned her that if the report is not received by today, then I will contact our legal division for action against the owners for failure to submit the reports. Ms. Kinal assured me that I will receive the report in a few hours. Ms. Kinal sent me the 9/13/11 AKRF OM&M Status Report and the Inspection Log forms for the months of January to July for 2011. A vacuum truck collection event took place on 8/2/11. A total of 400 gals. of product and water were collected. NAPL has appeared in wells MW-2, MW-3 and MW-6 during all six collection events. MW-6 had the most NAPL, but the thickness decreased during the reporting period from greater than 1 foot to about 0.5 feet. NAPL appeared in MW-1 only during February 2011. Wells MW-4, MW-5, MW-7 to MW-14 never had NAPL. Groundwater samples were taken from MW-1, MW-4, MW-5 and MW-7 on 8/9/11. The sample from MW-4 was the only one that had significant VOC hits: 66,000 ppb of 1,2-dichloroethane and 2500 ppb of 1,2-dichloropropane. There were several SVOC hits, but they were very low or non-detect. Groundwater flow from February to August 2011 was generally to the northeast and off-site, with a few instances where the low point was in the center of the property. The 2/11/11 inspection log indicated that 165 gals. of product were collected from wells MW-2, MW-3 and MW-6 since the last vacuum event. The February and March logs had nothing special to report. Well gauging took place on 2/10/11, 2/14/11, 4/11/11, 5/10/11, 6/15/11 and 7/13/11. Product was collected on 2/24/11, 5/12/11, 6/21/11 (approx. 26 gals.), 7/7/11 (approx. 22 gals.), 7/21/11 (approx. 30 gals.) and on 8/1/11. A total of 198 gals. of NAPL were recovered from January to August 2011. 10/19/11 - Raphael Ketani. I spoke to Ms. Kinal (914) 922-2362 (Becky). She said that she will send the DEC a report covering the work which had taken place during August and September. The next round of groundwater sampling is scheduled for November 2011. 11/10/11 - Raphael Ketani. Mr. Godick (914) 922-2356 called yesterday and left a message. He wanted to discuss the site. I returned his call, but could only leave a message that the DEC was owed a report for work that was performed during August and September. I stated that Ms. Kinal had said that the DEC was going to get the report, but we never received it. I mentioned that he had told me in a face to face meeting that the failure to report issue would be rectified once and for all. I added that if the report was not received by the end of November, then the case would be referred to our legal division for action. Later, Mr. Godick called me back. We discussed the failure of AKRF to send the monitoring reports in a timely manner. He said that he will deal with Landmark Consulting (the consulting contractor who does the actual product collection and

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

PARKING LOT (Continued)

S108469795

data management) and see whether they can report the information to AKRF on a timely manner. If not, then he will have another contractor do the product collecting and AKRF will do the data management themselves. Mr. Godick added that the case may also be reassigned to someone else in AKRF for more efficient report production and submission. I told him that the product just keeps coming and that it was up to 1 foot thick in a particular well. I added that without the reports, we can not know what is going on. Mr. Godick said that he thought the oil was coming from the site itself and that he will straighten out the reporting. On a different note, Mr. Godick asked whether the DEC can send a STIP to LCOR. I asked him why he would want to do that as this asks for trouble. I reminded him that there would be a formal requirement for timely quarterly reporting. If the reports do not come on time, as they have not been, then LCOR would incur stiff fines. Mr. Godick said that the Mayor's office of OER had issued a temporary certificate of occupancy (C of O) and LCOR wants a permanent C of O. They believe that OER would give them this when a STIP is in place. I told him that I will talk to our legal people about this request. 11/21/11 - Raphael Ketani. I received the AKRF OM&M Status Report for the period 8/10/11 to 10/31/11. On 10/4/11, Landmark was issued a violation by the NYCDEP for exceeding the discharge limits. On 10/17/11, 375 gals. of liquid were vacuumed out of the collection system (220 gals. of NAPL and 155 gals. of water). Landmark cleaned out the collection system and made some changes. They expect to receive a written confirmation from the DEP during the week of 11/21/11 stating that they can continue to discharge liquids. Gauging of the wells took place on 9/8, 9/22 and on 9/29/11. MW-1 had 0.01' of product, MW-2 had 0.01' to 0.1' of product, MW-3 had 1.02' to 1.57' of product and MW-6 had 0.35' of product. Groundwater was sampled on 9/22/11 from the wells that didn't have product. These were MW-1, MW-4, MW-5 and MW-7. Only MW-4 had high analyte hits. These were 32,000 ppb of 1,2 dichloroethane, 1400 ppb of 1,2 dichloropropane, 170 ppb of trichloroethene and 1.8 ppb of tetrachloroethene. The rest of the VOCs were low to non-detect. The SVOCs for all of the samples were very low to non-detect. The 9/8, 9/22 and 9/29/11 groundwater flow maps all show groundwater flow generally to the northeast and generally towards MW-7. I sent a response e-mail that AKRF must continue to collect product on at least a weekly basis despite the ban by the DEP on any discharges to the sewer system. 12/14/11 - Raphael Ketani. Scott Deyette of Albany DER called. He said that the investigation of the area around the former MGP site was progressing. A drilling rig was on Wythe Avenue right now. Borings and wells are being installed along the right of ways. The first well, MW-2, was installed between Wythe Avenue and Berry Street. Sheen, staining and odors were noticed from a sample taken at 16 feet down. I told Mr. Deyette that the consultants are still collecting lots of oil from the wells in the basement of the site. 2/6/12 - Raphael Ketani. Bryan Zieroff (914) 922-2382 sent me the AKRF November 1, 2011 to December 31, 2011 OM&M Status Report. I reviewed the report. The product collection system was shut down on 10/4/11 due to a discharge violation issued by the NYC DEP. It was not running continuously until 11/29/11. Fluid gauging took place on 12/14/11 and 12/15/11. MW-2 had about 0.13 feet of product. MW-3 had 0.76 to 0.96 feet of product. MW-6 had 0.17 to 0.6 feet of product. Groundwater flow was not discernible from the diagrams included in the report. Flow appeared to center on whichever well was being pumped. Groundwater samples were taken from MW-1, MW-4, MW-5 and

Map ID

Site

Database(s)

EDR ID Number
EPA ID Number

PARKING LOT (Continued)

S108469795

MW-7. All of the results were either ND to about CP-51 standards, except for those from MW-4. MW-4 had 1,2-dichloroethane 51,000 ppb and 170 ppb TCE. AKRF recommends shutting down MW-1 as the amount of product has been very slight and installing an additional recovery well near MW-3 and MW-6. Also, they recommend continued monitoring and recovery. I sent an e-mail approving the report and the recommendations. 3/9/12 - Raphael Ketani. Mr. Zieroff sent me a response e-mail. He stated that AKRF is moving forward with plans to install a new product collection well. Also, he said that they have been meeting the NYC DEP permitted discharge limits, despite the presence of 1,2-dichloroethane. Lastly, Mr. Zieroff asked whether AKRF can switch to just quarterly sampling. I wrote back that as the reporting has been sporadic, the DEC will maintain its requirement that quarterly and monthly reporting still take place. In another e-mail, Mr. Zieroff stated that the results from the discharge samples showed that the concentration of 1,2-dichloroethane was 7 ppb. 5/11/12 - Raphael Ketani. I spoke to Mr. Zieroff (914) 922-2382/(917) 583-4924 regarding progress at the site. He said that the additional product recovery well was installed between MW-3 and MW-6. The pump was taken out of MW-2 and installed in the new wells. It is already collecting product. However, the product thicknesses are lower than usual. Also, the water table is high. A set of reports is being finalized regarding monthly monitoring and product collection. DEC should receive them soon. 6/28/12 - Raphael Ketani. Mr. Zieroff (914) 922-2382/(917) 583-4924 sent me the AKRF OM&M Status Report for January to April 2012. There are five (5) product recovery wells that pump 2 gpm: MW-1, MW-2, MW-6, MW-7, and MW-16. There is one (1) product recovery well that pumps at 5 gpm, MW-3. The new recovery well, MW-16, was installed north of MW-6. It was screened to 12.5 feet below the water table and began pumping on 4/20/12. A total of 111 gals. of NAPL were recovered from January to April of 2012. Product was present in wells MW-2, MW-3, MW-6 and MW-16. Groundwater samples were collected on 3/27/12 from wells MW-1 and MW-4 to MW-7. MW-4 had 30,000 ppb of 1,2 dichloroethane, 1200 ppb of dichloropropane and 140 ppb of TCE. MW-7 had 100 ppb of benzene. MW-1 had 240 ppb of 1,2 dichloroethane. The rest of the analytical results were either non-detect or below unrestricted standards. AKRF made a request to discontinue pumping from well MW-7 as no product had been recovered during the past 4 months. I drafted a letter to AKRF approving the report and stating that the DEC agreed with the decision to stop pumping from MW-7 and to continue pumping from wells MW-1, MW-2, MW-3, MW-6 and MW-16. Also, I stated that if the product is not recoverable by pumping, then they should resort to other collection methods, such as socks, or let the subject well stand idle so that product will pool around the well and then turn on the pump for a short period of time. I added that only when there is no collectable product for two consecutive quarters should the case be considered for closure. I set a deadline of July 13 for the submission of the May 2012 monthly report. The letter was submitted to Hassan Hussein, head of Unit C, for his review. 6/29/12 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 7/20/12 - Raphael Ketani. The May 2012 monthly report was never received. As it has been very difficult to get monthly monitoring reports from AKRF, and as they are late again, I submitted a draft STIP for LCOR to be reviewed by Mr. Hussein. 7/23/12 - Raphael Ketani. Mr. Hussein and Mr. Urda approved the STIP package and it was sent out today with a green return card. 8/23/12 - Raphael Ketani. Today I received the

signed green return card indicating that Mr. Martinelli at LCOR had received the STIP package. 9/13/12 - Raphael Ketani. Mr. Martinelli sent me an e-mail stating that his company wanted the STIP to reflect that 34 Berry Street, LLC was the owner of the site, not LCOR. I revised the STIP and sent it out by e-mail with a due date of October 12, 2012. Later, I started my review of the May 1 through June 30 OM&M Status Report. This report contained product gauging and collection data and analytical data. The product extraction system now consists of wells MW-1 to 3, 6, 7, and 16. Gauging took place on 5/24/12, 5/25 and 6/7 and 6/8. Fifty five gallons of product were recovered during this period. Free product appeared in MW-1, 2, 6, and 16 (mostly). Wells MW-3 to 5 and MW-7 and the offsite wells (MW-8 to MW-15) did not have product. Product hadn't been seen in MW-1 since September 2011, but reappeared during May 2012. MW-16 had 0.76 feet of product in May and 0.02 feet in June. Groundwater flow is to the northwest. Groundwater was sampled on 6/8/12 from wells MW-1, 3, and 4 to 7. MW-2 and MW-16 had product so groundwater wasn't sampled from these wells. AKRF recommended discontinuing product collection from MW-7 as oil had not been seen in 6 months. They also recommended recovery product from MW-1 to 3, 6 and 16. The analytical results for MW-1 and 3 to 7 were: MW-4 had 16,000 ppb of 1,2-dichloroethane, 830 ppb 1,2-dichloropropane, 120 ppb TCE, and 6.6 ppb benzene; MW-1 had 520 ppb 1,2-dichloroethane; MW-3 had 180 ppb benzene. All of the other VOC hits for these wells and the other sampled wells were almost entirely below GA standards. The SVOC hits for all of the samples were almost entirely non-detect or below the GA standards. Product thickness during the 6/8/12 groundwater gauging and sampling event was 0.01 feet at MW-2 and 0.02 feet at MW-16. The tables for the other wells were marked with NA. 9/14/12 - Raphael Ketani. Next, I reviewed the July 1 through July 31 OM&M Status Report. The report contained only gauging and product collection data. About 31 gallons of product were collected during this period. Gauging took place during 7/18 and 7/19. MW-16 had 0.02 feet of product on 7/18/12. No other wells had product. Product was not seen in the wells while the pumping system was sitting idle. AKRF recommended not pumping from MW-7 and cycling the pumping at MW-1. I drafted a response letter to Mr. Martinelli of 34 Berry Street, LLC approving the May to June 2012 report and the July 2012 report. I also approved stopping pumping at MW-7 and cycling pumping at MW-1. The letter was submitted to Mr. Hussein for his approval. 9/18/12 - Raphael Ketani. Today I received the STIP with the signature of Mr. Sieman, Executive Vice President of 34 Berry Street, LLC. I forwarded the STIP to our legal division in Region 2. 9/19/12 - Raphael Ketani. Mr. Hussein approved the response letter regarding the approval of the May 1 to June 30 and July 1 to July 31 OM&M reports, stopping the pumping from MW-7 and cycling MW-1. The letter was sent out today. 9/27/12 - Raphael Ketani. Today I received a pdf containing the executed STIP with a date of 9/24/12. 10/16/12 - Raphael Ketani. I reviewed the AKRF September 2012 OM&M Status Report dated October 10, 2012. The NAPL monitoring well array consists of MW-1 to MW-3, MW-6, MW-7 and MW-16. About 12 gallons of product was recovered during this period. Gauging took place on September 13 and 14. Product was encountered only in MW-7 at a thickness of 0.01 feet on 9/14/12. NAPL was not present in any wells during August and not in any other wells during September. Groundwater samples were collected from MW-3 to MW-6 and MW-16 on 9/14/12. The only significant analyte hits were 13,000 ppb of 1,2-dichloroethane and 590 ppb of 1,2-dichloropropane

MAP FINDINGS

PARKING LOT (Continued)

S108469795

in a sample from MW-4. There were two centers of low groundwater elevation on site. One at MW-16 and one at MW-1. AKRF recommended leaving the pump in MW-7 off during October. I drafted a letter for the review of Mr. Hussein. In the letter, I stated that the Department was approving the September 2012 report and the decision to leave the pump in MW-7 off during October. 10/17/12 - Raphael Ketani. The letter was approved by Mr. Hussein and was sent out. 11/12/12 - Raphael Ketani. Today I received and reviewed the AKRF October 2012 OM&M Status Report dated 11/10/12. The NAPL monitoring well array consists of MW-1 to MW-3, MW-6, MW-7 and MW-16. Well MW-7 was left off from 10/1 to 10/3 and from 10/25 to 10/31. About 16 gallons of product was recovered during this period. Gauging took place on October 25 and October 26. I spoke to Mr. Zieroff regarding which wells were producing NAPL. He said that there is no measurable product, but the system does skim off the oil slowly. So, after some time, a number of gallons are collected. I approved the report without comment. 12/6/12 - Raphael Ketani. Mr. Cole sent me two documents. Both were sent today. One was a Notice of Satisfaction letter dated 12/6/12 which stated that OER was telling the owner they can go ahead and apply for the Certificate of Occupancy. The other was a one page document which served as proof of E-filing of NOS. 12/10/12 - Raphael Ketani. I received the November 2012 OM&M Status Report dated 12/10/12. The NAPL monitoring well array consists of MW-1 to MW-3, MW-6, MW-7 and MW-16. Gauging took place on November 28 and 29 for the wells in the monitoring array. NAPL was not seen in any on or off site wells. Well MW-1 was cycled on and off during this period. Well MW-7 was restarted in order to see whether it should be shut off permanently. The recovery system was down briefly on 11/6, 11/12 to 11/16 for maintenance and on 11/28 briefly. About 16 gallons of product was recovered during this period. A simple e-mail was sent approving the November 2012 report. 1/10/2013 - Raphael Ketani. I reviewed the AKRF December 2012 OM&M Status Report. Recovery wells MW-2, 3, 6 and 16 operated during this period. Shutdowns took place on December 15, 17, 19 and 20 for repairs, restarting MW-1 and for monitoring. Groundwater samples were collected from MW-1 to MW-7 and MW-16. The groundwater results for the samples were almost entirely either non-detect, just below the TOGS standards, or just above the TOGS standards. The exceptions were MW-1, MW-2 and MW-4 where the concentrations of 1,2-dichloroethane ranged from 110 ppb to 11,000 ppb, respectively. The sample from MW-4 also had 690 ppb of dichloropropane and MW-3 had 150 ppb of benzene. PCE and TCE are present up to 86 ppb in samples from wells MW-1, MW-2 and MW-4. Product did not occur in any of the wells, but 9.5 gals of product were collected during this period. While the concentrations of 1,2-dichloroethane and 1,2-dichloropropane in the sample from MW-4 are very high, they have been reducing for many months and are much lower than when monthly sampling had begun. I approved the report by e-mail. 1/24/13 - Raphael Ketani. Mr. Godick called. The next quarterly sampling event, for all of the wells that were installed on site and off site, is March 2013. 2/11/13 - Raphael Ketani. I reviewed the AKRF January 2013 OM&M Status Report. Recovery wells MW-1, 2, 6 and 16 operated during this period. Recovery system shutdowns took place on December 8, 28 and 29 for repairs. NAPL was not observed in any on site or off site wells. However, NAPL collection was estimated at 1/4 gallon per day during January. Approximately 7 gallons of NAPL were recovered during January. 3/14/13 - Raphael Ketani. I reviewed the AKRF February 2013 OM&M Status Report. Recovery wells MW-1, 2, 3,

PARKING LOT (Continued)

S108469795

6 and 16 operated during this period. They pumped at 2 gpm. Recovery well MW-3 pumped at 5 gpm. Wells 2, 3, 6 and 16 were used to recover the bulk of the liquids. The recovery system was shutdown for 11 days for repairs. NAPL was not observed in any on site or off site wells. Approximately 9.5 gallons of NAPL were recovered during February. Later, I was sent and reviewed a Supplemental Investigation Plan. Mr. Zieroff of AKRF explained in the e-mail that the purpose of the investigation is to supplement the findings of the Off-Site Investigation Work Plan, dated February 2010. The proposed investigation will evaluate groundwater conditions along both the eastern and the southern boundaries of the site in an effort to determine whether off-site background conditions are affecting groundwater quality at the site. Chlorinated solvents were previously found in the groundwater samples. The owner agreed to review adjacent property uses to the south and southeast to see if additional monitoring wells would be needed to assess the potential for an off-site source of the chlorinated compounds detected in the groundwater. The neighboring properties of concern are a dry cleaner at 44 Berry Street, 107-117 North 11th Street and 55 Berry Street (transformer spill, and ASTs and USTs), and 119 North 11th Street (large hazardous waste generator, 2,000 gal. UST, former paint factory and stamping company). Wells MW-17 to MW-19 will be installed to the south of the site along North 11th Street and Berry Street in order to assist with determining whether any of the aforementioned properties are impacting the site. 3/15/13 - Raphael Ketani. I approved the Supplemental Work Plan in a response e-mail. I also attached a letter requesting that the wells be installed in the sidewalks of North 11th Street and Berry Street. 3/20/13 - Raphael Ketani. Mr. Zieroff (914) 922-2382/(917) 583-4924 sent me the following e-mail: March: complete typical monthly well gauging events and reporting, and install and develop three additional monitoring wells. April: Complete well gauging and quarterly groundwater sampling event at the end of April, which will allow for sufficient time after new well installation/well development for sampling of all wells together during a single sampling event. 4/10/13 - Raphael Ketani. I reviewed the AKRF March 2013 OM&M Status Report. Recovery wells MW-2, 3, 6 and 16 operated during this period. Shutdowns took place on March 1 to 12, 15, 18 to 21 and 26 to 31 for major rewiring repairs, and for the replacement of broken piping, a fuse and meters. About 5 gals. of NAPL were recovered during the approximately 8 days that the system was operational during March. Gauging took place during March 20 and 21. No product was seen in any of the on or off site wells. By agreement, MW-7 is permanently shut down. Mr. Zieroff also stated in his e-mail today that the additional soil boring/well installation program is moving forward as planned. I approved the report by e-mail. 5/1/13 - Raphael Ketani. Mr. Zieroff sent me the following e-mail today: As a follow up to our conversation, here is a summary of what was discussed. - MW's have been installed in accordance with the 2013 Off-Site Investigation Work Plan- Due to dense network of underground utilities, additional safety measures were needed for clearance and the well installation/well development was completed the week of April 22-26. - A standard gauging event was completed in April to fulfill the monitoring requirements.- The first groundwater sampling event of 2013, which will include all existing and newly installed wells, will be completed during the May monitoring visit.- The schedule for the remaining quarterly sampling events will be staggered, as follows, to put us back on schedule: 2013 GW Sampling

Schedule May 2013 - First sampling event July 2013 - Second sampling event September 2013 - Third event December 2013 - Fourth event In addition, Mr. Zieroff (914) 922-2382/(917) 583-4924 told me that the next groundwater sampling event will be May 13 to 15. All 19 wells will be sampled (both old and new). 5/14/13 - Raphael Ketani. I reviewed the AKRF April 2013 OM&M Status Report for the period April 1 to 30. Recovery wells MW-1, 2, 3, 6 and 16 operated during this period. Shutdowns took place for a total of several days for MW-1 in order to make repairs and replace equipment. MW-1 ran from April 1 to 11 and from April 24 to 28. About 6 gals. of NAPL were recovered during April. Gauging took place during 2 events in April. Product was seen only in MW-1, 2 and 6. The product thickness varied from 0.03 to 0.12 feet. MW-17, 18 and 19 were not included in the monitoring as they had been installed at the end of April. However, they will be included in the May 2013 groundwater sampling event. WHILE DOING SOIL BORINGS FOUND CONTAMINATED SOIL

Tank Info:

Tank Number: 001
Tank Id: 65054
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

F00 - Pipe External Protection - None
I04 - Overfill - Product Level Gauge (A/G)
K01 - Spill Prevention - Catch Basin
A00 - Tank Internal Protection - None
D01 - Pipe Type - Steel/Carbon Steel/Iron
J02 - Dispenser - Suction Dispenser
L09 - Piping Leak Detection - Exempt Suction Piping
B00 - Tank External Protection - None
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
H00 - Tank Leak Detection - None
G00 - Tank Secondary Containment - None

Tank Location: 1
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 10/22/1998
Capacity Gallons: 2000
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True

DEC Memo: Site is being excavated under an "E" designation with the city because of lead contamination. One of the dump trucks hit a pylon and ruptured a diesel saddle tank. Area was soil, but was contained as best they could. ABC Pumped out the puddles & scraped up the contaminated soils. The area is being excavated and end point samples will be taken. Kevin Brussee will forward a spill closure report to DEC within the next couple of weeks.
Remarks: A dump truck drove over a obstacle puncturing its fuel tank spilling its fuel onto the soil. A vac truck is enroute, and soil will be removed at a later date.

NEW APT BLDG/FORMER PAINT FACTORY (Continued)

S110308967

leaking dewatering system that is used to dewater a site where an apartment building is being constructed at the location of a former paint factory. Celeste indicated he received calls from concerned neighbors who knew the industrial nature of the site and were concerned about the discharge effluent impacting the sewer system. Oloke noted that no sheen or petroleum odors were associated with the leaking effluent and that DEP Hazmat was formerly onsite. Oloke also indicated that site did have a NYCDEP discharge permit. Oloke indicated that site owner was listed at 95 Bedford LLC. Contact information on site fence is: NGI Construction 718-782-4624. Vought googled site address and noted "blogs" of concerned neighbors regarding possible contamination issues at the site and also noted that the Site is a listed EPA RCRA Site. Contact as per EPA database is Sheya Ruttner (Ph: 718-782-4624). 5/17/10 - Vought - As per DEC Zhune, she spoke with NYCDEP Oloke who returned to site on night of 5/14 and discharge pipe was repaired. Spill closed by Vought as non-petroleum spill and repair of leaking dewatering discharge line. Vought noted that site was E designated and called NYCDEP Dan Cole (Ph: 212-341-0964) who noted that he was case manager on site and that site was heavily contaminated with metals and SVOCs. Cole noted that majority of contaminated soil removed from site and that letter was sent to NYCDEP Nagi dated 4/8/08 notifying him of excessive metal concentrations and requiring further guidance. As per Cole he received call from former DEC Chawla noting that if Cole wished to list site as Hazardous Waste site then he should do so. Cole noted that prior soil concentrations of metals onsite were up to 5400ppm arsenic and very high lead levels. Cole also noted that case was being managed by Environmental Business Consultants (Charlie Sosik 631-504-6000). DEC Austin called and left message for DEC BSHM Paul John to return call. DEC possibly requires: 1) referral to DEC Remediation or RCRA Unit 2) followup and possible closure of spill 08084633) possible report submission by EBC Sosik 4) Discussion with DEC nag.

Remarks:

UNKNOWN CHEMICAL LIQUID LEAKING FROM TWO RED TANKS ON A CONSTRUCTION SITE, POSSIBLY FLOWING INTO STORM DRAINS.

DEC Memo: Sangesland spoke to Dave Wagner at the oil company. He said there was a leak in the fill line (in the basement) between the foundation wall and the tank. Approx 2 gal of oil spilled onto the cement basement floor. No on going leak (problem only during fill). Leak has been cleaned. Owner has hired oil company to repair the piping before next delivery.

Assessment Corporation provided notarized documentation that the tank was properly removed from the site on July 13, 2001. On November 24, 2003, NYSDEC was provided documentation of two Non-hazardous Material Manifests for the disposal of petroleum-contaminated soil dated July 13, 2005. Also, on November 24, 2003, NYSDEC was provided documentation of six soil sample analyses from the sides of the tank pit and the bottom of the pit, dated July 3, 2001. The samples were analyzed for STARS 8021 and 8270 and are acceptable for closing (per TAGM 4046) Spill No. 0103335.

 DEC Memo:

Tank test failure. PBS file shows tank in service, but next tank tes due prior to the date of this spill. PBS registration expired in 2000. Need to follow up.9/22/06 left message for attorney found on deed to contact Williamsburgh Square LLC (new owner as of 2003). address:154 N. 7th St., Brooklyn 11211. deed had no individual's name (only corporation). bf4/30/08 Sent Old TTF letter to:Jerry LebedowiczWilliamsburg Square LLC52-47 Browvale LaneLittle Neck, NY 11362Address obtained from tank closure application. bf5/2/08 Received message from J. Lebedowitz to call him back. bf5/5/089 Received call from J. Lebedowitz tank was closed. Athena Environmental sampled after tank was removed. bf6/18/08 Yesterday, recieved message from Spiro of (Name not clear) Environmental Services. He requested call back to (718)784-7490. I called the number today, but number is not in service at this time and no further informatuion is available. Review of PBS file shows tank was closed in 2008. They should have closure report. Called Jerry Lebedowicz and left message to call me back. His number (from PBS application) is (718)784-7490. Mr. lebedowicz hand-delivered sampling results from Athenica Environmental Services. One contaminant was above soil clean-up objectives to protect gw quality: chrysene (690

DEC Memo: Property is being sold. Purchaser hired a firm to do a phase 2 and found contaminated soil under a crack in the cement floor. This location used to have an oil tank standing above it. Eastern Environmental has been hired by the current owner. They have opened the floor and will have a "guzzler" truck suck out contaminated soil. In the next few days they "HOPE" to hit clean endpoints and send samples in to confirm cleanup is complete. If they do not get clean

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
Spill Date: 7/15/1999
Spill Number/Closed Date: 9906462 / 4/2/2012
Spill Cause: Unknown
Spill Class: Known release that creates potential for fire or hazard. DEC Response. Unable/unwilling Responsible Party. Corrective action taken. (ISR)
SWIS: 2401
Investigator: HRPATEL
Referred To: Not reported
Reported to Dept: 8/31/1999
CID: 252
Water Affected: Not reported
Spill Source: Commercial/Industrial
Spill Notifier: Other
Cleanup Ceased: Not reported
Cleanup Meets Std: False
Last Inspection: Not reported
Recommended Penalty: False
UST Trust: False
Remediation Phase: 0
Date Entered In Computer: 8/31/1999
Spill Record Last Update: 4/2/2012
Spiller Name: UNKNOWN
Spiller Company: UNKNOWN

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL"9/3/99 - Environmental firm was hired by company which is buying the on site company and leasing the land.Environmental firm did a phase 1 & phase 2 assessment with several wells and borings. Found floating product and contamination. SS told them to delineate the site, submit a profile of what is there now and a proposal of what will be done to clean it up. They asked about DEC going after a former owner, SS said no, DEC holds present owner responsible.Envir. firm will submit such a report "soon"2/18/2000 Sangesland called Mr. Pradhan at Malcolm Pirmie (614-888-4953). Left a voice mail to ask whatever happened to the report DEC asked for in Sept.99Report should include:1) Delineate the site2) Outline what is on the property now and what will be built3) Identify how the product will be remediated. ALSO SEE SPILL # 00033904/12/04-Vought-Spill transferred from Sangesland to Rommel as per Rommel.1/11/2006 - Haggerty - Malcolm Pirmie did Phase I,II site assessments to determine if this property was a candidate for development. After discovering free-floating product on groundwater, the decision was made not to develop this property. As far as I know, no additional investigation or remediation was done on site. I have made every attempt to locate responsible party with no luckI am requesting a site visitAlternate addresses 70-72 Wythe Ave 91-101 N 12 St 82 N 13 St 58 Wythe Ave 92 N 13 St I believe this property is located at the intersection of North 13th and Wythe AveRegion 2 rep visited the site, but could not get inside to inspect.Site is rented to "Nations Rent" - Oscar Parker salesman - 718-387-4872Posted sign showed two different property managers:Segal Realty Group LLC 718-388-9000M.C. O'Brien Inc. 718-252-9191Albany review (above) - jcgrathw1/29/07 - Austin -

Transferred from Albany assignment to Patel in R-2 office for further work - end03/09/07-Hiralkumar Patel. left message for Bill Blaker (718-387-4872), tenant (Nations Rent) at site.03/14/07-Hiralkumar Patel. spoke with Mr. Blaker. he gave Mr. Prigozen's number (718-366-7930). spoke with Sage Prigozen. he will ask his father, who is owner of property, to call.received message from Mr. Prigozen (Cell: 917-750-4112), property owner.03/16/07-Hiralkumar Patel. spoke with Mr. Prigozen, property owner. currently he is living in Florida. as per him, they found this contamination during tank removal and has all paperwork in storage in NY. he will submit these paper once he comes to NY in June 07.Elliot Prigozen3400 Pen American DriveMiami, Florida 33133Ph. (917) 750-4112 (C)Fax (305) 860-6699email: elliotp@bobcatzone.com06/14/07-Hiralkumar Patel. tried cell number for Elliot, but no success. left message for Elliot's son.06/15/07-Hiralkumar Patel. left message for Elliot's son.06/18/07-Hiralkumar Patel. received call from Elliot Prigozen. he searched for records and found some reports on tank removals. asked him to send copy of those reports. Mr. Prigozen will be back in city after 10 days and will send copies at that time.PBS #: 2-091030. as per PBS record, site had following tanks:1. two 1,500 gal Lube Oil UST, closed and removed in July 20002. one 1,500 gal gasoline UST, closed and removed in July 20003. four 550 gal diesel USTs, closed and removed in Dec. 19984. one 1,000 gal diesel AST, closed and removed in Apr. 20025. one 550 gal gasoline UST, closed-in-place in June 19896. one 550 gal diesel UST, closed-in-place7. one 1,100 gal gasoline UST, closed-in-place8total 11 tanks were on-site.sent letter to Mr. Prigozen requiring Phase I, soil and groundwater delineation. letter emailed to Mr. Prigozen.07/02/07-Hiralkumar Patel. received message from Mr. Prigozen. left message for Sage Prigozen as Elliot's number was busy.07/05/07-Hiralkumar Patel. received copy of three reports from Mr. Prigozen. 1. addendum to tank closure report (don't have original tank closure report) for four 550 gal USTs2. geoprobe investigation report for soil investigation in area of previously removed four 550 gal USTs (four 550 gal USTs were located in parking lot along Kent Avenue)3. closure report for four 1500 gal tanks, which were located near main entrance (on north side) along north 12th street, and were removed in June 2000. addendum to four 550 gal USTs closure includes a further review of sample analyticals for samples taken after tanks removed in Aug. 1998. during tank removal found heavy SVOC contamination in three endpoint samples out of four samples.geoprobe investigation in area of previously removed 550 gal USTs was done as found heavy SVOC contamination during endpoint analysis. abstract:- report prepared on Oct. 7, 1998- four borings were installed (one on each side of excavation area of previous 550 gal UST location)- three soil samples from the smear zone at approx. 7 ft bg, were chosen for analysis: S-1 (southeast of excavation), S-3 (northwest of excavation) and S-4 (northeast of excavation)- all three samples were analyzed for SVOCs only (as didn't find VOCs in previous sampling)- few SVOC contamination found in sample S-3 (which is along Kent ave)abstract of tank closure report for 1500 gal tanks:- removed four 1500 gal single wall, concrete-encased USTs.- from regional water table maps, groundwater occurs approx. 15 ft bg and flows in a northwesterly direction- tanks were located approx. 4 ft bg- tanks were in good condition with no corrosion. no visible holes or leaks were noted- sidewall samples were collected at 8 ft and bottom sample was collected at 12 ft bg- groundwater was not encountered at the site during excavation- approx. 79.16 tons of

S104621824

contaminated soil were removed- highest PID observed in west side wall sample (PID: 398.3 ppm)- due to observed staining, odors and documented PID readings, the DEC was notified (spill #: 0003390)- minor contamination found in soil endpoint samplespoke with Mr. Prigozen. explained him that spill was reported as found free product on groundwater during environmental investigation in 1999. and during tank removal activities, no groundwater sample was taken. asked him to delineate groundwater contamination. asked him to install monitoring wells atleast to previous tanks locations (one along kent ave and one along north 12th street). sent email to Mr. Prigozen with specific requirement of monitoring well locations.07/09/07-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he removed four 550 gal tanks from his site, which were located along Kent Avenuen and based on closure report addendum, there was no soil contamination. and he believes that groundwater contamination, found in 1999, came from Texaco oil terminal along Kent Avenue. asked Mr. Prigozen to look for investigation report from Aug. 1999, based on which this case was reported. if monitoring wells, during that investigation, were installed along kent ave and found contaminated then based on groundwater flow direction data (if available in report), the department can ask upgradient property to do investigation, but if no site specific groundwater flow direction or previous monitoring well location available to the Deparment, then the department requires him to do groundwater delineation with site-specific groundwater flow direction. Mr. Prigozen will look for report.07/09/07- Sangesland received a call from an Environmental consultant in Charlotte, North Carolina. He asked if the DEC required work to be done by a licenced New York State Prof. Engineer. Sangesland said no. The only requirement is the lab used for testing must be NYS Licenced and if any material is removed from the site it must be taken by a licenced hauler.07/13/07-Hiralkumar Patel. received limited Phase II report from Mr. Prigozen. abstract:- an affidavit dated 06/13/1989 indicates that one 550 gal gasoline tank was purged and filled with concrete slurry in the sourthern portion of the site- two soil borings and nine monitoring wells were installed- highest PID reading found in boring BK-6 (595 ppm) at 5 to 7 ft bg <----- groundwater sample was not obtained from boring location BK-6, which was installed closed to sediment trap area <----- based on site topography and nearby waterways, it is determined that the nearby groundwater flow direction is to the northwest- free product was measured in two monitoring wells (MW-10 with 1.5 inch and MW-7 with 0.05 inch of free product) <----- minor tetracholorethane was found in (assumed) upgradient groundwater samples (BK-1, BK-2 and BK-3)- MTBE contamination (236 ppb) found in groundwater samples MW-2 and MW-3 (area near abandoned gasoline tank)- highest contamination found in soil sample at BK-6 (near old sediment trap)-----Xylene----BenzeneBK-6 (1-3 ft)-----8,730----2,025BK-6 (3-5 ft)-----3,320-----327//during Phase II, borings were installed to maximum depth of 17.5 ft bg, but report doesn't mentioned about groundwater depth.// 07/18/07-Hiralkumar Patel. after reviewing available reports found following:- no groundwater depth information- free product in wells MW-7 and MW-10 along Kent Avneue, but no groundwater flow direction- MTBE contamination in groundwater sample at BK3, which is close to previously abandoned gasoline tank location- benzene and xylene contamination in sample at BK-6, which is close to sediment trap. no

S104621824

groundwater sample taken from there. spoke with Mr. Prigozen. based on available data, asked Mr. Prigozen to do following:- soil and groundwater sampling at previous sampling location BK-6 (as found Benzene and Xylene in soil and had highest PID during Phase II investigation)- soil and groundwater sampling at previous sampling location BK-3, close to previously abandoned gasoline UST (as found MTBE in gw)- complete groundwater delineation (with atleast three permanent monitoring wells and site specific groundwater flow direction) in area of previous boring locations MW-7 and MW-10. asked Mr. Prigozen to check any previous wells exists on site. if not then he needs to install new wells. based on available data and reports, asked Mr. Prigozen to disregard requirement of Phase I investigation, as mentioned in letter dated June 18, 2007. 07/19/07-Hiralkumar Patel. sent letter to Mr. Prigozen requiring soil/groundwater sampling at previous boring locations BK-3 and BK-6 and complete groundwater delineation in area of previous boring locations BK-7 and BK-10. letter emailed to Mr. Prigozen with map (from former phase II report) indicating locations where the Department requires further investigation. 09/06/07-Hiralkumar Patel. received email from Mr. Prigozen. he is contacting companies for price quote. 09/13/07-Hiralkumar Patel. left message for Mr. Prigozen. received call from Mr. Prigozen. he is reviewing quotes from companies and will finalize next week. he will send company's name next week with scheduling and estimated date for report submission. 09/20/07-Hiralkumar Patel. received email from Mr. Prigozen. he has hired Hart & Hickman to do the investigative work. they will be on site in two to three weeks. Theron GrimHart & Hickman, PCPh. (704) 586-0007Mr. Prigozen will call once get dates finalized for investigation work. 09/28/07-Hiralkumar Patel. received email from Mr. Prigozen. contractor will start work on Oct. 8th, 2007. 10/23/07-Hiralkumar Patel. received call from Mr. Grim. he just received analytical data from lab and they found contamination and free product in groundwater. Mr. Grim will submit report within two weeks. asked Mr. Grim to send analytical data, groundwater flow direction and site map with sampling locations for review. he will send these tomorrow. 10/26/07-Hiralkumar Patel. received analytical data for few samples and site map. found soil and groundwater contamination in area of former sediment trap. waiting for full report. 11/06/07-Hiralkumar Patel. spoke with Mat Ingalls Hart & Hickman, PC. Mr. Grim is no longer working there. Mat is sending report to Mr. Prigozen to review and approval and once gets approval, he will forward report. Mat IngallsPh. (704) 887-4617 email: mingalls@harthickman.com 11/15/07-Hiralkumar Patel. received report from Mr. Ingalls. abstract:- installed four soil borings (BK-3A, BK-6A, BK-7A and BK-10A); three soil samples (BK-3A, BK-7A and BK-10A) were advanced to depth of 5 ft below grade adjacent to existing wells and boring BK-6A was installed adjacent to the northwest corner of the sediment trap and was advanced to depth of 12 ft bg (later converted to temporary well)- installed one temporary well (BK-6A)- found high PID in BK-6A (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth)- sampled recently installed temporary well and two existing wells (BK-3 and BK-7)- depth to groundwater at the site ranges from approx. 5 ft bg in the northern portion of the site to 10 ft bg in the southern portion of the site- map indicates shallow groundwater generally flows to the southwest <----- during static water level measurements, 2.37 ft of free product was measured in monitoring well BK-10 <----- directly

S104621824

tanks on-site, but oil in BK-10 could be coming from off-site. spoke with Matt. he mentioned that they did not find well BK-4 during Phase II investigation, but found during recent well survey. found free product in well and took sample and it is on hold, in lab. asked Matt to analyze sample from BK-4. also asked him to monitor and remove product from existing wells on-site. discussed with DEC Austin. as owner suspecting off-site spill that impacting well BK-10 at his property, Austin asked to pump out product, weekly for a month to see if any more product comes to the site and then based on product recovery data, may require further work by site owner. sent email to Matt and Mr. Prigozen requiring analysis of sample from BK-4 and monitoring and product removal from existing wells on weekly basis. 12/24/07-Hiralkumar Patel. spoke with DEC Leszek, who is handling project at Bayside Oil. he confirmed that there was no product found in two monitoring wells (MW-4 & MW-12) located along Kent ave, near 91 N 12th street site. 01/08/08-Hiralkumar Patel. spoke with Matt. he submitted proposal for product removal but haven't heard back. spoke with Mr. Prigozen. he hasn't hire anyone to remove product. asked Mr. Prigozen to remove product from wells on his property and also explained him to install well upgradient from well # 10, on sidewalk, to prove any off-site migration. 01/15/08-Hiralkumar Patel. spoke with Mr. Prigozen. he has authorized Matt to pump product out. asked him to schedule upgradient well installation on sidewalk along kent ave. he is waiting for proposal from Matt. left message for Matt to submit analyticals for sample taken from well # 4. also asked to submit schedule for product removal and to plan for upgradient (from well # 10) well installation. 01/17/08-Hiralkumar Patel. received message from Matt. left message for Matt. received analyticals for sample from well BK-4. during fingerprint analysis, found product from well BK-4 in range from degraded gasoline or similar material to diesel or fuel oil. well BK-4 is installed in area of previous 1500 gal USTs. 01/24/08-Hiralkumar Patel. received call from Matt. they are removing product from BK-4 and BK-10. asked them to continue removing product from these wells for about a month and then based on remaining product, the department may require downgradient well from BK-4 and upgradient well from BK-10. Matt will send report. 03/20/08-Hiralkumar Patel. left message for Mr. Ingalls to submit product recovery data. sent email to Mr. Ingalls and Mr. Prigozen to submit product recovery data by end of 03/28/08. 03/24/08-Hiralkumar Patel. received message from Mr. Ingalls. they finished field work and will submit report, once get Mr. Prigozen reviews it. 03/27/08-Hiralkumar Patel. received report from Mr. Ingalls. abstract:- fingerprint result indicate that the product observed in BK-4 is a mix of low boiling material such as petroleum solvent or degraded gasoline, and a middle distillate such as diesel fuel or fuel oil that has undergone extensive biological degradation. apparent product thickness (in feet) in BK-4 and BK-10:-----01/21/08-----02/06/08-----02/14/08-----02/21/08 BK-04-----0.53-----0.21-----0.29-----0.34 BK-10-----2.55-----0.76-----0.56-----0.91 04/25/08-Hiralkumar Patel. left message from Mr. Ingalls to continue product recovery from both wells until finds clean groundwater. based on recent product recovery report, product thickness in wells BK-04 and BK-10 has been reduced. but closest well to well BK-10 is BK-07 which is 50 ft away and crossgradient and next downgradient well from BK-10 is BK-06A which is 250 ft away and has

MAP FINDINGS

SYLVAN EQUIPMENT (Continued)

S104621824

groundwater contaminated. also closest well to BK-04 is BK-06A which is about 40 ft away and crossgradient and there are no downgradient well from BK-04. discussed with DEC Austin. as product thickness in both wells reduced, Austin believes that this could be localized problem. Austin asked for complete horizontal delineation of groundwater contamination around BK-04, BK-10 and BK-06A. Austin asked to call owner regarding continuous recovery of product and about further groundwater investigation work.spoke with Mr. Prigozen. asked him to continue product recovery from both wells. also mentioned to him regarding further groundwater delineation. Mr. Prigozen still believes that product in both wells coming from off-site.sent letter to Mr. Prigozen requiring removal of product from existing wells and further soil/groundwater delineation around wells BK-04 and BK-10 and previous boring location BK-06A. letter emailed to Mr. Prigozen and Mr. Ingalls.04/30/08-Hiralkumar Patel. received call from Mr. Ingalls. they still believes that product in BK-10 is coming from off-site. they are planning to install well on sidewalk to see any off-site migration. Mr. Ingalls asked for number of wells around BK-10 and BK-04. mentioned to Mr. Ingalls that the department requires complete delineation which may require multiple wells on-site as well as off-site. asked him to install one permanent well at previous boring location BK-06 as found contaminated groundwater in previous investigation and BK-06 is cross gradient from BK-04.06/04/08-Hiralkumar Patel. left message for Mr. Ingalls. spoke with Mr. Prigozen. they are currently removing oil from wells and will install required well in two weeks.07/08/08-Hiralkumar Patel. spoke with Mr. Ingalls. they are removing oil from wells on weekly basis but haven't heard from owner regarding further well installation. spoke with Mr. Prigozen. he was out for work and just came back. he will talk to Mr. Ingalls regarding further well installation and will submit schedule by end of 07/18/08.08/25/08-Hiralkumar Patel. left message for Mr. Prigozen.09/19/08-Hiralkumar Patel. spoke with Mr. Ingalls. he mentioned that he tried few times but no response from Mr. Prigozen. left message for Mr. Prigozen.09/22/08-Hiralkumar Patel. received call from Mr. Prigozen. he mentioned that he was out of country and will contact Mr. Ingalls. will install wells in early october. Mr. Prigozen will ask Mr. Ingalls to call with work schedules.12/01/08-Hiralkumar Patel. left message for Mr. Ingalls.spoke with Mr. Prigozen. he will call back as was busy.12/02/08-Hiralkumar Patel. received message from Mr. Prigozen. left message for Mr. Prigozen.12/03/08-Hiralkumar Patel. received call from Mr. Ingalls. they are still waiting for authorization for required work.received call from Mr. Prigozen. he mentioned that he has gave authorization long time back. asked Mr. Prigozen to contact Mr. Ingalls to solve this confusion and asked to call back with work schedule.received call from Mr. Ingalls. he spoke with Mr. Prigozen and Mr. Prigozen asked him to start work after New Year holiday. mentioned to Mr. Ingalls that required report is overdue since June 2008 and the department can't approve any more extension. he will contact Mr. Prigozen and will call back.12/04/08-Hiralkumar Patel. received call from Mr. Ingalls. he got approval from Mr. Prigozen for additional work. he spoke with drilling company and can start work from 12/22/08. approves it and asked Mr. Ingalls to submit proposed well location map alongwith existing well locations.sent email to Mr. Ingalls to submit proposed well location map, by end of 12/09/08, including locations of previous borings and wells. email copied to

Mr. Prigozen.12/05/08-Hiralkumar Patel. received email from Ed from Hart & Hickman with proposed well location. they are proposing to install three wells: one upgradient from BK-10 (along property boundry along Kent ave), one downgradient from BK-04 (along N. 12th street) and one downgradient from previous boring BK-06 (across sediment trap which might be route for groundwater contamination.)Edward H. StephensHart & Hickman, PCPh. (704) 586-0007 (704) 887-4609Fax (704) 586-0373email: EStephens@harthickman.comsent email to Ed and Mr. Prigozen approving proposed well locations. email copied to Mr. Ingalls. required investigation report submission by the end of Jan. 26, 2009 and weekly submission of well monitoring/product recovery data.12/09/08-Hiralkumar Patel. received call from Ed from Hart & Hickman. he asked about location of well BK-14. he proposed to install well downgradient from sediment trap instead of at BK-14. mentioned to Ed that the Department wants well at (suspect) source location (which is sediment trap) to capture mostly contaminated material and based on findings, more wells needs to be installed.12/15/08-Hiralkumar Patel. spoke with Ed at Hart & Hickman. they have scheduled well installation on 12/29/08.01/06/09-Hiralkumar Patel. received email from Ed. they installed four monitoring wells on 12/30/08 and will submit report once gets sample analyticals.02/04/09-Hiralkumar Patel. received email from Ed with site map including results of recent groundwater investigation. four more wells (or borings) were installed. well/boring BK-12 installed upgradient from BK-10. no contamination found in BK-12. well/boring BK-14 installed near previous sediment trap and found contaminated groundwater. well/boring BK-13 installed on southwest side of BK-14, where no contamination found. well/boring BK-15 was installed on northwest of BK-4 and found contaminated groundwater. groundwater analyticals:

-----BK-14-----BK-15Benzene-----1,
060Ethylbenzene-----468Xylene-----204Naphthalene--

-----738-----1,04002/11/09-Hiralkumar Patel. received call from Ed. he mentioned that during recent survey, they found groundwater flowing in southeast towards northwest portion of the site (near intersection of Kent ave and N. 13th street) and groundwater flowing in south direction towards southeast portion of the site (near intersection of N. 12th street and Wythe ave). according to recent groundwater flow direction, BK-13 is downgradient from BK-14, but cross gradient from BK-4. asked Ed for off-site investigation, downgradient from wells BK-15 and BK-4. also asked for weekly monitoring and recovery of free product. Ed will speak with Mr. Prigozen and will submit complete investigation report.02/12/09-Hiralkumar Patel. received additional Phase II report (analyticals recorded earlier). abstract:- four borings were advanced to depth of 15 ft bg- one soil sample, with highest PID, from each boring was sent for analysis- groundwater flows to the southeast in the western portion and to the south in eastern portion of the site- found 1.78 ft of free product in BK-10A- strong odor found during installation of wells BK-12 and BK-13- high PID readings were found during installation of BK-13 (276 ppm at 5 ft) and BK-14 (729 ppm at 6 ft)conclusions from Ed:- "free product was not observed in BK-12 (which is upgradient from BK-10) during the recent assessment, it is not common to observe a delay in free product recharge into newly installed monitoring well. BK-12 should be observed over time to confirm occurence of free product."- "based on local groundwater flow

direction and the absence of a potential on-site source in the vicinity of the observed free product at BK-10A, H&H believes the observed free product has migrated on-site from the upgradient Bayside Oil Depot."- "based upon the result of the receptor survey, soil and groundwater assessment, existing poor groundwater quality in the vicinity of the subject property, and a documented upgradient source of groundwater impacts including free product, soil and groundwater impacts at the site can be most effectively managed through LAND USE RESTRICTIONS AND STANDARD ENGINEERING CONTROLS."02/20/09-Hiralkumar Patel. spoke with Ed regarding conclusions in submitted report. mentioned to Ed that clean groundwater was found in upgradient well BK-12 which indicates no off-site source. Ed mentioned that they will go back to site to check well again as suspecting that newly installed well could recharge slowly.spoke with Mr. Prigozen. based on results of investigations till date, asked him to start weekly monitoring of all wells, and removal of any product, immediately. also asked him for off-site investigation downgradient from wells BK-4 and BK-15. told him that product must be removed from wells by next week (end of 02/28/09) and weekly there after.02/23/09-Hiralkumar Patel. spoke with Mr. Prigozen. will do product removal on 02/25/09.alternate addresses: 58 Wythe Ave, 91-101 N 12 St, 70-72 Wythe Ave, 82 N 13 St, 92 N 13 Stfound two old closed spill reports:1. 0003390:- consolidated with this spill2. 0207277:- surface spill reported02/25/09-Hiralkumar Patel. spoke with Mr. Prigozen. he has hired his mechanic guy to bail out product from wells. he mentioned that he got directions from Ed how to remove product and got some forms for recording. he also mentioned that they have waste oil tank on-site and they will collect product into this on-site tank and will pump out tank once get full. asked Mr. Prigozen to call once he reach to site tomorrow (02/26/09). Mr. Prigozen asked to send STIP at following address:Sylvan Holdings LLC. **property owner**c/o Sage Prigozen **Elliot's son**58-64A Maurice AvenueMaspeth, NY 11378Ph. (917) 750-4112 (C)Fax (305) 860-6699email: sagep@bobcatzone.com02/26/09-Hiralkumar Patel. received call from Mr. Prigozen. he has hired Tri-State environment for product removal (not local mechanic). will submit report. asked him to remove product weekly.02/27/09-Hiralkumar Patel. received call from Mr. Prigozen. he is planning to hire some local investigation team for further investigation. will call back with company's name who will do further investigations.sent STIP to Mr. Prigozen (7005 1820 0007 9827 6066). STIP emailed to Mr. Prigozen.03/13/09-Hiralkumar Patel. received call from Paul from Ecosystems. they have been hired by Mr. Prigozen. will submit work plan for additional investigation.Paul CiminelloEcosystems Strategies Inc.Ph. (845) 452-1658 (O) (914) 475-4208 (C)Email: paul@ecosystemsstrategies.com03/16/09-Hiralkumar Patel. received STIP delivery confirmation (letter delivered on 03/11/09).03/25/09-Hiralkumar Patel. received email from Ecosystems with work plan for further investigation. abstract:- will put absorbent pads in wells BK-4 and BK-10 as an interim remedial measure; pads will be changed, as needed, on a weekly basis- will verify groundwater flow direction- propose to install six to ten borings on site- borings will be extended (at a minimum) to the soil/groundwater interface or until refusal- at least two soil samples will be collected: one with highest PID and one at groundwater interface; if no PIDs found then only one soil sample will be collected at groundwater interface- convert one to two

S104621824

borings into a monitoring well- wells will be installed with a ten ft of screen; minimum of 2 ft of screening will extend above water table according to submitted site plan in proposed work plan, Ecosystems is planning to install all borings around BK-10, but no investigation proposed to delineate soil/groundwater contamination around BK-04. -----spoke with Mr. Prigozen. told him that without having signed Stipulation agreement, i can't approve any work plan. Mr. Prigozen mentioned that his attorney asked him not to sign STIP as he might lose right to get fund from brownfield program. Mr. Prigozen will ask his attorney to call. Mr. Prigozen has chosen to proceed with proposed plan without having approval from the department. spoke with Paul at Ecosystems. they are at the site today and are surveying all wells to confirm groundwater flow direction. they have put absorbent pads in wells and recovering free product. asked Paul about investigation around BK-04. he is currently concentrating on finding source for BK-10 and will eventually include investigation around BK-04. mentioned to him that the department requires investigation around BK-04 also and will only approve the work plan if it includes soil/gw investigation around BK-04 along with investigation around BK-10. 03/26/09-Hiralkumar Patel. received email from Larry Schnapf, environmental attorney representing Mr. Prigozen. Larry claims that contamination found in BK-10 is from an upgradient oil depot, so he advised his client not to sign STIP which results in waiver of rights to seek reimbursement from the spill fund. he mentioned that his client will sign STIP if oil spill fund waiver paragraph deleted from agreement. Larry Schnapf email: Lawrence.Schnapf@srz.com 04/01/09-Hiralkumar Patel. spoke with Paul at Ecosystems. groundwater flow direction found almost in same direction as found earlier. no product found in well upgradient from BK-10. 04/02/09-Hiralkumar Patel. received email from Paul with report. abstract:- groundwater flow measurements are broadly consistent with the findings of previous consultant- groundwater flowing towards the south- review of sanborn maps indicates that the western portion was associated with oil refining activities predominantly performed on the adjoining property to the west (towards bayside oil depot)- numerous tanks are shown on the site between 1887 and 1916- between 1905 and 1965 a tunnel, that appears to have contained pipes connecting both sites, extended beneath Kent ave ----- according to sanborn maps from 1887 to 1916, western portion of the site (in area of Bk-10) was occupied by an oil refining company and site had multiple tanks on western portion- adjoining to the southwest was MGP site from 1887 to 1916- 1942 sanborn map showing a tunnel beneath Kent ave between the subject site and western property (currently bayside oil depot) spoke with Mr. Schnapf. Mr. Schnapf mentioned that they are suspecting that old tunnel between two properties (current bayside oil depot and subject site) might be bringing contamination on his client's property. he is planning for more soil and groundwater investigation and investigation about a tunnel before signing STIP. discussed with DEC legal and legal division agreed with this. asked Mr. Schnapf to submit revised work plan for soil and groundwater investigation around BK-4 and BK-10 and tunnel investigation with time schedule. Mr. Schnapf will ask Paul to submit revised work plan by 04/06/09. spoke with Paul at Ecosystems. asked him for revised work plan. also asked him to submit site map with approx. locations of following:- BK-10, BK-4- previous tanks on the property (from 1887 to 1916)- adjoining MGP site- tunnel under Kent ave 04/06/09-Hiralkumar

Patel. sent email (at 3:30 PM) to Mr. Prigozen to submit revised work plan by 4 PM today. received revised work plan. abstract:- absorbent booms will be used in wells BK-04 and BK-10 as an interim remedial measures- will sample all wells- proposes to dig minimum of three test pits in area where tunnel was located- test pits will be extended to a maximum depth of 10 ft bg or until groundwater is reached- if contamination found in soil during test pit installation, samples will be collected and soil will be removed for off-site disposal- total of 8 to 12 soil borings will be extended across the site with 3 to 5 of these boring being completed as wells- borings will be extended (at a minimum) to the soil/groundwater interface- two soil samples will be collected from each borings: one at soil/groundwater interface and one at highest PID- will submit investigation report within 10 weeks of the approval
<-----04/07/09-Hiralkumar Patel. sent work plan approval letter to Mr. Prigozen. letter emailed to Mr. Prigozen, Paul and Mr. Schnapf.04/16/09-Hiralkumar Patel. received email from Richard Hooker from Ecosystems. will start investigation work at 8 AM on 04/23/09.05/06/09-Hiralkumar Patel. received email from Richard. they completed extension of test pits at the western property line and the sampling and laboratory analysis of all existing wells. will install on- and off-site monitoring wells and extension of soil boring on-site on 05/13/09.06/16/09-Hiralkumar Patel.4:58 PM:- received email from Paul. he just received comments on the draft report from client and will incorporate these changes. will submit report tomorrow.06/19/09-Hiralkumar Patel.3:21 PM:- received investigation summary report from Paul. abstract:- one test pit was installed immediately southeast of center point of western property line- eleven soil borings were installed: nine borings (B-1 through B-9) were installed in the vicinity of BK-4 and two borings (B-10 and B-11) were installed in the vicinity of BK-10- sampling was conducted at each boring location at five-ft intervals to a maximum depth of 20 ft bg or until refusal was reached- test pit documented the presence of a 10 inch diameter iron pipe in a brick-lined depression- broken end of pipe was found approx. 2.5 ft bg and the pipe was found to extend down to approx. 6 ft bg before turning sharply west beneath Kent Ave- water was encountered in test pit at approx. 4 ft bg and no evidence of contamination was encountered <----- field evidence of contamination was observed at the groundwater interface at most borings extended in the vicinity of BK-4 <----- no field evidence of contamination was encountered in the vicinity of BK-10 <----- soil borings B-1, B-9 and B-10 were completed as temporary monitoring wells MW-1, MW-2 and MW-3 respectively- screen interval from 2 ft above to 8 ft below static groundwater level- free product was noted in monitoring well MW-2 (B-9) and remains in BK-10- previously unknown well (MW-4) was discovered to the northeast of BK-10- found free product in BK-10: 4.7 inches of product on 03/25/09 and 4.2 inches of product on 05/13/09 <----- found 1.5 inch of free product in MW-2 <----- borings B-10 and B-11 were installed to the southwest and southeast of BK-10; soil samples from these borings at the groundwater interface found no contamination- boring B-10 was converted into well MW-3; sampled MW-3 and previously unknown well MW-4 (20 ft north of BK-10) and found no contamination- soil samples from borings collected in the area of BK-4 indicate significant, but uneven soil contamination immediately southeast of the repair shop; these results confirm the presence of an area of subsurface petroleum contamination beneath and southeast of the

will submit RAWP by 07/17/091:45 PM:- spoke with Mr. Prigozen. based

on results of further investigation, informed him that the department

requires stipulation agreement signed before reviewing or approving

any remediation action work plan. also asked him to schedule a site

visit. he agreed to meet at the site at 10 AM on 07/01/09.2:03 PM:-

received call from Paul. he spoke with Mr. Prigozen and will meet at

10 AM on 07/01/09.07/01/09-Hiralkumar Patel.10:00 AM:- visited site.

met Mr. Prigozen and Paul. repair shop nearby entrance along N. 12th

street consists three 275 gal ASTs: two for fresh oil and one for

waste oil. waste oil tank is not registered. asked Mr. Prigozen to

register waste oil tank. inspected areas around sediment trap/repair

shop, BK-10, old abandoned tunnel and previously abandoned gasoline

UST. Paul mentioned that abandoned tunnel extends towards BK-10. Paul

will submit RAP by 07/17/09. proposes to excavate area by repair shop

entrance as found heavily impacted soil in boring B7. asked Mr.

Prigozen to excavate all following areas:- around BK-10 (as it could

be localized problem)- entire abandoned tunnel running towards BK-10

(to investigate any more product in tunnel)- in front of repair shop

in area of B-7- around B-9/MW-2 as found free product in itsuggest to

remove old abandoned gasoline UST as found 236 ppb MTBE in well BK-3

nearby tank location. Paul suggest to sample BK-3 again before any

excavation in this area. mentioned to Mr. Prigozen that based on gw

analytical results from BK-3, the department doesn't require removal

S104621824

of the tank, but as they will do excavation in other part of site, it will be easy to use on-site equipments to dug this suspected area. Mr. Prigozen will discuss with Paul regarding gasoline UST removal. found self-contained parts cleaning machine with small tank (probably 15-20 gal). no stains/odors found around parts cleaning machine. found well cap missing for BK-10. asked Paul to replace it. asked Mr. Prigozen to send his tenant's contact info. 12:46 PM:- received email from Mr. Prigozen with tenant's contact info. David Williams Director of Real Estate and Construction Sunbelt Rentals 800 Hartford Turnpike Shrewsbury, MA 01545-4107 Ph. (508) 925-1611 (O) (508) 245-1107 (C) email: David.williams@sunbeltrentals.com 1:40 PM:- left message for Mr. Williams. 3:51 PM:- sent revised STIP to Mr. Prigozen. asked him to submit signed STIP by end of 07/13/09. 07/06/09-Hiralkumar Patel. 1:45 PM:- received message from Mr. Williams. 07/24/09-Hiralkumar Patel. 10:41 AM:- received work plan from Ecosystems. proposes to monitoring/recover product from wells, excavate contaminated soils from areas of B-7 and BK-10. 07/27/09-Hiralkumar Patel. 10:40 AM:- spoke with Paul about work schedule. today he will send cost estimates to Mr. Prigozen and expect to start work by Aug. 3, 2009. asked him to send confirmed work schedule. 10:43 AM:- sent email to Mr. Prigozen approving proposed plan and asked to submit work schedule. email copied to Paul. 08/06/09-Hiralkumar Patel. 11:53 AM:- left message for Paul about work schedule. 12:18 PM:- received message from Paul. he met property owner and tenant yesterday to coordinate excavation and planning to start work on 08/14/09. will send email with confirmed schedule. 08/12/09-Hiralkumar Patel. 10:39 AM:- received email from Paul. they will start soil excavation on 08/21/09 and expect to finish by 08/22/09. 2:10 PM:- sent email to Paul. asked him to call me once excavation starts as planning to visit site during endpoint sample collection. 08/21/09-Hiralkumar Patel. 8:48 AM:- spoke with Richard (845-803-2709) at Ecosystems. they have started excavation in area of BK-10. found contaminated sand, construction debris and clay layer. thick clay layer found right below water table. 11:20 AM:- received call from Richard. while digging area around BK-10, well was destroyed and found brick structure in ground and heavily contaminated soil. 2:00 PM:- visited site. area around BK-10 was excavated and partially backfilled after collecting endpoint samples. found water in excavation, but no product. Richard mentioned that brick walls found on both side of BK-10 running parallel to N. 13th Street. Richard believes that this channel in ground around BK-10 was holding some product which was appearing in BK-10. crew was excavating area around B-7 (in front of garage entrance) at the time of site visit. found sticky black material from excavation with strange odors. Richard believes that this black material could be source of heavy contamination in B-7. will excavate to depth of 8 ft where contamination found during soil investigation. crew was also working inside garage where B-2 was installed and product found in MW-2. will collect appropriate endpoint samples. left site around 3 PM. 3:47 PM:- received call from Mr. Prigozen. while working inside garage around MW-2, they found abandoned tank in ground. will investigate more. 08/22/09-Hiralkumar Patel. 9:25 AM:- received call from Mr. Prigozen. they are planning to remove tank. 08/24/09-Hiralkumar Patel. 8:09 AM:- received call from Mr. Prigozen. he mentioned that tank removal is not possible as tank is located closed to foundation wall. it is about 1,500 gal tank. as per Mr. Prigozen, tank was full of product when discovered. asked him to pump out tank, clean it and

Map ID

SYLVAN EQUIPMENT (Continued)

S104621824

then collect soil samples through bottom and sides of the tank to confirm no contamination around tank.08/25/09-Hiralkumar Patel.10:58 AM:- spoke with Mr. Prigozen. they pumped out at least 3,000 gal of product from tank. currently cleaning tank.09/23/09-Hiralkumar Patel.2:22 PM:- received call from Mr. Williams from Sunbelt Rentals inquiring about waste oil tank registration.2:26 PM:- sent email to Mr. Williams with PBS registration form and instruction.09/28/09-Hiralkumar Patel.2:54 PM:- left message for Paul inquiring about cleanup report.10/30/09-Hiralkumar Patel.2:25 PM:- received tank closure and cleanup report from Ecosystems. abstract:- found shallow (18 inches) dark-stained soil immediately beneath the asphalt during excavation around BK-10- beneath the stained material, found construction debris to 7 ft bg around BK-10; no evidence of contamination- immediately beneath well BK-10, a brick lined channel was encountered at 10 ft bg; expanding northwest-southeast for approx. 15 ft, the channel contained grossly contaminated sandy soil and debris- excavation in area immediately southeast of the machine shop found no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg- found 3,000 gal previously unknown UST in area of MW-2 inside shop- collected four soil samples through sidewall and two soil samples through bottom of 3,000 gal tank- collected total of six endpoint soil samples (four sidewalls and two bottoms) from each excavations at BK-10 as well as outside of repair shop- collected groundwater samples from wells BK-4, BK-13, BK-14, BK-15 and MW-1- found little SVOC contamination in endpoint soil samples, but no VOC contamination- found VOC contamination in groundwater sample from BK-13 (but as per report dated 03/04/10, sampling data for BK-13 and BK-14 were switched in the subject report and contamination was actually found in BK-14)- proposes quarterly monitoring for a year based on groundwater result from BK-13VOC result:

-----BK-14Benzene-----570Toluen
e-----86Ethylbenzene-----530Xylene-----
-----2391,2,4-Trimethylbenzene-----1,
400Naphthalene-----430MTBE-----8711/

02/09-Hiralkumar Patel. reviewed all previous soil and groundwater data and found:- according to Limited Phase II Environmental Site Assessment, dated Aug. 16, 1999, no contamination found in soil sample in BK-4 at 7-9 ft- found free product in well BK-4, BK-10 and well MW-2 (inside repair shop)- found soil contamination at the entrance of repair shop- contaminated soil removed from area around BK-10 and at the entrance of repair shop- found old 3,000 gal tank inside repair shop nearby MW-2- collected soil samples through walls and bottom of 3,000 gal UST and found no contamination- installed two wells BK-13 and MW-1 downgradient from BK-4- no free product ever observed in BK-13 and MW-1- no free product or groundwater contamination observed in BK-4 during sampling in Oct. 2009- found soil and groundwater contamination in area around sediment trap (BK-6 and BK-6A)- found high PID in BK-6A throughout boring (from 21.3 ppm to 2,350 ppm with max at water table at 7 ft depth)- no excavation conducted in area of sediment trap spoke with Richard about excavation around sediment trap and BK-6/BK-6A area. Richard mentioned that as found clean sidewall sample from excavation in front of repair shop area, they didn't excavated area around sediment

S104621824

trap.11/03/09-Hiralkumar Patel.9:35 AM:- spoke with Mr. Prigozen and informed him that the department requires removal of contaminated soil from area of BK-6/BK-6A (as there was soil contamination above water table and high PID readings during installation of boring BK-6A). also mentioned that the Department suggest to excavate area around BK-4, while excavating area around BK-6A, as found free product earlier. Mr. Prigozen requested copy of site map and he will discuss with Ecosystem.9:52 AM:- spoke with Richard about location of 3,000 gal tank and MW-2 inside repair shop. Richard mentioned that MW-2 was about 6 ft from tank's north end and there was drain between tank and MW-2. they removed contamination from drain and MW-2 areas. MW-2 was destroyed during excavation work.10:32 AM:- sent email to Mr. Prigozen with copy of site maps with sample analyticals and asked Mr. Prigozen to remove contaminated soil from area of sediment trap. email copied to Paul.11/20/09-Hiralkumar Patel.3:02 PM:- spoke with Mr. Prigozen regarding excavation in sediment trap. he spoke with Paul and waiting for his response. will call back.11/24/09-Hiralkumar Patel.10:39 AM:- received email from Richard. they are discussing with Mr. Prigozen and will call back by next week.12/04/09-Hiralkumar Patel.2:43 PM:- left message for Mr. Prigozen.2:47 PM:- spoke with Richard. they are currently discussing and will call back by end of 12/07/09.3:45 PM:- received call from Mr. Prigozen. he spoke with Richard and will call back once gets answer from Ecosystem next week.12/09/09-Hiralkumar Patel. received email from Ecosystem (at 5:20 PM on 12/08/09) including response to soil excavation requirement in area of BK-6/BK-4 (response was recalled immediately). Ecosystem proposed for quarterly groundwater sampling instead of soil excavation in area between BK-6 and BK-4 based on endpoint samples from recent excavation and groundwater sample results in Oct. 2009.2:15 PM:- spoke with Mr. Prigozen. based on level of soil contamination and depth of water table, suggested Mr. Prigozen to excavate area around sediment trap and BK-4 to remove probably last spot of contamination. Mr. Prigozen mentioned that he would like to do excavation, if any, in his presence. he is out of NY during winter and will be back in summer. he requested to postpone soil excavation, if any, till summer.based on spill history and soil/gw sample results, approved Mr. Prigozen's request to postpone any soil excavation till summer, but required monthly monitoring and quarterly sampling from existing wells.2:31 PM:- spoke with Richard at Ecosystem regarding their response which was recalled. Richard mentioned that there is some change in it and will send revised one. Richard requested to hold requirement of gw monitoring and sampling until they submit revised response.12/15/09-Hiralkumar Patel.11:38 AM:- spoke with Richard regarding response to soil excavation in area of BK-6/BK-4. Richard mentioned that owner's attorney is currently reviewing it and will submit soon.12/21/09-Hiralkumar Patel.2:02 PM:- spoke with Richard and asked to send document by end of tomorrow.12/22/09-Hiralkumar Patel. received email from Richard (at 4:29 PM on 12/21/09) including response regarding excavation in area of BK-6/BK-4. Ecosystem recommends at least three quarterly rounds of groundwater sampling from existing wells and continued monitoring of the booms in BK-4 prior to decision regarding implementation of any additional remediation.12/23/09-Hiralkumar Patel.1:37 PM:- left message for Mr. Prigozen and informed him that the department is agreed with recommendations for three rounds of quarterly sampling. asked him to provide dates for first round of sampling.1:39 PM:- spoke with Richard. informed him that the department agreed with

MAP FINDINGS

SYLVAN EQUIPMENT (Continued)

S104621824

their recommendation of quarterly groundwater sampling. asked Richard to send dates for first round of sampling. 1:53 PM:- sent email to Mr. Prigozen and asked to submit first quarterly groundwater sampling report by the end of 02/12/10. email copied to Richard and Paul. 2:54 PM:- received call from Mr. Prigozen. he received email and will ask Paul to collect groundwater samples in Jan. 2010. 03/04/10-Hiralkumar Patel. 12:02 PM:- received first quarterly groundwater sampling report. collected groundwater samples from wells MW-1, BK-4, BK-13, BK-14 and BK-15 on 02/01/10. groundwater samples were analyzed for VOCs (via 8260) only. no free product observed in well BK-4. found VOC contamination in groundwater sample from BK-14 and very minor contamination in other wells. but as per report from Oct. 2009, no contamination found in BK-14, but contamination was found in BK-13. Paul mentioned that sample results for BK-13 and BK-14 were switched in report dated 10/30/09. groundwater

analyticals:

-----BK-14Benzene-----469Toluen
e-----89Ethylbenzene-----485Xylene-----

22/10-Hiralkumar Patel. received quarterly groundwater sampling report from Ecosystems. on 06/08/10, they sampled wells MW-1, BK-4, BK-13, BK-14 and BK-15. found contamination in groundwater sample from well BK-14: the well in previous sediment trap area. found only MTBE (71 ppb) in well BK-4. will sample wells again in Sep. 2010. groundwater

analyticals:

-----BK-14Benzene-----600Toluen
e-----92Ethylbenzene-----470Xylene-----
-----1961,2,
4-Trimethylbenzene-----930Naphthalene-----250MTBE-----
-----6411:56 AM:- spoke with Mr. Prigozen. informed

him that groundwater is contaminated near sediment trap area and if they continue groundwater monitoring and are planning for no excavation, then this case may be transferred to remediation group for long-term remediation. Mr. Prigozen will discuss with Ecosystems and will call back by 07/10/10. 07/28/10-Hiralkumar Patel. 11:08 AM:- received email from Mr. Prigozen. he mentioned that they will excavate area around BK-6/BK-4 in August, 2010. Ecosystem will send work schedule. 08/04/10-Hiralkumar Patel. 9:01 AM:- received email from Richard. they have scheduled a soil excavation around sediment trap on 08/12/10. work will start at 9 AM. 09/13/10-Hiralkumar Patel. 11:51 AM:- sent email to Paul inquiring updates. email copied to Mr. Prigozen. 11:53 AM:- received email from Paul. he will submit report by end of Sep., 2010. 10/26/10-Hiralkumar Patel. 1:56 PM:- received supplemental remediation report from Ecosystems. the submitted report doesn't include info about depth of endpoint sidewall samples and sample analyticals were compared with Part 375 instead of TAGM 4046. 10/27/10-Hiralkumar Patel. 10:22 AM:- spoke with Richard at Ecosystems regarding excavation dimension and endpoint sampling depths. Richard mentioned that final excavation was approx. 50 ft by 30 ft to 15 ft depth. they collected endpoint sidewall samples at groundwater interface (at 7 ft depth) and bottom soil sample was collected at 15 ft depth. as per Richard, groundwater was seeping into excavation at very low rate, so groundwater was not present in excavation for sampling. asked Richard to submit revised report including info about sidewall sampling depth and sample results

S104621824

comparison with TAGM 4046 instead of Part 375.10:31 AM:- left message for Mr. Prigozen. informed him that based on results of endpoint samples, the department requires further investigation/remediation.10:40 AM:- sent email to Richard asking to submit revised report. email copied to Mr. Prigozen.11:38 AM:- received call from Mr. Prigozen. he mentioned that he doesn't remeber discussing about excavation around BK-4 and based on groundwater sampling results, he does not want to dug in area of BK-4. informed Mr. Prigozen that based on quarterly groundwater sampling results from BK-4, the department does not require excavation, but based on endpoint sample results from recent excavation, the department requires further investigation/remediation.11/30/10-Hiralkumar Patel.9:32 AM:- spoke with Rich. he will submit revised report. they are proposing for groundwater monitoring at this time and based on monitoring results, may propose additional investigation in former sediment trap area.12/02/10-Hiralkumar Patel.2:13 PM:- received revised report from Ecosystems.- excavated area around former sediment trap and well BK-14- no field evidence of contamination until groundwater was encountered at approx. 7 ft bg and in shallow soils at the far southeastern corner of the excavation where an area of heavy, bituminous material was encountered at between 2 and 3 ft bg- during excavation, petroleum odors and PID readings between 300 and 600 were recorded- five endpoint samples (four sidewalls and one bottom) were collected from excavation- sampled groundwater in wells BK-4, BK-13, BK-15 and MW-1- petroleum contaminated soils remain at depths greater than 15 ft below the former sediment trap and below static water level- found heavy contamination in bottom endpoint soil sample- very minor VOC contamination found in groundwater samples (max 43 ppb MTBE in BK-4)-----bottom 15 ft
bgBenzene-----3,
400Toluene-----2,
900Ethylbenzene-----31,
000Xylene-----5,4001,2,
4-Trimethylbenzene-----210,000Naphthalene-----29,
000Isopropylbenzene-----19,
000n-Butylbenzene-----33,
000n-Propylbenzene-----37,000due to heavy soil contamination in endpoint bottom sample and heavy contamination in groundwater sample from well BK-14, which was installed in the vicinity of the sediment trap, the department requires further complete delineation of soil and groundwater investigation including installation of one well at the location of endpoint bottom sample with deeper screen.12/07/10-Hiralkumar Patel. discussed with DEC Austin regarding soil contamination below water table. he asked to contact MGP project manager in Albany as MGP site was in neighbourhood.11:10 AM:- spoke with DEC William Ottaway in Albany regarding MGP site. Bill mentioned that Douglas MacNeal is the project manager for MGP site (V-00732) on Kent ave. Bill mentioned that MGP waste contains very high SVOCs and may have some VOCs.reviewed recent report. no SVOCs found in any endpoint sample.1:38 PM:- sent letter to Mr. Prigozen requiring additional soil and groundwater investigation in former sediment trap area. letter emailed to Mr. Prigozen and Paul.12/20/10-Hiralkumar Patel.2:22 PM:- received message from Paul from Ecosystems.12/21/10-Hiralkumar Patel.2:31 PM:- left message for Paul.12/29/10-Hiralkumar Patel.1:35 PM:- received email from Rich. a well at the former sediment trap will be installed on

01/06/11.01/04/11-Hiralkumar Patel.3:21 PM:- spoke with Rich. they will start well installation work around 8 AM. he also mentioned that a new drain structure has been installed in the previous sediment trap area. so they have to relocate the new well. Rich will decide well location once visit the site.01/06/11-Hiralkumar Patel.10:01 AM:- received call from Rich. they installed boring in area close to former sediment trap. boring was installed to 19 ft depth where they found refusal. during boring, found 160 ppm on PID at groundwater interface (groundwater at 7 ft depth) and 75 ppm from 10-15 ft depth. there was no recovery in 15-20 ft range. the boring was installed in previously excavated area to 15 ft depth. so highest PID was found at groundwater interface in backfill material. a well will be installed in boring with 15 ft of screen. as high soil contamination found at 15 ft depth in endpoint sample from excavation and as no recovery in 15-20 ft depth, asked Rich to install another boring in area.11:15 AM:- visited site. Rich installed another boring to 20 ft depth and collected soil from 15 to 20 ft depth only. minor odor noticed in clayey material from 15 to 20 ft depth. asked Rich to collect two soil samples: one at 15-16 and one at 19-20 ft depth. Rich will sample all existing wells, around former sediment trap area, next week.02/17/11-Hiralkumar Patel.1:13 PM:- received supplemental investigation report from Rich. abstract:- two soil borings (2B-1 and 2B-2) installed in former sediment trap area- collected two soil samples from each boring: at 7 and 15 ft from 2B-1 and at 15 and 20 ft at 2B-2- installed 2 inch well (BK-14(R)) at boring 2B-1 with 10 ft of screen (from 5 to 15 ft bg)- sampled water from wells BK-4, BK-13, BK-14(R) and BK-15- no contamination found in any soil sample (not even in sample at 15 ft bg in 2B-1 which was collected in same area as endpoint bottom sample after excavation around former sediment trap)- very minor contamination found in water samples except sample from BK-14(R)groundwater
analyticals:-----BK-14(R)
Benzene-----190Ethylbenzene-----280Xylene-----1201,2,4-Trimethylbenzene-----1,300Naphthalene-----210- recommended sampling of wells MW-1, BK-4, BK-13, BK-14(R) and BK-15 after three months03/17/11-Hiralkumar Patel. discussed with DEC Austin. based on consistent data in well BK-14, Austin asked for remediation.3:16 PM:- sent letter to Mr. Prigozen requiring submission of a RAP for remediation of contamination in and around the area of the former sediment trap. letter emailed to Mr. Prigozen, Paul and Rich.05/20/11-Hiralkumar Patel.10:40 AM:- received call from Paul. he mentioned that as groundwater contamination found in only by former sediment trap area, he propose to monitor groundwater for some time before any active remediation. he will send work plan by 06/03/11.07/20/11-Hiralkumar Patel.1:46 PM:- received quarterly groundwater sampling report from Ecosystem. on 04/28/11, groundwater samples were collected from wells MW-1, BK-4, BK-13, BK-14R and BK-15 and analyzed for VOCs only. next round of quarterly sampling is schedule for the end of July 2011. found contamination in samples from BK-14R.groundwater
analyticals:-----BK-14(R)
Benzene-----44Ethylbenzene-----150Xylene-----1821,2,4-Trimethylbenzene-----380Naphthalene-----240Paul mentioned that results of groundwater samples support the conclusion that significant natural attenuation of contamination is taking place

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 8/05-Spoke with A-1 Crown leak. Will get back to me with the owner information.9/05-Spoke to Stephanie Eisenberg. tank is no longer in use. Will send in paperwork. S. Scharf4/06- Called stepahnie Eisenberg- reminded her to send in the paperwork that tanks is empty and building now uses gas.9/14/06 called Stephanie Eisenberg (owner) - left message. bf9/21/06 ttf letter sent to S. Eisenberg. bf4/29/09 On 3/30/09, received letter from Mark Salamack of PTC. Tank failed because of many connections to heaters throughout the building were not properly sealed off. No contamination found when tank was removed. No odors or staining of soil found. Three samples taken from under the tank. Minor exceedances in 1 Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene. NFA. bf

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D040
Waste name: TRICHLOROETHYLENE

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY"TRANSFERRED FROM Y.KRIMGOLD.Also, refer to spill # 9607376 & 9401167. 12/14/04-Spill Case is trnsferred to I. Islam. The site is under remediation by LiRo Engineers. - 11/4/22/05- Reviewed the quarterly monitoring report (Nov./04 - Jan./05). The monitoring data show persistently high level of both soil and groundwater contamination. LiRo claims that the long history of the site for operation as a manufactured gas plant (MGP) may be the cause of this. However, a letter has been issued in order for LiRo to consider alternative measure(s) to remediate the site. The monitoring report has been installed in the eDoc Folder. - 11/5/13/05- Afsar Samani of DDC raised the MGP issue of this site in the meeting with DEC on 5/4/05 as LiRo has written them either to increase the cost for remediation of the MGP related contaminants at the site or get the Key Span and/or other responsible agency handle the MGP site through DEC. Koon Tang is exploring with the Central office as to the finding

Remarks: of responsible agency to handle the former MGP site remediation.- II.
5/31/03- Joe Moloughney of Central Office confirmed via email that
this site would be remediated under the KeySpan Consent Order for MGP
sites. This site has been assigned with # 224055 as the MGP site.
Therefore, the spill is closed.- II
also ground water affected - repts says that site is contaminated
with petro and heavy metals. Also see spill # 9401167.

DER Facility ID: 363668
DEC Memo: TTF sent to property manager:Mr. Martin Gurshon233 Broadway - Suite 2704New York, NY 1027911/20/09. J.Krimgold reviewed the letter report submitted by Pro Test Enviro and dated 10/30/09. According to the letter the tank system failed the test due to a leak in the supply and/or return lines. The damaged portions of these line were replaced and the tank system retested and passed. During excavation of piping contaminated soil was encountered. This soil was excavated, drummed and properly disposed of. End point samples show no contaminant above TAGM limits. Case closed.

Remarks: 1518 The caller advised dispatch the tank has failed their test and requested to obtain a spill number. No water ways have been affected. This was just a tank test failure. The owner will be incharge of the fixing of the system. At this time chemicals have spilled. 4000 gallon underground tank.

Site Description: Transition from V00704 and C224055. The Williamsburg Works Manufactured Gas Plant (MGP) site is composed of three parcels of land located on the east bank of the East River in Brooklyn New York in Kings County. The site is located between North 11th and North 12th Streets on the west side of Kent Avenue. A manufactured gas plant operated on the site from at least 1887 to 1916 according to Sanborn Fire Insurance(Sanborn) maps. Current land use includes a document storage warehouse, an inactive petroleum terminal, and one vacant lot which until recently housed a Sanitation Dep't garage. The City of NY has identified this site for construction of a proposed waterfront park, which would extend far beyond site boundaries to the north and south. One parcel (50 Kent Avenue) has already been

acquired. An IRM is slated for this parcel in late 2012.

Env Problem: According to the USEPA, a preliminary assessment (PA) was prepared for the site dated September 24, 1986. A copy of the PA was not supplied with the application. The environmental assessment for this site has not yet been completed. The site is the confirmed location of a historic MGP. MGPs have known onsite by products of DNAPL and purifier waste. The materials are made up of BTEX, PAHs, and cyanide. The DNAPL causes contravention of both groundwater and soil SCGs. The site is also adjacent to the East River and several public and private buildings, including residences. DNAPL is known to migrate into surface water bodies, contaminating sediment. The BTEX components are also known to contribute to soil vapor issues. There are already reports of tar seeping into the East River and tar has been found on an adjacent property.

Health Problem: The NYSDOH will evaluate the potential for impacts to public health from exposure to site contaminants once sufficient information from the investigation of the site becomes available for review.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: 3/21/2005 There was an earlier tank test failure spill number (0004062-DeMeo) which has now been closed out in favor of this new spill number. Earth Tech believes that the old tank was relined after the tank failed the prior tank test several years ago, however no work was ever done to remediate the contamination which occurred because of that leak. Earth Tech believes that approx 2 years ago this buried tank was taken out of service. Since that time the building has been supplied by an above ground 5,000 gal tank. Unknown if the buried tank was ever emptied. Earth Tech recently did soil borings around the UST area and came back with high contamination levels. This information was forwarded to the City SCA (SCA Contact: Lee Guterman 718-472-5802) SCA has now decided to removed the

UST and excavate out the contaminated soil around it. Earth Tech is modifying the standard city bid package to site specific conditions and will work with the city as they put the excavation/remediation work out to bid. Bid package should go out around April 1st, 2005. Work should be done summer 2005. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang.

-----7/9/07: Reassigned from Koon Tang to Kartik Chanda (Chanda)7/18/07: Kartik Chanda of DEC reviewed all documents regarding this spill case. On 7/18/07, Chanda sent a letter to Ms. Lee Gueterman, Manager IEH Department, NYC School Construction Authority, requiring that the following documents be submitted to the DEC for review by 9/4/07. 1. An explanation of the cause of the tank system failure; 2. Either a description of the work performed to restore the integrity of the tank system (including retesting results), or a description of the work performed to close (decommission) the tank; 3. Information regarding petroleum contamination found at the site and cleanup activities (if any) associated with a release from this tank system; 4. Any available documentation (i.e., invoices, bills, sampling analysis reports, etc.) pertaining to the work performed at this site associated with this violation. 10/29/07: Chanda called Mr. Drew Pardus (NYCSCA) to get updated information regarding this spill site. He stated that NYCSCA is finding the information regarding this spill. NYCSCA will send an investigation report shortly. 12/6/07: Chanda received an email (see edocs) from Ms. Lee Gueterman, NYCSCA. She stated that "The Investigation Summary Report for Automotive Trade HS has been prepared and is under my review. A Remedial Action Plan is being prepared and is anticipated to be completed by 12/15/07." 2/12/08: Chanda received a Subsurface Investigation Summary Report from NYCSCA, prepared by TRC Engineers, Inc. (TRC), dated November 9, 2007. 2/28/08: Chanda has reviewed the Subsurface Investigation Summary Report and has the following comments: -Subsurface investigation report regarding the 20,000-gallon #4 fuel oil UST. - About two years ago, a tank tightness test was performed and the tank failed. At that time UST was taken out of service and a temporary 5,000-gallon AST was installed to supply #2 fuel oil to the boiler. - The soil data indicated that the UST had leaked and had contaminated the surrounding soils near the UST and the supply line to the building. VOCs and SVOCs were detected in soil samples. The greatest impacts appear to be in the immediate vicinity of the UST and just below the depth of UST near the water table. -VOC were not detected in groundwater beneath the site. Several SVOCs were detected in groundwater beneath the site. -The results of finger print analysis indicate that the impacts are associated with #4 fuel oil. - The groundwater table has been measured between 10 and 11 feet bgs. - Removal of UST and associated impacted soil could potentially damage the adjacent school building and concrete vehicle access ramp. 3/3/08: Chanda discussed with Joe Sun (supervisor), and sent a letter with Stips and generalized Corrective Action Plan via certified mail to RP (Ms. Lee Gueterman) and Mr. Drew Pardus (NYCSCA). The Department requires installation of permanent monitoring wells to determine the correct groundwater flow direction at the site. The signed STIP must be submitted to DEC by 3/25/08. 3/24/08: The Stipulation Agreement was signed by the RP (The New York City Department of Education). 3/31/08: Chanda sent a fully executed STIP to the RP and

U000409472

required that a Subsurface investigation and monitoring well installation report be submitted to DEC by 6/2/08 for review and approval.4/3/08: Chanda received a Subsurface Investigation Work Plan from NYCSCA, prepared by TRC Engineers, Inc. (TRC)dated March 18, 2008.4/4/08: Chanda has reviewed the Subsurface Investigation Work Plan and has the following comments:-TRC will advance ten (10) soil borings across the Site as part of monitoring well installation. Soil samples will be analyzed for the STARS volatile organic compounds (VOCs) and STARS SVOCs.-TRC will install nine (9) two-inch diameter and one (1) four inch diameter flush mounted permanent groundwater monitoring wells. The wells will be screened approximately 5 feet above the water table and 10 feet below the water table. The samples will be analyzed for STARS VOCs and STARS SVOCs.4/7/08: Chanda sent the work plan approval letter to Ms. Lee Guterman, NYCSCA and her consultant (TRC Engineers Inc.), requiring that an Investigation Report must be submitted to the Department by June 2, 2008 for review and approval.4/17/08: Chanda received the following email from Mr. Drew Pardus, NYCSCA:"TRC is scheduled to start performing the field work for the investigation on April 24, 2008. We will provide the investigation report as soon as it is available. Please feel free to contact me if you have any questions or comments. Sincerely, Drew Pardus"6/2/08: Chanda received an email from Mr. Bob Kanaparthi, NYCSCA, regarding one week time extension to submit the Investigation Report for this site. Chanda sent an extension approval letter to Ms. Guterman, NYCSCA. The Deadline is extended to 6/9/08.6/9/08: Chanda received a Site Investigation Report from NYCSCA, prepared by TRC Engineers, Inc., dated June 6, 2008. (see eDocs)7/3/08: Chanda has reviewed the site investigation report and has the followings:-The site consists of a three-story public school building with basement, and asphalt-paved parking and landscaped areas.-The results of the analyses of the soil samples revealed detectable concentrations of VOCs and SVOCs.- Permanent flush mounted ten (10)GW monitoring wells were installed at the site.-The depth to groundwater measured at the Site is approximately 8 to 10 feet bgs.-No SVOCs detected in GW at concentrations exceeding Class GA Values.-Several VOCs were detected in GW samples.-NAPL was not encountered in any of the GW monitoring wells during gauging with an oil /water interface probe.-Based on GW table surface elevation measurements, only a slight gradient, indicating a predominant inward flow direction, exists beneath the site. Based on the results of site investigation, and considering the result of previous investigation, TRC concluded that there is a potential damage of school building that could result from attempting to remove the 20,000-gallon UST from the site. TRC recommended the following:* Permanently close-in-place the 20,000-gallon UST;* In-service waste oil UST identified during the geophysical survey is registered, operated and maintained in accordance with applicable regulations;* Close or take out of service the concrete vault in accordance with applicable regulations;* Monthly monitoring of the permanent groundwater monitoring wells for light NAPL to confirm that it is not present;* Implement a program to ensure proper maintenance of the asphalt pavement in the vicinity of the UST and impacted subsurface soil;7/9/08: Chanda discussed with Joe Sun, NYSDEC regarding the findings of the Site Investigate Report. It is concluded that the Department (DEC) requires that a Remedial Action Work Plan to remove all contaminated media from this subject site.7/11/08: Chanda sent a letter to RP (Ms. Lee Guterman, NYCSCA) and her consultant (TRC) requiring that a Remedial Action Plan (RAP)

be submitted to DEC by 9/11/08 for review and approval.8/1/08: A meeting was held on 7/30/08 among DER staff, NYCSCA and TRC Environmental Consultant Inc. (TRC) to discuss the site investigation results and Remedial Action Plan (RAP) to remediate all the contaminated media. The meeting's consensus was that a RAP be submitted to DEC by 9/11/2008 for review and approval.9/11/08: A follow-up meeting was held on 9/10/08 among DER Staff, Mr. Drew Pardus(NYCSCA), and Mr. David Glass (TRC Environmental) regarding the findings of the recent inspection of the school building basement for this site.As agreed at the meeting, NYCSCA will conduct the following activities associated with the Site:Clean the 20,000-gallon UST in accordance with applicable regulation but leave it unfilled to use a monitoring point for a short time.Clean the standing oil into the concrete vault. Evaluate the size and structure of the concrete vault and determine the piping layout associated with the vault. Also, determine if the pumping system is still in operation or needs to be.Clean the oil strains inside the basement areas and tank vault area to see if they return. Advance several monitoring wells in the vicinity of the 20,000-gallon UST.Prepare and submit a brief work plan with borings and monitoring well locations. Include an implementation schedule.9/11/08: Chanda sent a letter to Ms. Lee Guterma requiring that a brief work plan be submitted to DEC by 10/12/08 for review and approval.10/10/08: Chanda received a Site Investigation and Interim Remedial Scope of Work from NYCSCA prepared by TRC Engineers, Inc., dated 10/7/08. Chanda reviewed the work plan. The work plan has the following:* Investigation of Concrete Vault*Removal and Monitoring of "Seeps"* UST and Vault Cleaning and Inspection*Geophysical Survey* Four groundwater Monitoring Wells Installation and Sampling in the vicinity of the 20,000-gallon UST10/31/08: A meeting was held on 10/21/08 between DER staff and NYCSCA to discuss the project status and investigation work plan regarding this site. On 10/30/08, DEC approved the work plan. Chanda sent a letter to NYCSCA and Consultant (TRC) requiring that a report summarizing the findings of the investigation be submitted to the Department by December 30,2008. 05/13/2009: This spill case was transferred to A. Doronova. - ADReviewed the file. The investigation summary report requested by Kartik Chanda of DEC was not submitted yet. AD12/04/2009: Received a RAP. Will review. PDF copy is missing. To request its submission. AD12/08/2009: Received a pdf copy. DL to eDocs. AD12/30/2009: Reviewed the RAP. It states that based on previous investigations, evidence of a UST defect was not found; free product is present in soil and GW in the vicinity of UST, and is apparently being conveyed to the concrete vault via subsurface drainage system beneath the building basement; dissolved phase impacts to GW from the release are minimal and limited to the immediate vicinity of the UST. The RAP proposes the following: closure-in-place of 20,000-gallon UST and annual inspection of a concrete vault, the pump pit in the boiler room, and monitoring wells with removal of accumulated oil (if present). Proposed course of actions is questionable. To discuss the RAP with J. Kolleeny. AD01/06/2010: Discussed the RAP with J. Kolleeny of DEC. Called and spoke with D. Pardus of SCA regarding the RAP and vault investigation. He requested a meeting with DEC. Scheduled the meeting for January 21, 2010. AD 01/21/2010: I and J. Kolleeny of DEC met with Drew Pardus and Bob Kanaparthi of NYCSCA and Charles Guder of TRC. Discussed the proposed RAP. It was agreed that two additional soil borings will be advanced in the vicinity of the concrete vault,

and based in the field observation of the soil samples, one boring will be finished as a permanent monitoring well. It was decided that gauging of the site monitoring wells and vault pumping will be performed quarterly and GW sampling will be semi-annually. Addendum to the RAP will be submitted to DEC for review and approval. AD04/30/2010: Called and spoke with D. Pardus regarding submission of the addendum to the RAP. He said that it was prepared and is now under review for budgetary approval. AD06/20/2011: Received an e-mail from Drew Pardus saying: "Ainura, In order to continue progress at Automotive Trade HS to remediate DEC Spill 0413160 and in light of constrained City budgets, an inspection of the out-of-service pump station where oil accumulates was performed. TRC's observations of this inspection and removal of oil from the out-of-service pump station (by PTC on behalf of DSF) are provided below. Another site inspection and visual monitoring of the permanent wells will be performed in approximately three months to determine if free product is observed. If no free product is observed after multiple inspections, SCA will request that the fuel oil tank may filled (i.e., closed via abandonment) and no further action for Spill Case 0413160. Please feel free to contact me at 646-577-8280 if you have any questions. Sincerely, Drew Pardus" DL the attached document to eDocs. AD03/27/2012: Received an e-mail from S. Kline of SCA saying: "Ms. Doronova- As per your request, our consultant (TRC) has prepared the attached remediation action work plan addendum for the above referenced spill case. Our consultant will proceed with the scope of work described in the attached documents as soon as we have NYSDEC approval and we have secured funding for these additional remedial measures. Since Drew Pardus is no longer working on this project, I will be the SCA point of contact for this project moving forward. Please contact me with and questions or comments. Regards-Stephen Kline, P.E. NYC School Construction Authority I/EH Division 30-30 Thomson Avenue Long Island City, NY 11101 Cell (347) 242-7109 Stephen.kline@gza.com" DL the attached report and letter to eDocs. Will review. AD04/20/2012: Reviewed the work plan. It states that TRC proposes to do site investigation via advancing two soil borings with collection of soil sampling; installation on one monitoring well; quarterly groundwater monitoring and free product recovery. Soil sampling will include the following: TRC will advance two (2) soil borings (TRC-SB-1 and TRC-SB-2) adjacent to the subsurface drainage pipe between the concrete vault and the building (refer to Figure 1 for the boring locations). Geologic descriptions of the soil and field screening results will be recorded in field logs. One groundwater monitoring well (TRC-MW15) will be installed in one of the boreholes. The well will be installed in TRC-SB-1 as shown if no evidence of contamination is observed during the subsurface investigation. If contamination is observed, the monitoring well will be installed in the borehole showing the highest evidence of contamination. Quarterly groundwater monitoring will be performed for a period of one year. - Monitoring wells TRC-MW-1, TRC-MW-2, TRC-MW-3, TRC-MW-4, TRC-MW-5, TRC-MW-6, TRC-MW-7, TRC-MW-8, TRC-MW-9, TRC-MW-10, TRC-MW-11, TRC-MW-12, TRC-MW-13, TRC-MW-14, and TRC-MW-15 will be inspected and gauged. Any wells found to be damaged will be assessed for re-installation. - The entire monitoring well network will be gauged and sampled during the first quarterly monitoring event. If LNAPL is present in a well, groundwater will not be analyzed from that monitoring well. If the results of the analyses of groundwater from monitoring wells TRC-MW-6, TRC-MW-8, and TRC-MW-10

(upgradient wells) from the first quarterly sampling round are below Class GA Values, these wells will not be sampled during subsequent quarterly events. However, all wells will be gauged during each quarterly event. A quarterly monitoring report with conclusions and recommendations for further actions, if necessary, will be submitted to DEC. Vault Inspections and Product Removal: TRC will perform the following activities under this task: - periodic inspections and product removal at the concrete vault for a period of one year. For the first quarter, TRC anticipates performing 6 events (three during the first month, two during the second month, and one during the third month). Inspections/product removal events will occur once per quarter thereafter. - If oil is present in the vault, the procedure below will be followed: - The depth to the oil will be gauged and recorded; - The thickness of the oil and the thickness of the water will be gauged and recorded; and, - The oil and water will be removed from the vault by a vacuum truck for off-Site disposal. If no oil is detected in the concrete vault, the depth to the liquid in the vault will be gauged and recorded. - Similarly the boiler room pump pit and on-Site monitoring wells will be gauged for oil. If oil is detected in a groundwater monitoring well, the depth and thickness (if possible) of the oil will be measured and recorded, and the oil will be removed by a vacuum truck for off-Site disposal. If oil is detected in the boiler room pump pit, the pump system will be immediately shut down and the NYCDOE Division of School Facilities and the NYCSCA will be contacted to determine the appropriate course of action. - Waste generated will be properly transported off-Site for disposal in accordance with applicable laws and regulations. - The information collected during the vault inspections/product removal will be submitted with the quarterly monitoring reports.

AD04/24/2012: Discussed the work plan with J. Kolleen of DEC.
AD04/25/2012: issued and sent an approval letter to L. Guterman of SCA. DL pdf copy of the letter to eDocs. AD12/21/2012: Received a Project Progress Report #1 from TRC. DL the report to eDocs. Will review. AD02/01/2013: Reviewed the report. It states that field activities were conducted at the Site between July 14 and October 18, 2012. During this period, the following activities were completed at the site: In-place closure of the 20,000-gallon underground storage tank (UST); A 20,000-gallon UST, which is located beneath an asphalt paved parking lot north of the school building, was formerly used to store No. 4 and No. 6 fuel oil for the school's boiler and was taken out-of-service in 2003 and was cleaned in 2009. In accordance with the NYSDEC-approved RAP and RAP Addendum, the 20,000-gallon UST was permanently closed in-place in accordance with the applicable requirements of the NYSDEC and the FDNY on July 26, 2012. Prior to closing the UST in place, the UST was inspected to verify that the UST did not require additional cleaning. The UST was observed to contain a small amount of water but there was no evidence of residual product. The remaining contents of the 20,000-gallon UST were removed utilizing a vacuum truck and the UST and concrete hatch were then completely filled with concrete slurry. Geophysical survey; Subsurface soil investigation and installation of a permanent monitoring well; A hollow stem auger rig was used to retrieve soil samples. Soil samples were collected and screened for evidence of field contamination continuously from the ground surface to the boring completion depth. No visual or olfactory indications of contamination were observed in any of the soil samples collected. Soil boring TRC-SB-1/MW15 was advanced, east of and adjacent to the subsurface

MAP FINDINGS

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-1/MW15. Soil boring TRC-SB-2 was advanced, west of and adjacent to the subsurface drainage pipe, to approximately 21 feet bgs. One discrete soil sample, collected from 9 to 11 feet bgs, was selected for laboratory analysis. Groundwater was encountered at approximately 11 feet bgs in TRC-SB-2. Soil boring location TRC-SB-1/MW15 was converted into a permanent monitoring well and soil boring location TRC-SB-2 was patched at the surface with concrete. VOCs and SVOCs were not detected in any of the soil samples at concentrations above the SCLs for Fuel Oil Contaminated Soil found in Table 3 of CP-51. One round of Quarterly groundwater sampling; The first round of quarterly groundwater samples were collected from existing permanent monitoring wells TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW6, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW10, and from newly installed permanent monitoring well TRC-MW15 on July 26, 2012, July 30, 2012 and August 2, 2012. LNAPL was present in monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and these wells were therefore not sampled. The thickness of LNAPL in these monitoring wells could not be accurately gauged due to the viscosity of the LNAPL. An obstruction (debris) was encountered in TRC-MW9 on July 26, 2012, which was cleared by TRC on July 27, 2012 using one-inch PVC well screen. The well was redeveloped by TRC on July 30, 2012 and an inspection of the well and purge water indicated that the well was suitable for sampling. TRC-MW9 was sampled on August 2, 2012. The results of the analysis of groundwater sampling indicate that MTBE was the only VOC detected at a concentration exceeding the corresponding Class GA Value. MTBE was detected at a concentration of 8.3 ug/l in well TRC-MW8, which slightly exceeds the Class GA Value of 5 ug/L for MTBE. Monitoring well TRC-MW8 is upgradient of the Site and TRC concludes that the concentration of MTBE in the well is likely attributable to an off-site source and not to an on-site release. No other VOCs were detected in any of the groundwater samples at concentrations exceeding Class GA Values. SVOCs were not detected in any of the groundwater samples at concentrations exceeding Class GA Values. With the exception of a marginal exceedance of MTBE in TRC-MW8, which is attributable to an off-site source or regional conditions, VOCs and SVOCs were not detected in groundwater samples collected. Therefore, TRC recommends that upgradient monitoring wells TRC-MW6 and TRC-MW10 will not be sampled during subsequent quarterly groundwater sampling rounds. Four months of concrete vault and boiler room pump pit inspections; Four months of monitoring well gauging; and Four months of light non-aqueous phase liquid (LNAPL) recovery events. The concrete vault north of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on July 26, August 2, August 9, September 5, September 26, and October 18, 2012 by TRC. LNAPL was present during these events in the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14. The thickness of the LNAPL could not be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, based on observations noted using a bailer, monitoring well TRC-MW11 was observed to contain only minimal amounts of LNAPL. LNAPL was not present in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW10, TRC-MW15 and in the boiler room pump pit. LNAPL Product

AUTOMOTIVE TRADE HS 610 - BROOKLYN K610 (Continued)

U000409472

Recovery Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the Site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on July 26, August 2, August 9, September 5, September 26, and October 18, 2012. During the recovery events, the thickness of the LNAPL could not be accurately determined due to the high viscosity of the LNAPL; however, based on observations noted using a bailer, the thickness of the LNAPL was estimated to be less than 6 inches. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: The contents of the bottom of the concrete vault were removed below the elevation of the subsurface drainage pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). Since monitoring well TRC-MW11 was observed to contain only minor amounts of LNAPL, an oil absorbent sock was placed in this well for product recovery. The oil absorbent sock was removed and replaced during each recovery event and containerized in a 55-gallon steel drum which is staged on site. Approximately 15,604 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July through October 2012. Table 5 presents the amount of LNAPL and water recovered during each extraction event. The following activities are planned by TRC during the second quarter: Quarterly inspections and product removal of the concrete vault and monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 will continue. Progress Report #2 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in January 2013. The entire monitoring well network will be gauged during subsequent quarterly events. Quarterly sampling of the monitoring well network (with the exception of upgradient monitoring wells TRC-MW6, TRC-MW10, and any monitoring well which contains LNAPL) will continue. Progress Report #2 will include groundwater sampling results from the next round of groundwater sampling, which was performed in October 2012. AD03/04/2013: Received a project progress Report # 2. DL the report to eDocs. Will review. AD04/08/2013: Reviewed the report. It states that TRC performed field activities at the site between October 18, 2012 and January 25, 2013. During this period, the following activities were completed: Two rounds of quarterly groundwater sampling (October 2012 and January 2013); Concrete vault and boiler room pump pit inspection (January 2013); Monitoring well gauging (January 2013); and LNAPL recovery event (January 2013). Quarterly Groundwater Sampling: Groundwater samples were collected from 8 permanent monitoring wells: TRC-MW1, TRC-MW3, TRC-MW4, TRC-MW5, TRC-MW7, TRC-MW8, TRC-MW9, and TRC-MW15 on October 17 and 18, 2012 and on January 21 and 22, 2013. LNAPL was present in 5 monitoring wells: TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 and therefore, these wells were not sampled. The results of the analysis of groundwater sampling indicate the VOC methyl tert-butyl ether (MTBE) was the only VOC detected at a concentration exceeding the corresponding Class GA Value during the October 2012 and January 2013 sampling events in well TRC-MW8: MTBE - 12ppb in October 2012 - 5.1ppb in January 2012. Concrete Vault/Boiler Room Pump Pit Inspections and Monitoring Well Gauging: The concrete vault north

of the school building, the boiler room pump pit, and the groundwater monitoring well network were inspected and gauged for the presence of LNAPL on January 21, 2013 by TRC. LNAPL was present in the concrete vault and in 5 monitoring wells: TRC-MW2, TRC-MW11, TRCMW12, TRC-MW13, and TRC-MW14. LNAPL was not present in the boiler room pump pit or in monitoring wells TRC-MW1, TRC-MW3 through TRC-MW9, and TRC-MW15. The thickness of the LNAPL cannot be accurately determined due to the high viscosity of the oil identified in the concrete vault and monitoring wells. However, TRC determined the approximate thickness of the LNAPL in monitoring wells TRC-MW2, TRC-MW11, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013. An oil/water interface probe was used to measure the thickness of LNAPL by lowering the probe to the depth of LNAPL, then submerging the probe into the water until the sound indicated the presence of water, then raising the probe until the oil indicator sounded. LNAPL Product Recovery: Periodic recovery of LNAPL on behalf of the NYCSCA has been performed at the site since July 2012. LNAPL was removed from the concrete vault north of the school building and groundwater monitoring wells TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14 on January 21, 2013, consistent with the NYSDEC-approved RAP and RAP Addendum. During the recovery event, the thickness of the LNAPL in the concrete vault could not be accurately determined due to the high viscosity of the LNAPL. LNAPL was removed from the concrete vault and groundwater monitoring wells using a vacuum truck. The procedure for removal of LNAPL at the Site consisted of the following: - The contents of the concrete vault were removed below the elevation of the building underdrain pipe. This allowed LNAPL present in the pipe to flow into the concrete vault. LNAPL and water was then pumped from the concrete vault into the vacuum truck. - The vacuum truck was then used to pump oil and water from the monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14). The oil absorbent sock present in TRC-MW11 was saturated with LNAPL and was removed and replaced. The saturated sock was containerized in a 55-gallon steel drum which is staged on site. Approximately 3,650 gallons of LNAPL and water was removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) on January 21, 2013. A total of approximately 40 gallons of LNAPL and water were removed from each monitoring well and approximately 3,490 gallons of LNAPL and water were removed from the concrete vault for offsite disposal. The LNAPL and water removal was performed by Brookside under the supervision of TRC and transported to Clean Water of New York, Inc., of Staten Island, New York (Clean Water) for disposal. Approximately 19,254 gallons of LNAPL and water has been removed from the concrete vault and monitoring wells containing LNAPL (TRC-MW2, TRC-MW12, TRC-MW13, and TRC-MW14) from July 2012 to January 2013. Table 3 presents the amount of LNAPL and water recovered during each extraction event. Although accurate measurements of LNAPL thicknesses in the wells were not able to be obtained during previous events, based on measurements obtained during the January 2013 extraction event, previous observations made via bailing and also during the extraction events, TRC states that the LNAPL thicknesses in the wells appear to be decreasing. TRC will continue with quarterly inspection and LNAPL removal from the concrete vault and monitoring wells. Progress Report #3 will be submitted to the NYSDEC following the next inspection and product removal event, which will be performed in April 2013. AD

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

BROWNFIELDS:

Program: BCP
 Site Code: 463657

Site Description: Site Location: The site is located at 149 Kent Avenue in the Williamsburg area of Brooklyn, Kings County. It is along the north side of 5th Street between Kent and Wythe Avenues and is 0.92 acres in size. Site Features: An existing warehouse covers the property, and the building is currently vacant. Current Zoning/Uses: The current use of the site is commercial, and it is located in an M1-2/R6A mixed use district. The subject property was assigned a NYC E-designation as part of the Greenpoint-Williamsburg Rezoning. Historical Uses: The site operated as a rail terminal with two to three tracks for approximately 100 years prior to construction of the warehouse in 1988. The site has a recently listed large quantity generator ID NYR0001600242, which was related to the disposal of investigation-derived waste. Site Geology/Hydrology: United States Geological Survey reports indicate the depth of the bedrock is expected to be approximately 100 feet below ground surface. Based on local topography, groundwater most likely flows in the west-southwest direction toward the East River, located approximately 500 feet from the subject site.

Env Problem: Nature and Extent of Contamination: a) Contaminants - Based upon investigations conducted to date, the primary contaminants of concerns for the site include tetrachloroethylene (PCE), trichloroethylene (TCE), polychlorinated biphenyls (PCBs), lead, and polycyclic aromatic hydrocarbons (PAHs). b) Areal/depth extent - from the limited investigations performed in 2008 and 2009 the area and depth of the contamination has not been determined yet. c) Concentrations - The PCE concentrations in soil ranged from non-detect to 78,000 ppm; lead ranged from non-detect to 12,000 ppm. The PCE concentration in groundwater ranged from non detect to 72,000 ppb; the PCE concentration in the subslab soil gas was determined to be as high as 95,000 micrograms per cubic meter.

Health Problem: Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

1000171081

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: 3/28/05 - Austin - Reassigned from O'dowd to Rahman - received report from AKRF, dated March, 2005, entitled "Spill closure Investigation" for review - endAustin - transferred to Albany for reassignment - end 07/22/05- Called AKRF Inc., as consultant for the USA Waste Inc. to see if there is a spill closure report. S. Scharf09/16/05- finally got in touch with AKRF person. named Marc Godick (marc_godick@akrf.com)(914-922-2356 and 646-388-9534). Marc forwarded me the spill closure report for my review/closure. Review of spill closure report found that closure was acceptable. GW was tested seven years later and all results were below GW standards. Spill closed via letter on November 23, 2005. S. Scharf 11/29/05.Marc godickAKRF, INC34 South BroadwaySuite 3NWhite Plains, NY 10601914-922-2356 during removal of tanks found contaminated soil. At a later date, contaminated soils were reomved. Seven years later, GW testing revealed levels below GW standards.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

stated further investigation & possible remedial work recommended. Verify & conduct work or close site.6/28/07. J.Krimgold reviewed and approved IWP submitted by FPM Group (631-737-6200)on June 27, 2007. The plan calls for 4 soil/gw samples around tanks excavation pit5/21/08. email from FPM's Ben Cancemi informed that excavation and sampling activities will commence on 5/22/08.02/12/09-Hiralkumar Patel. contaminated groundwater (with sheen) was discovered under basement floor at 684 Lorimer Street, site located behind subject gas station. based on location of both sites, contamination under house at 684 Lorimer street might be originated from subject gas station site. based on recent findings, case transferred from DEC Jacob to DEC Patel.found following documents for the subject site:- tank closure environmental site assessment, Nov. 1999- subsurface investigation report, Feb. 2000- subsurface investigation work plan, Jun. 27, 2007- subsurface investigation report and remedial action plan, Sep. 10, 2007abstract of tank closure report, Nov. 1999:- total of eight 550 gal and one 3000 gal USTs were removed including all pipings and portions of pump islands- all of the tank in very good condition and exhibited no evidence of corrosion- five of the tanks were empty, and three tanks were filled with concrete- 3000 gal tank contained approx. 1300 gal of water and petroleum products- total of eight soil and water samples were collected after tank removal- depth to groundwater ranged from 14-16 ft bg <----- according to fire department record, in Nov. of 1984, the eight 550 gal tanks failed the official 10 year test- in sept. of 1985, three 550 gal were purged and filled with concrete- one pump was removed and all associated lines were sealed- highest PID readings were noted at an average depth of 10 to 15 ft <----- fine to medium sized grain sand with clay lenses were found to a level of 12 to 14 ft bg- a layer of one foot in thickness of peat-like material intermixed with clay occurred at about 16 ft bg- found xylene contamination in east and north sidewall samples- found contamination in groundwater samplesoil analyticals:-----XyleneNorth----4,600East----13,500groundwater analyticals:-----west bottom pit----east bottom pitBenzene-----160-----230Toluene-----200-----230Ethylbenzene-----97-----120Xylene-----1,410-----1,520Naphthalene-----390-----640MTBE-----1,900-----2,300abstract of subsurface investigation report, feb. 2000:- eight borings (B1 thru B8) were advanced and collected soil and groundwater samples from borings- borings B1, B2 and B5 thru B8 were advanced in the immediate vicinity of the former tank field and borings B3 and B4 advanced near the west property line- groundwater found at 10 ft depth- soil samples collected at 8-10 ft depth from each boring except boring B4 where no sample collected; additional soil sample collected from boring B1 at 0-4 ft depth- high PID reading found during borings- contamination found in soil and groundwater samplesPID readings:-----0-4-----4-8-----8-10B1-----1,120-----1,160-----1,190B5-----110-----20-----55B6-----2,010B7-----640soil analyticals:-----B1-----B1-----B6 0-4 ft 8-10 ft 8-10 ftBenzene-----<250Xylene-----25,000-----5,300-----1,2001,2,4-Trimethylbenzene--14,0001,3,

5-Trimethylbenzene---330-----170-----300---1,
700---7,200abstract of subsurface investigation report, Sep., 2007:-
four soil boring were installed to final depth of 15 ft bg- soils
encountered at the property generally consisted of fine to medium
grained sand with gravel and trace amount of silt and clay from just
below grade to the top of blue-green clay layer- the top of the
blue-green clay layer was evident in all of the borings at depths
ranging from approx. 12.5 to 14.5 ft bg- the blue-green clay layer
showed no indications of potential contamination and was not fully
penetrated by any of the borings- staining and petroleum odors were
generally observed in the soils from all of the borings in an
interval near the water table surface, which was generally
encountered at 8 to 8.5 ft bg- interval of staining/odor was variable
in thickness and ranged from approx. one foot at boring B4 to approx.
7 ft at boring B1- PID readings in stained soils generally ranged
between 10 and 60 ppm- groundwater samples collected from each
borings- no free-phase product was observed in any borings- found
contamination in soil and groundwater samplesoil

-----3001
,2,4-Trimethylbenzene-----1,500-----140-----4401,3,
5-Trimethylbenzene-----370abstract of remedial action plan, Sept.
2007:- proposed to excavate impacted soils in the vicinity of boring
B1- "based on relatively low levels of groundwater impact, its
apparently limited extent, and the apparent absence of free-phase
product, no groundwater remediation recommended"- three groundwater
wells are proposed to be installed for groundwater flow direction
determination- each well will be installed to a depth of no more than
14 ft, so as not to penetrate the clay underlying the property- each
well will be installed with 10 ft of screensummary:- groundwater
found at different depths: 14-16 ft during tank removal, 10 ft during
subsurface investigation in 2000 and at 8.5 ft during subsurface
investigation in 2007- no groundwater flow direction available- no

S102232676

Ben. abstract:- 186.34 tons of contaminated soils were excavated from southern portion of the former UST area and in proximity to the location of a reported former fuel dispensing island- two endpoint bottom samples and four endpoint sidewall samples collected from excavation- found some contamination in endpoint bottom sample from north end of excavation- additional soil was removed from the north end and collected additional endpoint bottom sample- sidewall samples were taken at 7 ft bg and bottom samples taken at 11 ft bg (means bottom endpoint samples were taken below water table)- three monitoring wells (MW-1 through MW-3) were installed in proximity to the former soil boring locations B1 through B3 (borings that done during subsurface investigation in 2007)- well MW-2 installed at previous boring B1 and MW-3 installed at previous boring B3- wells were installed to a depth of approx. 14 ft bg and completed with ten feet of screen- groundwater was found at around 8 ft depth <----- site-specific groundwater flow direction is to the northeast <----- no free-phase product or other visible indications of potential contamination were observed- found MTBE contamination in all three wells-----MTBEMW-1-----12MW-2-----150MW-3-----50report missing scaled site map.03/13/09-Hiralkumar Patel. spoke with Ben at FPM. asked him to submit scaled site map with all previous sampling/well locations. asked Ben about any dewatering as soil was removed from below water table also. Ben mentioned that water was coming into excavation so slowly. they were removing soil from excavation and wait till water from excavation bucket drain out before loading soil for disposal. so no dewatering happened.summary: during all previous investigations, highest contamination was found towards the west end of property, in close proximity to existing well MW-2. and MW-2 is the downgradient well at the property edge.based on results of high soil and groundwater contamination in area of MW-2 and groundwater flow direction, requires off-site groundwater investigation. requires off-site well downgradient from existing well MW-2.spoke with Mr. Joffe. explained him findings of previous investigations and asked him for one more well downgradient from well MW-2.sent letter to Mr. Joffe requiring delineation of possible soil and groundwater contamination, downgradient from well MW-2. letter emailed to Mr. Joffe and Ben.03/27/09-Hiralkumar Patel. received email from Mr. Cancemi with site map including location of proposed downgradient well.03/30/09-Hiralkumar Patel. received email from Mr. Cancemi. he is planning to install well on April 08, 2009. sent email to Mr. Cancemi approving proposed location.05/11/09-Hiralkumar Patel.1:35 PM:- received report from Mr. Cancemi. abstract:- off-site well installed (MW-4), about 20 ft downgradient from well MW-2- well installed to a depth of approx. 14 ft bg with 10 ft of screen- soil generally consisted of fine to medium-grained silty sand with gravel and trace amount of clay. brick, wood, coal, ash and concrete fragments were noted in the entire screen interval, but were more abundant in the top five ft of boring- faint petroleum odors and PID responses were noted on soils from 8 to 9 ft interval; no odor or PID noticed in other intervals- groundwater was found at approx. 7.5 ft bg <----- one soil sample collected just above water table and one at 8-9 ft depth (below water table)- no free product observed in any wells on site- groundwater flow towards northeast <----- 1,400 ppb of MTBE found in soil sample at 8-9 ft depth- 98 ppb of MTBE found in groundwater sample from MW-405/29/09-Hiralkumar Patel.10:46 AM:- sent letter to Mr. Joffe requiring surrounding area

site map (with possible off-site source) and quarterly groundwater monitoring and sampling for a period of one year (including wells gauging during each sampling events to define site specific groundwater flow direction). letter emailed to Mr. Joffe and Mr. Cancemi.09/24/09-Hiralkumar Patel.3:20 PM:- spoke with Ben. they submitted proposal to Mr. Joffe but hasn't heard back.3:22 PM:- spoke with Mr. Joffe. he will ask Ben to conduct groundwater sampling.09/29/09-Hiralkumar Patel.12:13 PM:- received email from Ben. he will sample wells on 10/01/09. he mentioned that previous samples were analyzed for VOCs only as gasoline spill was the cause. he asked whether SVOC analysis needed for groundwater samples.12:45 PM:- sent email to Ben to analyze samples for VOCs only.12/01/09-Hiralkumar Patel.3:26 PM:- spoke with Mr. Joffe. he spoke with Ben today. Ben is preparing report. asked Mr. Joffe to submit report by the end of 12/11/09.12/02/09-Hiralkumar Patel.11:20 AM:- received quarterly groundwater sampling report from Ben. sampled all four wells in Oct. 2009. minor MTBE contamination found in samples. will sample all wells again in Jan. 2010.12:42 PM:- sent email to Ben asking to submit next quarterly report by end of Feb. 2010. email copied to Mr. Joffe.12/11/09-Hiralkumar Patel.11:20 AM:- received email from Ben including site map showing surrounding area use.01/25/10-Hiralkumar Patel.3:41 PM:- received message from Daniel Cole (212-341-0964) from NYC DEP. he mentioned that subject site is e-designated and currently reviewing closure report. Mr. Cole wants to know spill status.01/26/10-Hiralkumar Patel.2:40 PM:- received email from Ben. they collected second round of groundwater sampling last week and will submit second quarterly report once lab data is available.3:06 PM:- spoke with Mr. Cole. Mr. Cole asked if DEC requires anything more than quarterly monitoring. informed Mr. Cole that the department may require additional work based on quarterly groundwater sampling reports. Mr. Cole mentioned that owner did air monitoring. asked Mr. Cole to send copy of air monitoring report. he will email the report.02/11/10-Hiralkumar Patel.8:23 AM:- received second quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 40 ppb). will sample wells in Apr. 2010.05/12/10-Hiralkumar Patel.1:56 PM:- received third quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 23 ppb, MW-4: 57 ppb). will sample wells in July 2010.08/05/10-Hiralkumar Patel.8:57 AM:- received fourth quarterly report from Ben. minor MTBE contamination found in groundwater samples (MW-3: 20 ppb, MW-4: 25 ppb).based on submitted documents, case closed.2:50 PM:- spill closure letter emailed to Mr. Joffe. email copied to Ben.

Remarks:

caller believes its a bad line - 5 - 550 gal tanks manifolded together

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that

1000351174

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

work outline was discussed with Bayside and Classic Fuel to clean up both the yard area and the street.08/10/06: This spill is transferred from Mr. Koon Tang to Q.Abidi.Called Pat at (718)372-9800 and talked to Ms. Dana regarding status of the spill. She said that when Mr. Pat will come she will find about it and she will convey my message to Pat. Mr. Pat will call me back. -QA09/22/06: On September 21, received a closing confirmation letter from Mr. Albert Cirino (Model Petroleum Transportation INC.). According to Mr.Cirino the spill was on concrete. No water and no land were contaminated by the spill. the spill is cleaned. Also talk to Bayside Terminal manager Mr. Sergio, He said they clean their yard. Also talk to Mr. John (718)388-1515 he said yard is asphaltand asphalt is sealed, it is not open dirt. John spoke on phone that they picked up each & every pocket of the product. so according to letter of Albert Cirino and Conversation with John and Terminal Manager Sergio DEC Staff closed the spill. -QA OVER FILLED WHILE FILING UP A TANK: CLEANED UP:

DEC Memo: 07/02/08 - LZARCADIS submitted a report dated June 26, 2008, documenting wells' decommissioning. 01/23/08 - LZAs advised by the Regional Spill Engineer, the spill case is closed and the presence of MGP contamination at the site referred to Gardiner Cross, Central Office, Remedial Bureau C, for further investigation. An NFA letter was sent out (eDods). 11/23/07 - ZielinskiARCADIS BBL submitted a report, dated November 13, 2007, containing groundwater analytical results of sampling conducted on October 17, 2007. A sheen was detected in MW-18 (an off-site well). Benzene was detected above groundwater standards limit (0.7 ppb) in twelve wells. The highest concentration was noticed in MW-14R (390 ppb), MW-11 (180 ppb), B-2 (110 ppb), MW-15 (34 ppb), MW-19 (35 ppb). Toluene was detected above the limit (5 ppb) in MW-11 (17 ppb), MW-14R (21 ppb), B-1 (16 ppb), and B-2 (11 ppb). Ethylbenzene was detected above the limit (5 ppb) in the following wells: MW-9 (5.7 ppb), MW-11 (9.2 ppb), MW-14R (35 ppb), MW-19 (29 ppb), B-1 (13 ppb), and B-2 (12 ppb). Total xylenes were

detected above the limit(5 ppb) in MW-9(20 ppb), MW-11(6.4 ppb), MW-14R(130 ppb), MW-15(8.4 ppb), B-1(46 ppb), and B-2(100 ppb).MTBE was detected above the limit (10 ppb) at MW-5 (11 ppb), MW-6(48 ppb), MW-12(79 ppb), and MW-14R(21 ppb).Acenaphthalene, naphthalene, benzo(a)anthracene, benzo(b)fluoranthene, and benzo(k)fluoranthene were detected above groundwater limits at MW-19(an off-site well). Acenaphthene was detected in MW-9 (20 ppb). 09/19/07 - ZielinskiA letter requesting a one round groundwater sampling for the presence of SOVs, SVOCs, and MTBE was sent to ARCADIS BBL. 09/06/07 -ZielinskiHistorical information on spill # 9804544, 1 North 12th Street, Brooklyn, NY August 28, 1997: well gauging, conducted for Star Enterprise, reveals 0.81 feet of free product in MW-10.October 30, 1997: in its letter to NYSDEC, Star Enterprise declares that it "will retain responsibility for cleanup of hydrocarbons existing at the facility, prior to the sale of the facility, " and will prepare a site investigation and remediation plan.November 1, 1997: Bayside Fuel Oil Depot Corp. purchases Texaco NY Terminal.November 1997: the removal of USTs at the site.January 16, 1998: sampling by Handex reveals the presence of free product in MW-10 (0.16 feet) , and contamination in MW- 6 MTBE (6,370 ppb) and naphthalene (21 ppb). May 1998: the Technical Analyses and Proposed Remedial Actions for Texaco Facility No. 58079, Brooklyn, NY, is prepared for Star Enterprise by Environmental Systems and Technologies, Inc. Findings: unsaturated zone thickness ranges from 2 to 12 feet; groundwater flows north-northeast toward the East River and the Bushwick Inlet; MW-10 (1.17 feet of LPH); MW-7 (0.04 feet of LPH); MW-6 MTBE (13,000 ppb), benzene (494 ppb); soil contamination below NYSDEC guidance values. Conclusions: the primary focus of remediation should be on removal of LPH and installation of additional wells at vicinity of MW-10.July 10, 1998: Star Enterprise notifies about a spill of an unknown cause, dated February 23, 1996; the spill receives No. 9804544.July 27, 1998: a Stipulation Agreement (SA), signed by Region 2 Regional Spill Engineer, provides that Texaco Refining and Marketing, Inc., is responsible for cleanup of the spill. The cover letter, however, indicates Star Enterprise as the respondent of the SA. The SA requires Texaco Refining and Marketing, Inc. submit a corrective action plan and quarterly progress reports. October 1998: an Investigation Report, prepared by Handex for Star Enterprise, shows results of sampling conducted on July 29, 1998; soil contamination was found near MW-13 (BTEX 754,700 ppb), no MTBE detected, TPH-DRO (Total Petroleum Hydrocarbons-Diesel Range) (2,800 ppm), THP-GRO (9,800 ppm); near MW-14 (BTEX 343,900 ppb), no MTBE, detected TPH-DRO (5,560 ppm), TPH-GRO (18,400 ppm). Groundwater contamination: MW- 10 (0.58 feet of LPH); MW-13 (0.09 feet of LPH); MW-6 BTEX (3,410 ppb). Depth to water: MW-11 (1.94 feet below grade); EPA-3 (7.51 feet below grade). November 1998: Handex prepares a report of behalf of Texaco Refining and Marketing, Inc., which reveals free product at MW-10 (0.40 feet) on September 22, 1008; and at MW-13 (0.67 feet) on September 28, 1998. The results of soil sampling; MTBE not detected, BTEX detected only near MW-16 (1.7 ppb) .January 19, 1999: since the results of investigation by Handex, submitted on November 4, 1998, indicate free product in the velocity of MW-10 and dissolved phased petroleum in the vicinity of MW-16, NYSDEC requests that Star Enterprise submit a proposed CAP in accordance with the SA.April 5, 1999: on behalf of Motiva Enterprise, LLC, Handex submits a remediation plan for the former Star Enterprises facility. The plan includes the use of enhanced fluid recovery (EFR) system, soil-vapor

1000351174

extraction , and removal of free product from MW-6, MW-10, and MW-13. The EFR events will be conducted once a month for six consecutive months. Groundwater samples will be collected twice a year from all wells where free product is not present. November 24, 1999: Handex is submitting, on behalf of Motiva Enterprise, a site status report. Groundwater sampling was conducted in May 1999 and EFR events conducted in May and June 1999. The EFR program was terminated because of the presence of LPH in MW-14 and MW-16. February 17, 2000: NYSDEC, reviewing the November 4, 1999, report determines that the CAP was not successful in the remediation at the site, as required by the SA. NYSDEC states that Motiva Enterprise has failed to submit a proposed plan to complete the cleanup. NYSDEC requests that Motiva Enterprise submit a progress report. July 27, 2000: on behalf of Motiva Enterprise, LLC, Handex submits a quarterly progress report which asserts that additional monitoring proposed in the investigation plan were not installed because of the presence of the underground utilities. Soil contamination shows exceedances of SVOCs near MW-17, MW-18, and MW-19 and the presence of free product in MW-10, MW-13, MW-14, and MW-16. August 20, 2001: a letter from Sclaro, Shulman, Cohen, P.C., reveals that NYSDEC agreed to the discontinuance of enhanced fluid recovery in June of 1999 after LPH appeared in MW-14 and MW-16. The letter informs that on April 22, 1999, NYSDEC approved the CAP submitted on July 16, 1998. December 17, 2001: Handex, on behalf of Motiva Enterprise, submits a semiannual monitoring report that reveals the presence of LPH in MW-6, 7, 10, 13, 14, 15, 18, and 19 (from traces to 0.60 feet-MW-10). Groundwater contamination was detected in MW-13 BTEX (7,706 ppb); B-2 MTBE (1,280 ppb). April 1, 2002: Anthony Sigona of NYSDEC in his memo informs that the current owner of the site (Bayside Fuel Oil Depot) has not been directly involved in the cleanup; the cleanup continues under direction of Equiva Services, LLC, which acquired Texaco Refining & Marketing; LPH have dropped to levels no greater than 0.1 feet; dissolved BTEX and MTBE are present. May 30, 2002: TransGas Energy applies for a Voluntary Cleanup Program assistance. The cover letter says that the site is adjacent to a former coal gasification or manufactured gas plant located on the south side of North 12th Street. August 20, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits results of June 25, 2002, groundwater sampling; LPH was observed in MW-7, 10, 15, and 16 with the highest number of 0.13 feet at MW-16. Detected groundwater contamination; MW-13 xylenes 93,040 ppb, benzene (2,120 ppb). August 22, 2002: a letter from Joseph Lentol, Assemblyman, Kings County District, asserts that Texaco merged with Motiva (most likely between July 1998 and August 2002); the DEC files do not reveal Motiva as the company responsible for the cleanup. September 25, 2002: Anthony Sigona of NYSDEC in his letter to Chevron Product Company indicates that since Chevron has merged with Texaco Refining & Marketing, Inc., NYSDEC will determine whether Chevron is authorized to implement the remediation project on behalf of Texaco. If so, Chevron is required--under the CA--submit a feasibility study and estimated cleanup schedule for approval. November 25, 2002: Blasland, Bouck & Lee, Inc., (BBL) on behalf of Chevron Environmental Management Company (CEMC) submits a corrective action plan. The plan evaluates remediation options: natural attenuation, soil vapor extraction or bioventing (installation of wells to pump air out or into the soil), and excavation and a number of remediation methods for excavated soil (disposal and treatment at an asphalt plant, thin spreading,

on-site or off-site thermal desorption, bioremediation/biopile remediation, and disposal in a landfill). BBL proposes the excavation (area 25'x50' extending about 2' into the water table, next to MW-10, 13, 14, and 16) and off-site disposal as the remediation method. December 27, 2002: NYSDEC approves a BBL corrective action plan of November 25, 2002, and its implementation schedule. January 8, 2003: a letter from Chevron Product Company informs that Chevron /Texaco Corporation assumes environmental responsibilities associated with Texaco Refining and Marketing, Inc., as a result of the merger on October 9, 2001. Attached to it a certificate reveals that Chevron Corp. has changed the name to ChevronTexaco Corporation. March 5, 2003: Randall Austin in his e-mail informs that during excavation of an UST-discovered recently at the site--strong odors were generated and entered an adjacent property, occupied by City Storage. As a result, 3 people were sick and 25 people were evacuated. The contractor covered the excavated area with plastic sheeting and overfilled it with clean sand. March 10, 2003: NYSDEC sends a letter to Chevron Products Co. requesting that because of excessive vapors present on March 5, the CAP must be modified and submitted for DEC approval. The modification must address containment of vapors from contaminated soil. March 11, 2003: Blasland, Bouck & Lee, Inc. (BBL), on behalf on Chevron Environmental Management Company submits November 2002 groundwater sampling and bimonthly gauging results. LPH were detected in MW-10 (0.02 feet); MW-16 (0.12 feet). Benzene was detected at B-1 (120 ppb); B-2 (45.3 ppb); MW-6 (72.4 ppb); MW-11 (70.6 ppb); MW-13 (1,800ppb); MW-14 (155 ppb). Toluene was discovered in B-1 (18.7 ppb); MW-13 (597 ppb). Ethylbenzene, total xylene, and MTBE were detected in B-1, MW-6, and MW-13. March 14, 2003: Windels, Marx, Lane & Mitterdorf, LLP, representing TransGas Energy Systems (TGES), LLC, sends to City Storage/ Citi Postal a Notice of Intent to Sue as a result of TGES's position that the Bayside property was polluted by significant amounts of waste from a former Manufactured Gas Plant (MGP)-a parcel that City Storage occupies. March 2003?: a drafted and undated letter by DEC Deputy Commissioner James Ferreira to Windels Marx, Lane & Mitterdorf, LLP, responds to their March 14, 2003, letter. Ferreira states that TransGas Energy Systems entered into a voluntary cleanup agreement with DEC to investigate and remediate the Bayside property. The property is also on DEC's "Addendum to Hazardous Substance Waste Disposal Site Study" of December 1998 , and is listed as B.U.G./Williamsburg Works site, presently owned by Keyspan. In response to a Notice of Intent to Sue, Ferreira addresses also alleged contamination of the Bayside property from MGP property, located on two parcels between North 11th and 12th Streets, and subsequent discharge into the Bushwick Inlet. He writes that the CWA allows for the initiation of citizen suits only for point-source discharges to the surface waters .Year 2003: a draft of an Order on Consent, R2-20030401-90(CO), indicates that Chevron Product Company, was the Respondent of this proposed CO. There is no proof that this order has been executed: a signed CO exists neither in the Regional Enforcement Coordination database nor in the DER's files. April 1, 2003: in its letter to NYSDEC, Chevron Environmental Management Company (CEMS) summarizes results of a meeting between these entities: NYSDEC will prepare a drafted consent order; April 7 is a deadline of a revised CAP, which include a method of sampling C&D debris stockpiled at the site; BBL will submit a review comments on a report prepared for TransGas Energy Systems to Shaminder Chawla of NYSDEC. April 2, 2003: on behalf of CEMS, BBL submits a revised

1000351174

corrective action plan. The plan provides that C&D debris will be disposed after analytical results are available; the UST will be left in place and abandoned. The excavation area will be capped and covered with cleanfill. Odors will be monitored by a PID meter in accordance with a Community Air Monitoring Plan. A summary report will be prepared. April 3, 2003: BBL reviews a TRC Environmental Corporation's (TRC) Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil site (former Chevron facility). BBL agrees to TRC's conclusions that a significant amount of coal tar and petroleum contamination migrated on the Bayside Property and impacted soil and groundwater. The depth of contaminated soil is limited to 13 feet or less. Shallow petroleum contamination is commingled with MGP contamination from the Williamsburg Works site. Deeper soil and groundwater are almost exclusively affected by MGP contamination. April 4, 2003: Anthony Sigona comments on the revised CAP and the Community Air Monitoring Plan (CAMP), prepared by BBL, dated April 2, 2003. Sigona writes that the CAMP must address vapor and dust suppression techniques; PID must be calibrated to 10 ppm for isobutylene, air monitoring must be recorded every 15 minutes at a number of locations. The revised CAP should include a schedule for submission of a site investigation plan in order to address any contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report for the Bayside Fuel Oil Site. April 25, 2003: BBL concurs with NYSDEC comments of April 4. May 2, 2003: a letter from Chevron Product Company, commenting on a drafted CO, denies its responsibilities for the spill and identifies Star Enterprise as the respondent. Also, Chevron doubts the bona fides of the Stipulation. According to Chevron, Star is responsible for surface contamination; deeper soil layers have been affected by the MGP. May 6, 2003: David Rubinton of NYSDEC responds to Chevron's letter of May 2, 2003. He rebuts a Chevron's claim that Texaco Refining and Marketing, Inc., was not the responder of the stipulation. Rubinton writes that the current Stipulation will have to be replaced and a Consent Order will be necessary. May 20, 2003: Anthony Sigona, in his letter to Chevron Products Company, approves a revised CAMP, dated May 13, 2003, upon inclusion of stringent levels of detectable hydrocarbons and monitoring of indoor air quality. May 22, 2003: BBL submits a CAMP, revised according to the May 6 NYSDEC comments. May 23, 2003: BBL sends to NYSDEC results of waste characterization sampling of the excavated C&D debris. None of the constituents analyzed were detected except for lead. May 23, 2003: Anthony Sigona requests that the CAP and the CAMP be implemented within seven business days. June 17, 2003: Deputy Commissioner, James Ferreira, responds to a citizen suit notice concerning alleged contamination from the Williamsburg MGP property affecting the Bayside site. The property is owned by Citi Storage/Citi Postal and Steinhardt Management /Fifty Kent Avenue Associates LLP. NYSDEC has plans to pursue Keyspan (the former owner) for the remediation of the property, located on two parcels between North 11th and 12th Streets. July 2, 2003: BBL submits a corrective action report, as required by NYSDEC in its letter of May 20, 2003. The report indicates that C&D debris had no excessive concentrations of SVOCs, VOCs. Only lead was detected at 0.91 ppm (TCLP limit is 5.0 ppm). C&D debris was disposed at CWM Chemical Services, Model City. The UST was left in place and filled with concrete slurry. The existing sheeting and sand cover remain in place. July 23, 2003: Chevron sends a letter to Sigona in response to his letter of July 14 (not in the DEC files). Chevron

indicates that the corrective CAP has been approved by NYSDEC. Chevron also responds to Sigona's request concerning the submission of a site investigation plan (to address petroleum contamination documented by the TRC Environmental Corporation's Phase II Baseline Environmental Assessment Report, dated December 2002). Chevron, before the submission of such a plan, needs to receive DEC's final comments concerning the TRC report. July 23, 2003: Sigona sends a commentary letter in response to Chevron today's letter. He says that while NYSDEC recognizes that there is evidence that coal gasification waste might have migrated onto CPC 's former site; there is also evidence that CPC or its predecessors have discharged petroleum at this site. By August 1, 2003, CPC must submit a proposal for additional borings and well installations as well as Remedial Investigation Work Plan in accordance with DER-11. Section 3, Paragraph 3.3. August 29, 2003: BBL submits a Site Investigation Plan for the former Star Enterprise facility, in accordance with DEC Stipulation Agreement, dated July 27, 1998. The investigation will be conducted according to DER-10 and a site-specific Health and Safety Plan/Community Air Monitoring Plan(approved by NYSDEC on April 2, 2003). The plan includes test borings, soil analyses, well installations, and groundwater samplings. September 10, 2003: Sigona sends comments to Chevron Product Company concerning BBL's Proposed Site Investigation Work Plan, dated August 29. NYSDEC requires that the results of the proposed BBL Work Plan be implemented in accordance with an approved schedule referenced in an executed Order on Consent (not in DEC files). April 14(?), 2004: commenting on the CAP, dated April 15, 2004, Sigona requests that Chevron submits a revised CAP by June 30, 2004, including a justification for a manual gauging and bailing instead of selecting of other remedial strategies. Earlier, NYSDEC decided to cease temporarily high-vacuum extraction events in order to investigate alternative remedial strategies. August 12, 2004: Blasland, Bouck & Lee, Inc., (BBL) on behalf on Chevron Product Company sends a revised Corrective Action Plan. Anthony Sigona approves the PSH Recovery Plan. A final remediation report must comply with DER #10; quarterly groundwater monitoring must contain petroleum constituents, dissolved oxygen, pH, alkalinity and hardness. September 16, 2004: Chevron Environmental Management Company sends a letter to NYSDEC summarizing the results of agreement between NYSDEC and Chevron on future environmental response actions at the site. BBL, the Chevron consultant, will perform bimonthly bailing and recovery of PSH; BBL will prepare an Exposure Assessment, focused on shallow zone impacts associated with the site (less than 20 feet below a land surface) by the end of year 2004. A one round of groundwater samples, including BTEX and MTBE ,will be included in the Exposure Assessment. December 27, 2004: BBL submits results of the September 2004 groundwater sampling conducted at 20 monitoring wells. Benzene was detected in B-1 (100 ppb); MW-1 (6 ppb); MW-5 (2 ppb); MW-6 (41ppb); MW-8 (61 ppb); MW-9 (9 ppb); MW-12 (3 ppb); MW-14R (380 ppb); MW-15 (120 ppb); MW-18 (31 ppb); MW-19 (59ppb). Toluene was detected in B-1 (15 ppb); MW-9 (16 ppb); MW-14R (57 ppb). Ethylbenzene was detected in B-1 (16 ppb); MW-9 (45 ppb); MW-14R (110 ppb); MW-18 (140 ppb); MW-19 (63 ppb). Total xylenes were detected in B-1 (64 ppb); MW-9 (45 ppb); MW-14R (280 ppb); MW-15 (11 ppb); MW-19 (10 ppb). MTBE was detected in MW-6 (67 ppb). PSHs were observed in EPA-3 (sheen); MW-9 (0.01 feet); MW-11 (film); MW-12 (film). Conclusions; four wells contained detectable PSH; the plume is stable and has been delineation to the central

1000351174

portion of the site; natural attenuation is occurring on the site. December 27, 2004: the Human Health Exposure Assessment, prepared by BBL, concludes that BTEX and MTBE are present in groundwater at concentrations exceeding NYSWQS. However, the groundwater at this site is not potable, and potential exposures would most likely be limited to direct contact with groundwater and inhalation of indoor air vapors. Potential exposure encountered during excavation could be mitigated through the use of properly trained personnel and protective equipment. Since available soil and soil vapor data is limited, they have not been evaluated. September 2, 2005: BBL submits a report on the second quarter 2005 bimonthly gauging as specified in the DEC-approved CAP. No SPH was detected in any of 21 monitoring wells during any of 8 gauging events. January 31, 2006: BBL submits a report on the bimonthly gauging as specified in the DEC-approved CAP, from August 2005 through December 2005. PSH was detected in MW-18 on December 8, 2005 (0.01 feet); 21 wells were gauged during 9 events. August 7, 2006: BBL submits a report on the twice-a-month gauging from January 2006 through March 2006; 21 wells were gauged on 5 occasions; no PSH was detected. October 6, 2006: BBL sends a report concerning gauging from April 2006 to July 2006; 21 wells were gauged, and no PSH was detected on any of 8 events. Chevron Environmental Management company proposes quarterly gauging and twice-a-year reporting. November 7, 2006: BBL, an ARCADIS Company, submits a report on the twice-a-month gauging as specified in the DEC-approved CAP, from August 2006 through September 2006; 21 wells were gauged on 4 occasions; no SPH was detected. December 14, 2006: Leszek Zielinski of NYSDEC approves the semiannual gauging and groundwater elevation measurements. The absence of PSH had been observed since December 8, 2005, when 0.01 foot of free product in Well MW-18 was found. The data sufficiently demonstrates that asymptotic conditions have been reached. The department approves BBL's request to perform quarterly gauging of the monitoring wells for the presence of PSH. Similarly, the department approved a request concerning the semiannual reporting on a groundwater elevation and a PSH thickness at these wells. January 4, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from October 2006 through December 2006. PSH (0.09 feet) was detected in MW-18 on December 11, 2006. 21 wells were gauged during 5 events. August 22, 2007: ARCADIS BBL submits a report on the bimonthly well gauging from January 2007 through May 2007. PSH was observed in MW-06 (0.01 feet) in February 2007; MW-18 (0.01 feet) on February 8, 2007, and (0.01 feet) on May 15, 2007. Wells were gauged 4 times in this period. Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO" This site cleanup has been consolidated under Spill No. 9804544. On July 16, 1998, DEC SIGONA RECEIVED PROPOSED site investigation plan. Letter sent to STar Enterprise on 7/17/98 approving plan. Stipulation Agreement sent to Star for signature on 7/10/98. In response to a complaint over elevated vapors on March 5th, 2003, filed under Spill Investigation No. 0211984, the DEC issued a verbal Order to Cease and Desist all remedial activity at the site pursuant to the Blasland, Bouck & Lee, Inc. (BBL) corrective action plan (CAP), dated November 25, 2002. The DEC confirmed that the excessive vapors generated by the excavation of petroleum contaminated soils at the site under the November 25th CAP, were shown to impact worker health and safety at the affected site at CitiStorage. As a direct result of these vapor problems associated with the implementation of the November 25th, 2002 CAP, the DEC has determined that it has become necessary to

Remarks: modify of the CAP conditionally approved by DEC in a letter to CPC, dated December 27, 2002. The CAP must now be modified to continue to satisfy paragraph III of the DEC's Stipulation Agreement with Texaco Refining & Marketing, Inc., dated July 27, 1998. DEC's comments regarding Blasland, Bouck & Lee, Inc. (BBL) revised Community Air Monitoring Plan (CAMP), dated May 22, 2003, to address emission of odors, vapors and dust during the remedial work proposed in the revised CAP. The DEC accepts the proposed CAMP which has addressed the comments in our May 20, 2003 letter to CPC. CPC must now implement the Blasland, Bouck & Lee, Inc. (BBL) revised corrective action plan (CAP), dated April 2, 2003, and revised CAMP, dated May 22, 2003.4/22/2004 - Spill case is reassigned to Zhao.
Ground water monitoring revealed the presents of petroleum in groundwater star enterprise is developing a remediation plan with DEC (Sigona).

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"10/10/95: This is additional information about material spilled from the translation of the old spill file: CONTAM MONITORING.402 Metropolitan Avenue, BrooklynOwner: Estate of James J. Mannix and Joseph M. MattonLeased by: Joseph Macchia - Northland MarketingSpill #8907310 reported on 10/24/89 when four 550 gallon underground storage tanks (USTs) failed a tank test.Spill #9212269 was reported on 1/28/93 when Soil Mechanics (hired by the Estate of James Mannix and Joseph Matton) installed three on-site monitoring wells and encountered 3 1/4 feet of gasoline in MW3.Spill # 9213355 reported on 3/2/93 when six 550 USTs failed a tightness test. Repairs were made to the stick box and vent lines and the tanks passed a retest on 4/2/933/9/93 Case No. R2-0941-93-03 initiated.12/6/94 Order on Consent No. R2-0966-93-03 signed by Joseph Macchia. All three spill numbers cited in Schedule B - Petroleum Discharge and Clean-Up Violations.After the signing of the Consent Order, Macchia contracted Berninger Environmental as their consultant. Including the three wells installed by Soil Mechanics, there is now a total of thirteen monitoring wells both on and off-site. The site is currently on a monthly monitoring and bailing schedule. According to the February 2001 Monitoring Report, the hottest well is MW-3 (in the middle of the property, downgradient of the tank mat) with a total of .97 feet of floating product. The report also indicates that a total of 304 gallons of free product has been bailed from the site wells during these monthly visits.In numerous meetings and letters dated 8/12/98 and 1/22/99 and 9/30/97, DEC required Northland to periodically perform Vacuum Enhanced Fluid Recovery (VEFR) until the tanks are removed and a permanent remediaton system installed. According to DEC's file, VEFR was only performed on five occasions with a total of 267 gallons of free product recovered. 9/12/03Letter mailed to Joe Macchia requiring additional investigation and remediation. 09/23/03Reassigned from Rommel to Sun.02/12/04-Sun-File Update by Sun:-On 09/22/03, Joe Sun sent and also faxed a letter and Stipulation Agreement to Joseph Macchia, Jr. of Northland Marketing Corp. requesting complete delineation of petroleum contamination, submittal of Investigation Summary Report followed by a submittal of a Remedial Action Plan. The investigation must include, but not limited to the following: (1) Confirm groundwater flow direction by surveying site wells, (2) Install additional wells to delineate the contamination to the west, (3) Implemenmt a sampling program, on a quarterly basis, for all non-product monitoring wells and analyze for

EPA Method 8270 B/N and 8021 including MTBE, (4) Determine the type of product in MW-9 via product ID analysis, (5) Repair MW-3. Currently the cap for the 2" PVC casing cannot be placed due to insufficient clearance between top of casing and its manhole cover. The PVC casing needs to be shortened. The Department set a deadline of October 3, 2003 for signing of the Stipulation Agreement by the Respondent. -Monthly Monitoring Report (January 2004, by Berninger Environmental, Inc. (Water Berninger, 631-588-2251): The monitoring wells were gauged on 12/22/03. The free phase products were detected on three monitoring wells: 0.59 feet on MW-1, 0.93 feet on MW-3 and 1.20 feet on MW-6. Snow/ice covered the following monitoring wells: MW-7, MW-8, MW-12 and Mw-13, and thus those wells were not gauged. Consultant's Report stated that " it appears that other contractors are working on site, areas fenced off with locked gates, thus denying access to monitoring wells, for at least the sixth time drum for bailing product is missing, various utility mark outs, missing well designation markings etc." -02/12/04-Joe Sun called the Manager of the current Used Car4 Services on-site (Alex Tulchistka, 718-388-2424) about what kind of construction activities are being performed onsite. He replied that no new construction activity is performed and no fence or locked gate was installed onsite as far as he knew. Joe Sun then called Walter Berninger again and informed him the conflict information from the Car Service Manager. Berninger will take the picture next time when they perform the monitoring activity and provide more details on gauging the monitoring wells. 12/30/04 File Update by Sun: On 12/21/04, Joe Sun mailed a letter to Kenneth Raisch and Christopher Todd of The Estate of James Mannix and Joseph Matton informing them that the Remedial Action Plan (RAP) submitted by their consultant, Advanced Site Restoration (ASR) has been reviewed by the Department and has the following comments: - ASR proposed two remedial approaches for managing the petroleum-contaminated soil to be excavated on site. The first approach, transport off-site and proper disposal, is approved by the Department. The alternative, stabilization/solidification approach, is not approved as proposed. If ASR still wishes to pursue this approach the Department has the following comments and requirements which need to be addressed and a revised RAP needs to be resubmitted for review: 1. To evaluate the effectiveness of the proposed remedial process on the subject site, the horizontal hydraulic gradient at the site must be determined, and the hydraulic conductivity and porosity of the soil must be estimated. The seepage velocity and direction of the ground water flow must be calculated. 2. Redraft the "Soil Remediation" section (page 5) for clarity, and refer to the product as "cold mix asphalt" as is done in the applicable Beneficial Use Determination (BUD) approvals. 3. The use of the term "cement based" (page 6, second to last paragraph) is potentially confusing. The 2001 amendment to BUD Approval 93-0007 allows for the addition of Portland Cement to improve the physical properties of the product, but the petroleum contamination is still stabilized with asphalt emulsion. 4. The sampling schedule required by the BUD (sampling method, analytical method, number of samples and timing of samples) should be tabulated and included in the RAP. 5. The proposed uses for the cold mix asphalt (see page 6, second to last paragraph) are not consistent with the BUD (see 2001 amendment to BUD Approval 93-0007, Operational Requirements, bullet 2). Use of this material as a substitute for conventional asphalt pavement would be a more appropriate application. The Department has the following comments regarding the

402 METROPOLITAN AVE. (Continued)

S100494817

proposed free product recovery and groundwater remediation. These issues must be addressed in the revised RAP:1.Provide the formula used to calculate the amount of BioRem required.2.The plan to periodically re-inoculate the site with BioRem is troubling. If conditions are suitable for the constituent bacteria in BioRem to grow, re-inoculation would be unnecessary. If conditions are unsuitable for growth, the addition of more of the same bacteria will not change things. BioRem should be contacted to learn the optimum conditions for growth, and the acceptable concentrations. A sampling plan to determine if conditions on the site are within these ranges should be provided for review. BioRem should also provide information about the terminal electron acceptors utilized by their proprietary bacteria so the attenuative capacity of the site can be estimated, and compared to the concentration of residual contamination. This comparison is best done with TPH data, rather than the STARS list of compounds for gasoline spills that is usually requested.3.There is a potential for LNAPL to be present in areas outside the limits of the proposed excavation. If this is confirmed, depending upon the estimated amount of LNAPL, another technology in addition to BioRem may be required for remediation.4.The 8 to 18 month time frame allotted for bio-remediation is considerably longer than the 7 to 14 weeks stated in the BioRem H-10 Specification Sheet. A soil and ground water monitoring plan to track the bio-remediation should be developed, and included for review in the re-drafted RAP 5.The RAP should have a provision that samples will be collected and analyzed at the discretion of the ASR site supervisor (see page 9, second to last paragraph) or the direction of the DEC project manager.6.If soil excavation does not commence soon after the product is removed from the wells with the vac-truck, the wells should be monitored daily for free product and the vac-truck recalled when appropriate.03/01/05 File Update by Sun: On 02/28/05, Sun sent a letter to the property owner informing him that the Department has reviewed the revised remedial action plan (RAP), prepared by Advanced Site Restoration, LLC dated February 17, 2005. ASR proposed to excavate the contaminated soil and dispose of property off-site and use Bio Rem product H-10 for subsurface bioremediation of hydrocarbon contamination in groundwater. ASR also proposed to remove the free product with a vacuum truck if free-floating hydrocarbons are detected. The Department approves the revised RAP proposed in Reference 1, as noted below: 1.Collection of Soil Samples: As per DER-10 Section 5.4, soil samples must be collected from the bottom of each sidewall for every 30 linear feet of sidewall and one sample from the bottom for every 900 square feet of bottom area. In all cases, samples should be biased toward locations of highest expected contamination as indicated by field evidence or PID measurements. 2.Salvage of Existing Groundwater Monitoring Wells: Page 4 of the revised RAP in Reference 1 under Section 5.0 "Groundwater Remediation" stated that "ASR will attempt to salvage any groundwater observation wells still existing on the site. If addition wells are needed, they will be installed strategically, to maximize the data that can be obtained." It should be noted that according to the historical data, free product was detected in monitoring wells MW-1, MW-3, MW-6 and MW-11. These four monitoring wells and other existing wells must be restored at the same locations or at the locations to be consulted with the Department if they were destroyed during excavation.11/11/05: Sun received UST Closure Report for the subject site, dated 11/07/05.11/23/05: Review of the monthly report dated

10/19/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb, and MTBE ranged from <NDL to 6,300ppb. A total of 16 Monitoring wells were gauged and sampled. Only one well (MW-11) had free phased product with thickness of 0.23 feet. (Sun)12/13/05: Review of the monthly report dated 11/10/05 indicated that Total BTEX ranged from <MDL to 20,900 ppb (October, 2005), and MTBE ranged from <NDL to 6,300ppb (October, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.49 feet. (Sun)02/21/06: Review of the monthly report dated 02/10/06 indicated that Total BTEX ranged from <MDL to 13,060 ppb (December, 2005), and MTBE ranged from <NDL to 10,000ppb (December, 2005). A total of 16 Monitoring wells were gauged and sampled. Only two wells (MW-11 & MW-12) had free phased product with max thickness of 0.27 feet. (Sun)11/14/06-Sun: Based on the Quarterly Report, dated 9/11/06, BTEX ranged 5,258 to 11,180 ppb, and MTBE ranged from 170 ppb to 8000 ppb. (Sun)04/13/07-Sun: Sun the following email to Chris Tomasello: Hi Chris, I have reviewed the Remediation Progress Report, submitted by ASR, dated January 2007. The Department approves the following recommendations: 1. Stop sampling MW-4, MW-5, MW-6, MW-8, MW-10, MW-12, MW-13, and MW-16. 2. Continue to sample and monitor the remaining groundwater monitoring wells for VOCs only using EPA 8260 method. 3. Continue to monitor the concentrations of BTEX, MTBE, and Total VOCs from MW-1, MW-2, MW-3, MW-11, and MW-14. 4. Continue to monitor the plate counts to determine the colony count for the bacteria. Upon review of the analytical results of new round of groundwater sampling data, the Department will determine if quarterly sampling event shall continue or petition for a NFA is warranted. The Department requires five days advanced notice of any remedial and/or monitoring events at the site. (Sun)07/17/07-Sun: Review of the Remediation Progress report dated June 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that a total of five (5) groundwater monitoring wells were sampled on 5/2/07. Of the five (5) samples analyzed, four (4) indicated a total BTEX concentration of between 150 and 6,700 parts per billion (ppb), and the remaining one (1) well had total BTEX concentrations of non-detect level. MTBE was detected above the New York State Water Quality Standards in two (2) of the five (5) groundwater monitoring wells. The concentration of the MTBE in both of these two (2) groundwater monitoring wells, was the lowest ever recorded during the twenty month samplin period. High levels of dissolved hydrocarbons have historically been detected in MW-14. MW-14 continues to show the highest levels of dissolved hydrocarbons, although they are at the lowest levels recorded during twenty month history of sampling the site. Low levels of dissolved hydrocarbons also appeared in MW-1, MW-2, MW-3. AST proposes to monitor the concentration of BTEX, MTBE, and total VOCs by collecting and analyzing groundwater samples from MW-1, MW-2, MW-3, MW-11 and MW-14. ASR will continue to monitor the heterotrophic plate counts to determine the colony count for the bacteria. ASR will continue to document the downward of the residual contamination, to demonstrate that concentrations will continue to acceptable TAGM 4046 Groundwater Standards. 07/20/07-Sun: Review of the groundwater sampling report dated July 14, 2007 prepared by Advanced Site Restoration, LLC (ASR) indicated that the groundwater sample collected from MW-14 wells on 7/12/07 indicated a total BTEX concentration at 318 parts per billion (ppb), including Benzene concentration at 52 ppb, and MTBE concentration at 340 ppb. MW-14 has been historically the hot spot with highest BTEX and MTBE concentrations. Based on these low

 DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY" TRANSFERRED FROM Y.KRIMGOLD.8-3-2005 Reviewed report received by NYSDEC on June 13, 2005. The report stated that free product is present in wells MW-2 and MW-4. Petroleum absorbent socks have been replaced several times in both wells. Also, the report stated that in July 2001, laboratory analysis identified the product as kerosene. In addition, the report stated that the most likely off-site source is the upgradient neighboring property, which was known to have underground storage tanks. A letter was sent to DDC/URS to inform the City that at NYSDEC request, an investigation was performed at the neighboring property (Spill #0130048, 407 Leonard Street). The investigation results showed no signs of contamination and the spill report for that property was closed. Therefore, the Department requested that DDC/URS repeat the fingerprint analysis of the free product in wells MW-2 and MW-4, and investigate alternative sources for the free product contamination. AZ9-28-2005 Staff received and reviewed a monitoring report from the City's contractor which stated that free product is present in several wells. The report suggested that the most likely off-site source is the up-gradient neighboring property, which has underground storage tanks. Staff

S102619299

responded that an investigation was performed, at DEC's request, at the neighboring property (Spill #0130048, 407 Leonard Street). The investigation results showed no signs of contamination and the spill report for that property was closed. Staff asked the City to repeat the petroleum fingerprint analysis to help determine the source of the product. This analysis indicated that the product is likely kerosene. Although kerosene tanks were never present at the site, NYFD has practice of mixing kerosene and diesel fuel. There is a diesel AST in the basement of the facility. Staff asked Jane Staten (URS) to investigate the possibility of leakage from the diesel AST into the subsurface through underground lines or other conveyances. AZ9/26/2006 The site was transferred from URS to Greyhawk on January 1, 2006. In July 2006 Greyhawk reported that due to the lack of documentation from the previous CM, Roux performed a reconnaissance visit to the site. Eight of nine monitoring wells were located and gauged. MW-08 was probably destroyed during ongoing construction activities at the neighboring property. MW-04 continues to contain free product at 0.16'. Absorbent socks in wells MW-04 and MW-02 were replaced. AZ12-07-2006 Staff received and reviewed a monitoring reports from Roux dated September 22 and November 20, 2006. November report states that Gw sampling was not conducted for April through June 2006 because Greyhawk mistakenly considered the spill closed. Free phase (kerosene) was detected in MW-02(0.03') and MW-04(0.23') during July-September quarterly monitoring event. MW-08 could not be located. Roux recommended reduce frequency of gw sampling and reporting from quarterly to semi-annual since dissolved phase remains only in MW-09, continue quarterly gaging of wells, continue using absorbent socks, conduct additional investigation to determine potential sources of kerosene product (work plan will be submitted to DEC), attempt to locate MW-08. DEC concurred. MW-08 should be located or replaced. AZ12/22/2006 At the meeting with DDC/Greyhawk on 12/12/2006 DEC inquired about the remedial progress at this site. Greyhawk will advance a few borings to resolve this issue. They will submit a work plan. AZ2/13/2007 An e-mail was sent to DEC/Roux: "Roux recommended reducing frequency of groundwater sampling to semi-annual at this site. Also, Roux proposed that well MW-08 should be located and sampled in their November 2006 Report. As far as I know, MW-8 has not been located. Well MW-8 should be located and sampled. When sampling results from MW-8 are submitted to DEC, frequency of groundwater sampling will be reviewed." AZ2/14/2007 Telephone conversation with Brian Morrissey on 2/13/2007: Brian informed me that MW-8 was last sampled in 2002 and exhibited 15 ppb of total VOC. This information was not included in Roux's quarterly report. Based on this information I approved Roux recommendation for semi-annual groundwater sampling. However, due to the presence of free product at this site, groundwater sampling schedule should be restored to quarterly if dissolved phase contamination appears in more wells. An e-mail was sent to Brian Morrissey (Roux). AZ6/21/2007 Reviewed report for the site dated April 11, 2007, and received on April 26, 2007. Roux recommended conducting additional site investigation to determine potential sources of kerosene. They proposed collecting soil and gw samples from borings in the alley located between the firehouse building and the adjacent property's degreasing pit. No permanent wells were proposed. UST near Leonard Street belongs to what site? I left a message for B. Morrissey (Roux) asking clarification for the work plan. AZ6/22/2007 Conversation with Brian Morrissey regarding the proposed Work Plan. I rejected the proposed

ENGINE CO. 229 FDNY -DDC (Continued)

S102619299

Work Plan since it did not propose any permanent well installations. Also, I consider, that number of soil borings is excessive. Two wells should be installed in place of proposed boring RXSB07-RXSB09. Also, two wells should be installed between the degreasing pit and the potential site of previous USTs. MW-8 should be either located or re-installed. I requested information regarding diesel fill ports, gasoline fill ports and previous USTs depicted on the plan. Do they belong to the Fire Department or to the adjacent property? Roux will submit a revised work plan and the requested information. AZ2/11/2008 An e-mail was sent to Roux/DDC/VB/Greyhawk: "I have reviewed Semi-Annual Monitoring Report for the above site submitted in November 2007. The report included the revised Work Plan. However, DEC comments were only partially taken into account. DEC requested installation of two wells between potential site of the previous USTs and the degreasing pit. These wells were not proposed by Roux. Also, DEC requested information regarding ownership of the diesel fill ports, gasoline fill ports and previous USTs depicted on the plan. This information has not been provided to DEC. These deficiencies should be corrected and modified Work Plan with the requested information submitted to DEC. AZ2/12/2008 Conversation w/Brian Morrissey (Roux). Brian suggested installing two wells in the alleyway as the first step in the investigation. After these wells are installed and sampled, a decision will be made by DEC regarding installation of two additional off property wells at the adjacent property as per DEC's previous request. Also, Roux will provide DEC with the information regarding UST locations at EC 229 property and information regarding the ownership of the former USTs as well as diesel and gasoline fill ports in conjunction with the first stage of the investigation. AZ10-31/2008 An e-mail was sent to Roux/DDC/Greyhawk/V.B.: "I have reviewed Semi-Annual Monitoring Report for the above site for the period of July 2007 to June 2008 and dated August 4, 2008. Based on the report, the additional site investigation, approved by DEC in February 2008, has not been performed. The submitted investigation plan is approved and should be performed without delay. After proposed wells/borings are installed, a decision will be made by DEC regarding installation of two additional off site wells at the adjacent property as per DEC's previous request. According to the PBS records, a 2,000 gallon fuel oil tank was closed in place at the site. A 550 gallon diesel tank is in active status at the site. Locations of these tanks and their fill ports should be indicated on the plan. Also, location of 275 gallon gasoline tank fill ports should be indicated on the plan." AZ12-21-2009 Additional investigation work plan approved by DEC on February 11, 2008, February (ASIWP) has not been performed. According to Roux it will be performed by the incoming construction management firm. Intermittent kerosene product is observed in MW-4 and MW-02. An investigation REQUESTED BY NYSDEC (Spill #0130048, 407 Leonard Street) DEC determined that product in MW-2 and MW-4 doesn't appear to be from this potential upgradient source. Roux will continue to use absorbent socks. AZ8-25-2010 An e-mail was sent to LiRo S. Frank: "I have reviewed Site Turn-Over Status Report. Result of the additional investigation which was approved by DEC should be sent to the Department. Well MW-01 could be removed from the sampling program. Wells M-06 and MW-07 should be replaced." AZ12-21-2010 An e-mail was sent to LiRo S. Frank, V. Brevdo, F. Ashkan: "Dear Steve, I have reviewed semi-annual sampling/quarterly monitoring and additional investigation report for this site. The report proposed

Map ID

ENGINE CO. 229 FDNY -DDC (Continued)

S102619299

continuation of sampling and adding SVOC analysis to groundwater sampling protocol. Also, report suggested hot spot shallow excavation at boring RXSB-04. These proposals are approved. LiRo recommended removal of wells MW-01 and MW-07 from the sampling program and reduction of gauging to semi-annual, since product has not been observed since 2008. These recommendations are approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan." Elevated levels of soil and dissolved groundwater contamination exist at this site. A series of 11 injection wells were installed at the site. PermeOx slurry was injected in each well. Consultants submitted additional site investigation plan which has been approved by DEC. In June 2010 LiRo performed the revised Additional Revised Investigation Plan. Elevated PID readings and petroleum odor was noted in all seven borings mainly between 5 and 15 ft. bgs. VOC and SVOC concentrations exceeded TAGM soil guidance. Contamination is present just above and at the groundwater table interface. LiRo recommended conducting hot spot shallow excavation to remove VOCs in soil. DEC approved this recommendation. AZ 6-28-2011 Reviewed report for the site dated March 31, 2011. Soil samples collected indicate shallow SVOC contamination above and at groundwater table. Soil below gw table do not indicate contamination. LiRo proposed to conduct hot spot excavation at boring RXSB-04 and DEC approved it in December 2010. Free phase product was detected in RXMW-01 (0.01') and MW-04 (0.22') in November 2010. The product was identified as gasoline. Due to the presence of free phase, quarterly gauging will be conducted. Monthly vacuum truck extraction in wells MW-02, MW04, and RXMW-01 will be conducted for a period of 3 months. AZ1-9-2012 Reviewed semi-annual report dated October 5, 2011. The shallow ho spot excavation approved by DEC on Dec. 21, 2010 in the vicinity of boring RXSB-04 is scheduled for completion in Fall/Winter 2011. The following email was sent to S. Frank/ F. Ashkan and V. Brevdo: "Dear Steve, I have reviewed semi-annual/quarterly report for February- September 2011 and dated October 2011. The report stated that measurable product was detected in MW-04 and was ranging from 0.01 to 0.03 feet. Currently petroleum absorbent socks are in three wells. LiRo proposed reducing groundwater sampling from semi-annual to annual. Due to the presence of free phase product this proposal is rejected. Sampling should be performed semi-annually. Also, LiRo proposed to remove several monitoring wells from the site monitoring program. The site is monitored only twice a year. The wells proposed for removal exhibited VOC contaminants in the past and located in important monitoring locations. Therefore, these wells should be monitored. LiRo proposed suspending SVOC analysis. This proposal is approved." AZ12-6-2012 Reviewed semi-annual monitoring report dated June 26, 2012. The report stated that elevated VOCs above RSCO were detected in boring RXSB-04 from 5' to 6'. Free phase product is intermittently reported in wells MW-02, MW-04, RXMW-02. Product removal has been accomplished by both EFR and absorbent socks. LiRo will submit an excavation bid package for excavation in the vicinity of boring RXSB-04 in the third quarter of 2012. AZ

Remarks:

DURING TANK CLOSURE - SOIL SAMPLE HAS BEEN TAKEN AND THEY RECIEVED POSITIVE PID ON ONE SAMPLE

Site Description: This site lies underneath the elevated Brooklyn - Queens Expressway (I-278) along Meeker Avenue between Metropolitan and Union Avenues in the Williamsburg Section of Brooklyn. It is believed that during the construction of the BQE, waste material and debris from the former Ansbacher Color & Dye Factory may have been used as fill material in the project area. A Phase II - type investigation was conducted by the New York State Department of Transportation in 1988. The investigation found hazardous levels of arsenic and lead in the soil and elevated levels of arsenic, lead and cyanide in the groundwater. During the reconstruction of the BQE in the early 1990s, the NYSDOT completed an IRM (soil removal) within the project's right-of way. The remaining contaminated soil is located beneath asphalt and concrete. A Preliminary Site Assessment was completed during the summer of 1999 to evaluate the areas outside the BQE footprint. The sampling results indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals, but the contaminated groundwater has not migrated significantly beyond the footprint of the former factory. Not reported

Env Problem: The primary contaminants of concern at this site are arsenic, lead, mercury and cyanide. Investigations indicate that the subsurface soils within the footprint of the former Ansbacher Plant contain elevated levels of arsenic, lead, and mercury. The groundwater in this area is also contaminated with these metals. The site does not constitute a

Health Problem: significant threat to the environment as the contaminated soil is covered by existing layers of asphalt and concrete, and the contaminated groundwater has not migrated significantly beyond the footprint of the former factory.

Residual arsenic and lead contamination remain under the BQE and is covered with several layers of concrete and asphalt, thereby preventing direct contact. Contaminated soil also underlies several on-site buildings formerly used by Ansbacher. Groundwater in the area is not used, since public water is available. Off-site sampling of surface soils from residential yards adjacent to the site indicated the presence of metals (particularly arsenic and lead) at concentrations above the range of concentrations typically encountered in urban neighborhoods. However, the exact source of the metals in the soils could not be determined from the data collected. The NYSDOH gave the residents advice on how to minimize their exposure to these surface soil contaminants.

She wanted to fax it at 1-718-486-6862. DEC Faxed the letter as requested. Kuldeep discussed with Philip Lodico Senior Attorney DECand found Consent order signed on 03/24/2003 for not this spill.Prior to Sept, 2004 data translation this spill Lead_DEC Field was "TIPPLE"Does not appear on PBS database. Called Jill Huey. She stated that she received a Consent Order to bring the facility in compliance with state laws. The tank is 5000 gallons. 3/11/2003 ars.DEC Sigona sent TTF notice on March 14, 2003.9/11/06 This case was transfered from Albany to Region 2. Zhune spoke to Jill Huey (ph: 718-9052) She doesn't want phone calls. She wants every thing by writing. 9/11/06 A TTF letter was sending to :Jill Huey 498 Leonard Street Brooklyn, NY 1122209/18/06 Ms. Huey sent a package of documents the passing tank test from 2003 was missing. 09/19/06 I sent a letter requesting her the tank test results from 2003. 09/22/03 Ms. Huey sent a package of 8 pages including the passing tank test results from 2003, letters stated the following: The system test passed. After the system test failed in October due to a vent bad line, we decided to replace all pipes just to be sure we would pass. Also we would like to convey to your department that no contamination was detected in our system.What was the cause of the tank test failure on March 3, 2003?Water in tank issue. Piping needed to be replaced was replaced and systems test passed as a result of replacement. 09/27/06 This case was closed for V. Zhune in accordance with J. Vought.

Spiller City,St,Zip: BROOKLYN, NY
Spiller Company: 999
Contact Name: EZGY KARAYEL
Contact Phone: 7186360800
DEC Memo: Sangesland spoke to Ezgy (As-Gee). (See eDocs for Phase 2 Report) She said the property is a 2 story industrial building being sold to a developer who will tear it down for a new residential building. City has placed an "e-designation" on the property because it's changing from industrial to residential. Problem is associated with leaking from a 5,000 gal buried oil tank. Hydro Tech was hired by the potential buyer and found contamination. Hydro Tech will continue to work on the site and come up with a plan to solve the spill problems and close them out.

Remarks: tank is in place, soil samples confirm contamination

DEC Memo: Vought was on off hours 8/16/10 - Raphael Ketani. The spill was called in on 12/20/06 by the NYPD and Gabriel Kapur of the NYCDEP (917) 682-3753. The spill was large gas puddles on the surface of the site. The site is block and lot 2733 and 7. It was sold on 7/28/87 by Lawrence Sievers of 5 Mt. Logan Court, Farmingville, NY to Walter Romansky and Dimitri Shtairman of 2421 East 74 Street, Brklyn, NY. There are two PBS registrations. PBS #2-510793 is for the 278 Fuel Stop, Inc. It lists four 4,000 gal. USTs and one 550 UST as still active with gasoline and diesel. The 4,000 gal. tanks were installed in either 1972 or 1999. The 550 UST was installed in 1939. There were 4 USTs that were closed and removed in 1939. The owner of the site is 278 Fuel Stop, Inc. (718) 388-3329. The contact is Kuldeep S. Sakota (718) 388-3329/(201) 548-1658. PBS #2-611136 is for A-1 Auto Repairs, Inc. It lists just a 275 gal. waste oil tank as being in service that was installed in 6/1/08. The owner of the site is Avtar Singh, 126 Berwood Drive, Linden, NJ 07036 (908) 486-0412. Mr. Singh is also at (718) 388-3464. There is no paper file and there are no E-docs. There are two other spill cases, both of which were closed by Steve Sangesland of Spills. They are #9900802 and #0310672. Case #9900802 was opened on 4/21/99 and closed on 8/10/99. It was based upon the discovery of oil contaminated soil when they pulled the 550 gal. UST.

CONSTRUCTION SITE (Continued)

S104648903

The soil was dug out and the end point samples were below 50 ppb. Case #0310672 was opened on 12/16/03 and closed on 12/16/03. There was an anonymous call regarding someone sweeping gas into the sewers. 8/25/10 - Raphael Ketani. I made an unannounced site visit today. It was raining moderately, but I felt that it would still be possible to determine the site conditions. The site fronts on Leonard Street and on Meeker Avenue, where it parallels the Brooklyn Queens Expressway. There wasn't much to see from the Leonard Street side. There is a corrugated still building that opens onto Leonard Street. It has a sloping roof (see E-docs). The building was being used as a metal fabrication shop. The floor was clean. Next, I went to the Meeker Avenue side of "278 Fuel Stop." Even though it was raining, I didn't see any sheen on the pavement in the fueling area (see E-docs). There appeared to be some small (about 6" diameter) stains on the, but nothing else. Next, the gas station manager showed me the repair area. The area was largely dry as it was mostly covered by a roof. There were several trucks in and next to the garage. I didn't see any free product on the pavement, but there were some old stains. I told the station manager to make sure that any spills that occur are cleaned up quickly. After this, I left the site. As the spills mentioned in the original spill report are no longer present, and as there appeared to be no new spills, I have determined that there is no threat to the environment or the public. Therefore, I am closing the spill case.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: 100 eckert street.During a regular delivery to 100 eckert, the owner of 101 eckert asked the driver for a delivery to his house. That homeowner actually used "Consumers oil" and screwed up the various oil company names. Homeowner said he had a 550 gal tank (it was really a 275gal) At 240gal the tank overfilled.3gal came out on cement driveway, 2 gal on solid sealed cement floor in basement. All cleaned within 1 hour.
Remarks: STORAGE TANK OVERFILL DUE TO WRONG DELIEVRY AND IS ALL CLEANED UP

Actual:
19 ft.

Site Description: Location: The 0.135 acre site is located in an urban area of Brooklyn at 230 Kent Avenue, Brooklyn, NY 11211 (Block 2362, Lot 1). It is bordered by Kent Avenue to the east, by River Street to the west, by North First Street to the south, and by Con Edison's former North First Street Oil Storage Terminal to the north. Site Features: On site it is a two story wood frame building with a partial basement. The building was used for paint and lacquer manufacturing. The site has a RCRA Closure Work Plan which began in 2011 (EPA # 001270867). Current Zoning: The current zoning is M3-1, heavy manufacturing. The site is located approximately 500 ft from the East River. The surrounding neighborhood consisted of warehouses, other manufacturing facilities, and residential buildings. In the last ten years, the neighborhood has transformed into a predominantly residential area. Historical Use: The site was a paint and lacquer manufacturing facility from 1930 to 2010. The facility was a large hazardous waste generator with an assigned EPA number 001270867. The owner of the site entered into a Voluntary Cleanup Agreement (VCA) with the Department in April 2001. Geology and Hydrogeology: The site is located in the Atlantic Coastal Plain. The geology of this province is comprised of interbedded of sand clay and marl. The shallow soil beneath the site consists of 75 feet of medium and coarse sand, gravel and silt layers. The groundwater is 7 to 15 feet below grade. The groundwater flow direction is west towards East River.

Env Problem:

Nature and Extent of Contamination: a) contamination: based on the investigations performed at the site it was revealed that the soil, soil vapor and groundwater are contaminated with volatile organic compounds (VOCs). The main VOCs are acetone, ethylbenzene, toluene, and mixed xylenes. b) areal/depth extent: the VOC plume from 14 closed-in-place underground storage tanks (USTs), and from spills which occurred during the manufacture of paint and lacquer, extends across the foot print of the Fyn Paint building into the adjacent sidewalks and parking lot. c) concentrations: Groundwater monitoring conducted in 2006 revealed non-aqueous phase liquid (NAPL) and dissolved-phase contamination in three of the on-site and off-site monitoring wells. In March 2007, an Interim Remedial Measure (IRM) consisting of a groundwater pump and treatment system with an activated carbon filtration stage was installed and operated. The Remedial Investigation (RI) was completed in January 2008. A Remedial Action Work Plan (RAWP) to address on-site and off-site contamination was approved by the Department in October 2009. In 2010, a pilot test for soil vapor extraction and dual phase extraction system was

Health Problem: performed for additional remedial system design. In July 2011, the RCRA closure work plan was approved and RCRA closure activities continued through 2012. It is unlikely that people will drink contaminated groundwater since the area is provided with public water. It is also unlikely that area residents will come in contact with contaminated soil and subsurface material since the site and the surrounding area are covered with buildings and pavement. If the site is redeveloped, construction workers or future site occupants may come in contact with site related contamination in soil if it is not handled properly. The potential for nearby residents and building occupants to breathe site-related contaminants that may migrate into nearby buildings via soil vapor intrusion will be evaluated.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/14/2001 - Store front building with 3-4 apartments above.2-275 gallon #2 oil tanks in the basement service the building.Scaggs & Walsh Oil Company made a delivery (no sign of overflow) Later that day the bottom of one of the tanks (looks like corrosion) gave way and approx 100 gallons went to the basement floor and a drywell floor drain.NYFD on scene emptied most of the 275 gallon tank into overpack drums. Scaggs & Walsh arrived on the scene and pumped out whatever remained. Scaggs & Walsh's insurance would not cover the loss because the tank is the property of the building owner and the tank failed due to corrosion. Scaggs & Walsh hired Milro Associates after a verbal discussion with the building owner (Robert Bak 718-628-9700) that the cost of the clean up was the responsibility of the building owner.3/16/2001 - Sangesland called Milro to find the cleanup status. Paul (at Milro) said between 3/14 and 3/15 a 5'x8' section of the floor was opened up and dug down 2' and 2 cubic yards of contaminated soil was removed. Milro is not working today (3/16) because Scaggs & Walsh is installing new oil tanks. Milro will return on Monday 3/19 to continue excavation. 3/20/2001 Paul at Milro says the excavation is approx 5' x 10' x 3' deep. Because of access problems they can't really excavate any more and he'll probably spend one more day on site. Paul said he would PID the samples first and if they don't look bad, he'll back fill before the soil samples come back from the lab. 4/5/2001 End point sample from excavation was tested for: TCLP Volatiles 8021/STARS (All results were "Non-Detect") TCLP Polynuc, Arom. Hydrocarbons (BN) 8270 - "Non-Detect"Spill closed 4/5/2001

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Event date: 02/10/1993
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 12/28/2000
Event: RFA Determination Of Need For An RFI, RFI is Not Necessary;

Event date: 12/28/2000
Event: RFA Completed

Event date: 09/24/2009
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 09/24/2009
Event: CA550NR

Event date: 09/24/2009
Event: Corrective Action Process Terminated

Event date: 09/24/2009
Event: Date For Remedy Selection (CM Imposed)

 20 ft.

Site Description:

Location: The site is located in the Greenpoint section of Kings County (Borough of Brooklyn, New York City). The site is located on the southwest corner of the intersection of Kingsland and Norman Avenues. Site Features: The site is completely covered by multiple buildings of varying construction and height. Numerous other commercial and industrial properties are located to the north, east, and west of the site. A large residential area is located immediately south of the site, and extends south along both Kingsland Avenue and Monitor Street. A large sewage treatment plant is ~1/2 mile north of the site. Current Zoning/Use(s): The site is zoned for both residential and light manufacturing. The site is partially occupied, and is utilized for a variety of purposes (residential, warehousing, woodworking shop, etc.). Historical Use(s): The Department began a Site Characterization in this area during the Spring of 2007 as part of a plume trackdown investigation (Meeker Avenue Plume Trackdown, DEC Site ID No. 224121). This particular location was specifically targeted for investigation based on Sanborn fire insurance map data indicating that the site was operated by Spic and Span Cleaners and Dyers, Inc. (a.k.a. Eastern District Dye Works) from the early 1900's until the mid-1960's. This investigation was conducted in several phases, and was completed in the Summer of 2009. Site Geology and Hydrogeology: The site is underlain by a fill unit (0.5-10' thick), a stratified sand unit with some to no fines (over 120' thick), a discontinuous glacial till unit within the sand unit (0.5-50' thick), a discontinuous clayey silt unit within the sand unit (0.5-25' thick), and the Raritan Formation (~138.5' below ground surface). Groundwater is approximately 11-25' below ground surface in the vicinity of the site. Groundwater flows north to northeast toward Newtown Creek, which lies approximately 1,300' northeast of the site.

Env Problem:

Nature and Extent of Contamination: - Groundwater The primary contaminant of concern at the site is tetrachloroethene (PCE). PCE has been found in shallow groundwater at concentrations up to 39,000 ppb, and in deep groundwater at concentrations up to 76,000 ppb, well above the Part 703.5 class GA standard of 5 ppb. PCE DNAPL has also been found on-site at concentrations up to 730,000 ppm (73%) in deep monitoring wells. Trichloroethene (up to 3,900 ppb), cis-1,2-dichloroethene (up to 14,000 ppb), and vinyl chloride (up to 3,200 ppb) have also been found in shallow groundwater at concentrations above their respective Part 703.5 class GA standards (5 ppb each). - Soil PCE has been found in soil up to 290,000 ppm, well above the soil cleanup objective for unrestricted use (1.3 ppm). - Soil Vapor and Indoor Air Concentrations of PCE in soil vapor have been

S109416408

found up to 8,200,000 ug/m³, and in indoor air up to 170 ug/m³. Concentrations of TCE in soil vapor have been found up to 32,000 ug/m³, and in indoor air up to 12 ug/m³. Significant Threat: The site poses a significant environmental threat due to ongoing release of PCE from source areas into soil and groundwater.

Health Problem: Exposure to site-related contamination in drinking water and soil is unlikely since area homes and businesses are supplied with public water and contaminants are below the ground surface. Since the possibility exists for vapors from site-related chemicals to migrate into nearby homes and businesses, soil vapor intrusion sampling will continue in the area and data evaluated as they become available.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/09/2013
Number of Days to Update: 62	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/09/2013
Number of Days to Update: 62	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/29/2013	Telephone: 703-412-9810

Number of Days to Update: 72	Next Scheduled EDR Contact: 10/21/2013
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/18/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/18/2013
Date Data Arrived at EDR: 07/01/2013

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/29/2013	Telephone: 703-603-0695
Date Made Active in Reports: 05/10/2013	Last EDR Contact: 06/10/2013
Number of Days to Update: 42	Next Scheduled EDR Contact: 09/23/2013
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/29/2013	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 05/21/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/23/2013	Telephone: 518-402-9622
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/23/2013
Number of Days to Update: 48	Next Scheduled EDR Contact: 09/02/2013
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 01/01/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 02/20/2013	Telephone: 518-402-9814
Date Made Active in Reports: 03/15/2013	Last EDR Contact: 05/24/2013
Number of Days to Update: 23	Next Scheduled EDR Contact: 09/02/2013
	Data Release Frequency: Varies

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 04/22/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 04/23/2013	Telephone: 518-457-2051

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 05/21/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/23/2013	Telephone: 518-402-9549
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/23/2013
Number of Days to Update: 48	Next Scheduled EDR Contact: 09/02/2013
	Data Release Frequency: Varies

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

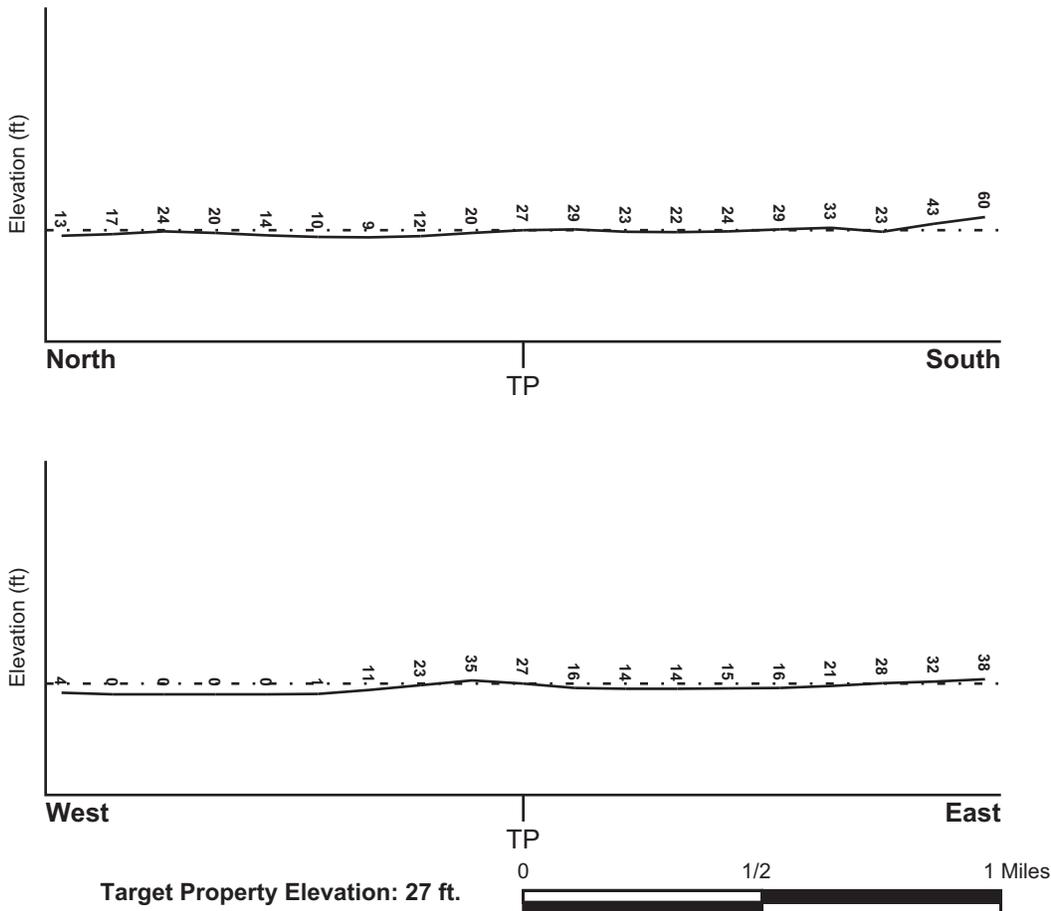

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Paleozoic
System:	Ordovician
Series:	Ordovician
Code:	Oe (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Eugeosynclinal Deposits

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Database

Department of Environmental Conservation

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Laboratory Reports in Digital Format

Tuesday, December 30, 2014

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 138 N 10TH STREET BROOKLYN
Sample ID#s: BH49925 - BH49934

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

Enclosed are revised Analysis Report pages. Please replace and discard the original pages. If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatiles analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Volatile Comment:

There was a suppression of the last internal standard in the low level analysis, all affected compounds are reported from the methanol preserved high level analysis which did not exhibit this interference.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

B* = Present in blank, a bias is possible.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

Semi-Volatile Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, a dilution was required resulting in an elevated RL for the semivolatile analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Please be advised that the NY 375 soil criteria for chromium are based on hexavalent chromium and trivalent chromium.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

This report must not be reproduced except in full as defined by the attached chain of custody.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Project ID: 138 N 10TH ST., BROOKLYN
Sample ID#s: BH50841 - BH50843

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller".

SDG Comments

December 19, 2014

SDG I.D.: GBH50841

8260 Volatile Organics:

1,2-Dibromoethane, 1,2,3 Trichloropropane, and 1,2-Dibromo-3-chloropropane do not meet NY TOGS GA criteria, these compounds are analyzed by GC/FID method 504 or 8011 to achieve this criteria.

SIM Analysis:

The lowest possible reporting limit under SIM conditions is 0.02 ug/L. The NY TOGS GA criteria for some PAHs is 0.002 ug/L. This level can not be achieved.

8081 Pesticides:

Toxaphene is reported to the lowest possible reporting level. The NY TOGS criteria for this compound can not be achieved.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Pesticide Comment:

Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

1 = This parameter is not certified by NY NELAC for this matrix. NY NELAC does not offer certification for all parameters at this time.

**RL/PQL=Reporting/Practical Quantitation Level (Equivalent to NELAC LOQ, Limit of Quantitation) ND=Not Detected
 BRL=Below Reporting Level J=Estimated Below RL LOD=Limit of Detection MDL=Method Detection Limit**

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.
