CERTIFICATION

I, Richard J. Izzo, CPG, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for Whipple Apartments, (NYC VCP Site No. 14CVCP227K). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

<u>Richard J. Izzo</u>	<u>2/11/14</u>	
Qualified Environmental Professional	Date	Signature

EXECUTIVE SUMMARY

This Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 7 Whipple Street in the East Williamsburg section in Brooklyn, New York and is identified as Block 2272 and Lots 45, 46, 147 on the New York City Tax Map. Figure 2 shows the Site location. The Site is 10,000-square feet and is bounded by a one-story commercial building and a vacant lot to the north, Whipple Street to the south, Bartlett Playground to the east, and a vacant lot to the west. Currently, the Site is used for parking and storage and does not contain any permanent structures.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site includes an eight-story residential building. The layout of the proposed site development is presented in Figure 3. According to the NYCOER SPEED application, the current zoning designation for the property is R7A for residential. The proposed use is consistent with existing zoning for the property.

The proposed development consists of an eight-story, 51 unit, residential building with a rear yard. The anticipated excavation depth of the building will be six feet below grade. Additionally, the rear yard excavation is anticipated to be between two and three feet for grading purposes. As part of the development, the above referenced lots are expected to be merged into lot number 45. As the depth to water was found at eight feet below grade the excavation is not anticipated below the water table. The Site is currently a parking lot with no permanent structures, and therefore, will not require demolition.

Summary of Past Uses of Site and Areas of Concern

According to the EDR Sanborn Fire Insurance Maps the past uses of the Site are:

- 1887- the Site was developed with four, mixed use commercial and residential buildings with two small sheds.

- 1904 to 1965- the Site was developed with three, five-story mixed use commercial and residential buildings.
- 1977 to 1980- the Site was developed with one, three-story residential building.
- 1981 to present- the Site has been vacant land.
- 2005- the Site was occupied by a car rental company, Star Car Rental and Allen Jarvis.

Currently the Site does not have any structures and is a vacant lot utilized for parking and storage.

Summary of the Work Performed under the Remedial Investigation

A Phase I ESA and Limited Phase II Investigation were completed for the Property in September 2013, by Environmental Business Consultants (discussed further in section 2.2). Based on the results of these investigations, a meeting with NYC OER, and the scope of the proposed redevelopment, CA RICH performed the following additional scope of work in accordance with the NYCOER approved Phase II Work Plan:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed four soil borings across the Site, and collected four soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells on the Site and collected two groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed four soil vapor probes on Site and collected four samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property ranges from 14 to 15 feet above mean sea level.
2. Depth to groundwater ranges from eight to ten feet at the Site.
3. Groundwater flow is generally towards northwest beneath the Site.
4. Bedrock was not encountered at the Site.

5. The stratigraphy of the site, from the surface down, consists of five feet of medium grain sand and fill material underlain by native silty sand.
6. Soil samples collected during the September 2013 Limited Phase II Investigation showed one VOC, acetone identified exceeding Unrestricted Use SCO. SVOCs including benzo(b)fluoranthene, Indeno(1,2,3,cd)pyrene, benzo (a) anthracene, and chrysene were detected above Part 375 Restricted Residential SCOs in both the shallow and deep soil samples collected. Metals including barium, lead, and mercury were detected above Part 375 Restricted Residential SCOs in the shallow soil throughout the Site.
7. Additional soil sampling was conducted during remedial investigations. The soil sampling results were compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCOs) for Unrestricted and Restricted Residential Use SCOs. Trace concentrations of VOCs (all less than 5 ppb) including acetone, methylene chloride and toluene were detected in soil samples. All concentrations were well below Unrestricted Use SCOs. SVOCs including, benzo(a)anthracene (3,200 ug/kg), benzo(a)pyrene (2,900 ug/kg), benzo(b)fluoranthene (2,900 ug/kg), dibenzo(a,h)anthracene (550 ug/kg) and indeno(1,2,3-c,d)pyrene (2,300 ug/kg) were detected above NYSDEC Part 375 Restricted Residential Use SCOs . Four pesticide including 4,4'-DDD (17 ppb), 4,4'-DDE (20 ppb), 4,4'-DDT (33 ppb), and dieldrin (17 ppb) were detected exceeding Unrestricted Use SCOs. All concentrations were well below Restricted Residential SCOs. One PCB, aroclor 1248 (280 ppb) was detected in one soil samples exceeding Unrestricted Use SCO. Metals including lead (max. of 88 ppb), mercury (max. of 0.67 ppm), nickel (max. of 48 ppm) and zinc (max. of 145 ppm) exceeded Unrestricted Use SCOs, but were well below Restricted Residential Use SCOs. Overall, soil chemistry was unremarkable and do not indicate any disposal conditions.
8. Groundwater samples collected during the September 2013 Limited Phase II Investigation contained the VOC (MTBE) above its TOGs standard in the northern portion of the Site. No other VOCs were detected.
9. Additional groundwater samples were obtained during remedial investigations. The groundwater sample results were compared to NYSDEC Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards (GQS). Groundwater

samples collected during the RI detected one VOC, methylene chloride (5.1 ug/l) slightly exceeding its GQS. Trace concentrations of acetone and toluene were also detected in groundwater. SVOCs and PCBs were not detected above their detection limits. One pesticide, 4,4, DDT slightly exceeded its GQS in one groundwater sample. Metals including iron and manganese exceeded their GQS.

10. Soil vapor samples collected during the RI showed a wide range of petroleum related and chlorinated VOCs at trace concentrations and included acetone, benzene, chloromethane, dichlorofluoromethane, ethanol, freon 113, heptane, hexane, isopropyl alcohol, methylene chloride, methyl ethyl ketone, propylene, toluene and m,p-xylene. All compounds were detected at concentrations less than 10 $\mu\text{g}/\text{m}^3$. Chlorinated VOCs including carbon tetrachloride, TCA and TCE were not detected above their detection limits. Tetrachloroethylene (PCE) was identified in all soil vapor samples at a maximum concentration of 2 $\mu\text{g}/\text{m}^3$. The PCE, TCA, TCE and carbon tetrachloride concentrations are below the monitoring level ranges established within the State DOH soil vapor guidance matrix.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Whipple Apartments, plans to enroll into the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 10,000 square foot site located at 7 Whipple Street in the East Williamsburg section of Brooklyn, New York See Figure 1, Site Map. Residential use is proposed for the property. The RI work was performed on January 16 and 17, 2014. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 7 Whipple Street in the East Williamsburg section in Brooklyn, New York and is identified as Block 2272 and Lots 45, 46, 147 on the New York City Tax Map. Figure 2 shows the Site location. The Site is 10,000-square feet and is bounded by a one-story commercial building and a vacant lot to the north, Whipple Street to the south, Bartlett Playground to the east, and a vacant lot to the west. Currently, the Site is used for parking and storage and has no permanent structures. .

1.2 Proposed Redevelopment Plan

The proposed future use of the Site is an eight-story residential building. Layout of the proposed site development is presented in Figure 3. According to the NYCOER SPEED application, the current zoning designation for the property is R7A for residential. The proposed use is consistent with existing zoning for the property.

The proposed development consists of an eight-story, slab on grade, 51 unit, residential building with a rear yard. The first story of the proposed building will contain a social service office, superintendent's office, and community room. The anticipated excavation depth of the building is six feet below grade. Additionally, the rear yard excavation is anticipated to be between two and three feet for grading purposes. As part of the development, the above referenced lots are expected to be merged into lot number 45. As the depth to water is at eight feet below grade the excavation is not anticipated below the water table. The Site is currently

used for parking and storage and has no permanent structures, and therefore, will not require demolition.

1.3 Description of Surrounding Property

According to the OER's SPEED application the Site is bound by a one-story commercial building (zoned R7A for transportation and utility) and vacant lot to the north (zoned R7A for parking facilities), Bartlett Playground (zoned as a park) to the east, Whipple Street to the south, and a vacant lot (zoned R7A for parking facilities) to the west. There are no schools or hospitals within a 500-foot radius. However, there is a daycare center identified as "Beginning with Children", (11 Bartlett Street) located approximately 500-feet west of the Site.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

According to the EDR Sanborn Fire Insurance Maps the past uses of the Site are:

- 1887- the Site was developed with four, mixed use commercial and residential buildings with two small sheds.
- 1904 to 1965- the Site was developed with three, five-story mixed use commercial and residential buildings.
- 1977 to 1980- the Site was developed with one, three-story residential building.
- 1981 to present- the Site has been vacant land.
- 2005- the Site was occupied by a car rental company, Star Car rental and Allen Jarvis.

Currently the Site does not have any structures and is a vacant lot utilized for parking and storage.

According to the New York City Department of Finance (NYCDOF) ACRIS database for the subject Property the title was transferred from Richard Lewisohn to City of NY on April 21, 1971; from Finance Administrations of the City of New York to City of New York on October 21, 1977; from The City of New York to Salvatore Minucci on September 9, 1983; from Commissioner of Finance of The City of New York to City of New York on May 28, 1986; from

Salatore Minucci to Victor Gluck on July 28, 1987 and, from Victor Gluck to 11 Whipple Realty Corp. on February 17, 1998. .

2.2 Previous Investigations

The following environmental reports were prepared for the Site:

A Phase I Environmental Site Assessment was performed on the Property in September 2013 by Environmental Business Consultants. Although no recognized environmental conditions (RECs) were identified, an additional environmental issue was identified:

- The Site is identified as having E designation (E-238) for HAZMAT/Noise/Air. The Property was assigned an E-designation during the Broadway Triangle action completed by the City in December 22, 2009. The E designation requires an environmental review and issuance of a Notice to Proceed before the Property can be redeveloped.

A Limited Phase II Subsurface Investigation was performed on the Property in September 2013 by Environmental Business Consultants. The soil and groundwater results are summarized below:

Soil

- The VOC, acetone was identified above Part 375 Unrestricted SCO in the soil at 10-12 feet in the northern portion of the Site. No other VOCs were detected.
- SVOCs, (benzo(b)fluoranthene, Indeno(1,2,3,cd)pyrene, benzo (a) anthracene, andchrysene) were detected above Part 375 Restricted Residential SCOs in both the shallow and deep soil throughout the Site.
- Barium, lead, and mercury were detected above Part 375 Restricted Residential SCOs in the shallow soil throughout the Site.

Groundwater

- The VOC, (MTBE) was identified above its TOGS standard in the groundwater in northern portion of the Site. No other VOCs were detected.

Based on the findings of this Limited Phase II Subsurface Investigation and the NYC OER approved Work Plan, the Remedial Investigation scope was proposed.

A map of the previous investigations soil and groundwater chemistry exceedances are provided as Figure 4. Historical Reports are presented in Appendix A.

2.3 Site Inspection

On January 17, 2014, Jessica Proscia of CA RICH inspected the Site. At the time of the inspection several containers of paints and motor oil were observed in the northern portion of the Property. Additionally, two empty 55-gallon drums were also observed on the Property. Some staining was also observed on the ground surface throughout the Property.

2.4 Areas of Concern

A Phase I Environmental Site Assessment was performed on the Property in September 2013 by Environmental Business Consultants. Although no recognized environmental conditions (RECs) were identified, an additional environmental issue was identified:

- The Site is identified as having E designation (E-238) for HAZMAT/Noise/Air. The Property was assigned an E-designation during the Broadway Triangle action completed by the City in December 22, 2009. The E designation requires an environmental review and issuance of a Notice to Proceed before the Property can be redeveloped.

In addition, the presence of historic fill material identified in the soil borings is also an area of concern.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is Richard J. Izzo, CPG- Associate.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. Appendix B includes the subject Property's Health and Safety Plan.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

CA Rich Consultants, Inc. performed the following scope of work:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Installed four soil borings across the entire project Site, and collected four soil samples for chemical analysis from the soil borings to evaluate soil quality;
3. Installed two groundwater monitoring wells throughout the Site and collected two groundwater samples for chemical analysis to evaluate groundwater quality;
4. Installed four soil vapor probes around Site perimeter and collected four samples for chemical analysis.

4.1 Geophysical Investigation

A geophysical investigation was not conducted on the Property.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

On January 16, 2014, four strategically placed soil borings were installed utilizing a Geoprobe™ drilling system. The soil borings were identified as SB-1 through SB-4. Boring SB-1 was installed in the northeastern portion of the Site, SB-2 was installed in the northwestern portion of the Site, SB-3 was installed in the center of the Site, and SB-4 was installed in the southwestern portion of the Site. Soil borings SB-1 and SB-2 were advanced to four feet below grade in the area of the proposed rear yard. Soil borings SB-3 and SB-4 were advanced to eight feet below grade beneath the area of the proposed building footprint. All soil borings locations were based on the September 2013 Limited Phase II Subsurface Investigation results and CA RICH's approved January 2014 Phase II Work Plan. During drilling, soil samples were continuously collected and examined for evidence of contamination with a photoionization detector (PID) and for evidence of chemical staining. No PID readings were identified in any of the soil borings. Additionally, no odors or soil discoloration was identified. The soil was classified as dark brown medium grain sand with fill materials from zero to five feet and tan silt and sand from five to eight feet. Groundwater was not encountered in any of the soil borings.

Boring logs were prepared by a Jessica Proscia and are attached in Appendix C. A map showing the location of soil borings and monitor wells is shown in Figure 5.

Groundwater Monitoring Well Construction

On January 16, 2014, two, two-inch permanent groundwater monitoring wells (MW-1 and MW-2) were installed utilizing a Geoprobe™ drilling system to the shallow water table to determine the depth to groundwater as well as the quality of the uppermost groundwater presently occurring beneath the Site. The depth of the shallow groundwater ranged from 8 to 10 feet below grade. All monitoring well locations were based on the September 2013 Limited Phase II Subsurface Investigation results and CA RICH's approved January 2014 Phase II Work Plan. Monitoring well MW-1 was installed in the proposed rear yard in the northeastern portion of the Site. Monitoring well MW-2 was installed in the southwestern portion of the Site in the area of the proposed building footprint.

Monitoring wells MW-1 and MW-2 were installed 10 feet through the shallow groundwater table into the uppermost zone of saturation. Both monitoring wells were installed to a depth of 20 feet below grade. During drilling, soil samples were continuously collected and examined for evidence of contamination with a PID and for evidence of chemical staining. No PID readings were identified during monitoring well installation. Monitoring well construction consisted of 15 feet of two-inch diameter well screen and approximately five feet of two-inch diameter schedule 40 PVC riser. Each well was finished with a bentonite seal, a watertight j-plug and eight-inch flush mounted well protection box. The wells were developed immediately following the installation of each well.

Monitoring well locations are shown in Figure 5.

Survey

The soil borings, monitoring wells, and soil vapor point locations were installed in accordance with the Phase II Work Plan dated January 2014, to OER. All sample locations were accurately measured in the field and noted on a scaled figure.

Water Level Measurement

The depth to water was measured using a slope indicator. Water level data are included in Appendix D.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

On January 16, 2014, four strategically placed soil borings were installed utilizing a Geoprobe™ drilling system. The soil borings were identified as SB-1 through SB-4. Soil borings SB-1 and SB-2 were advanced to four feet below grade in the area of the proposed rear yard. Soil borings SB-3 and SB-4 were advanced to eight feet below grade beneath the area of the proposed building footprint. Samples were obtained from two to four feet in borings SB-1 and SB-2. Additionally, samples were obtained from six to eight feet in borings SB-3 and SB-4. Samples were collected by utilizing Geoprobe's, direct push macro core sample sleeves. Samples were stored on ice pending shipment to American Analytical Laboratories of Farmingdale, New York. All samples were uniquely identified and all information associated with the samples were recorded utilizing standard chain-of-custody sampling protocols. For QA/QC purposes one duplicate sample was also obtained.

Data on soil sample collection for chemical analysis, including dates of collection and sample depths are reported in Tables 1 through 5. Figure 5 shows the location of samples collected in this investigation. Laboratories and analytical methods are summarized below.

Groundwater Sampling

On January 16, 2014, two groundwater monitoring wells (MW-1 and MW-2) were installed utilizing a Geoprobe™ drilling system to the shallow water table to determine the depth to groundwater as well as the quality of the uppermost groundwater presently occurring beneath the Site. The depth of the shallow groundwater ranged from 8 to 10 feet below grade. Monitoring wells were installed to a depth of 20 feet below grade.

On January 17, 2014, a groundwater sample was collected from each well utilizing low-flow sampling technology. The sampling pump and slope were decontaminated before and in between each monitoring well collection using a detergent rinse followed by a tap water rinse to prevent cross-contamination between the monitoring wells. All monitoring well samples were sampled in accordance with EPA's Low-Flow (minimal drawdown) Groundwater Sampling Procedures. Groundwater parameters (e.g, turbidity, pH, temperature, conductivity, etc.) were obtained during sampling. Samples were stored on ice pending shipment to American Analytical Laboratories of Farmingdale, New York. All samples were uniquely identified and all information associated with the samples were recorded utilizing standard chain-of-custody sampling protocols. For QA/QC purposes one duplicate sample was also obtained.

Groundwater sample collection data are reported in Tables 6 through 10. Sampling logs with information on purging and sampling of groundwater monitor wells is included in Appendix D. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below.

Soil Vapor Sampling

On January 16, 2014, four soil vapor points were installed to six feet below grade using a Geoprobe™ drilling system, designated SV-1 through SV-4. The soil vapor points were constructed of a stainless steel screen connected to stainless steel ¼-inch tubing. The annular space around the screened zone was filled with clean No. 2 Morie sand. Prior to sampling, three volumes were purged from each soil vapor point. An SKC Pocket Pump™, which includes both a flow meter and a flow totalizer, was used to assure that the purge rate did not exceed 0.2 liters per minute; and that the required volume was purged from the sample point. The points were completed with temporary caps and were removed after the testing was completed.

On January 17, 2014, the soil vapor points were sampled in accordance with New York State Department of Health's (NYSDOH) prevailing Guidance for Evaluating Soil Vapor Intrusion in the State of New York dated October 2006. In addition, the soil vapor samples were chemically analyzed using the procedures and protocols described in the Sample Preparation, and Analysis Requirements of EPA Compendium Method T0-15. A three-way "T" connector valve assembly was connected to a vacuum pump and a pre-cleaned six-liter SUMMA® air sampling canister. Prior to collecting the soil vapor samples, the sample tubing was purged using a vacuum pump set at a rate of approximately 0.2 liters per minute. A helium tracer gas was used to enrich the

atmosphere around the sampling location. The tracer gas verifies that interior ambient air is not inadvertently drawn down into the soil vapor sample. Both the purge volume from the sampling tube and the helium-enriched air within the container was screened for the tracer gas using a Gowmac® Model 21-250 gas leak detector.

Following the purging and tracer gas verification steps, the soil vapor samples were collected using the SUMMA® canister set to fill at a rate of not more than 0.2 liters per minute with an approximate fill time of 2-hours. Samples were shipped to Accutest Laboratories of Dayton, New Jersey. All samples were uniquely identified and all information associated with the samples were recorded utilizing standard chain-of-custody sampling protocols.

Soil vapor sampling locations are shown in Figure 5. Soil vapor sample collection data are reported in Table 11. Soil vapor sampling logs are included in Appendix C. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by Lori Beyer (soil and groundwater) AND Accutest Laboratories (soil vapor)
Chemical Analytical Laboratory	Chemical analytical laboratorys used in the RI are NYS ELAP certified and were American Analytical Laboratories and Accutest Laboratories
Chemical Analytical Methods	Soil analytical methods: <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000);

	<ul style="list-style-type: none"> • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.
--	---

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Tables 1 through 11. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix E.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Based on the information obtained during the Phase II Investigation the Site is underlain by medium grain sand to five feet below grade and silty sand from five to ten feet below grade. The depth of the shallow groundwater ranged from eight to ten feet below grade.

Stratigraphy

The stratigraphy of the Site consists of medium grain sand with fill materials to five feet below grade and silty sand from five to ten feet below grade.

Hydrogeology

According to the Phase II Investigation, the depth to groundwater ranged from eight to ten feet below surface grade. The groundwater flow at the Site is assumed to be to the northwest towards the East River.

A table of water level data for all monitor wells is included in Appendix D.

5.2 Soil Chemistry

The soil sampling results were compared to the New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCOs) for Unrestricted and Restricted Residential Use. The soil borings were identified as SB-1 through SB-4. Samples were obtained from two to four feet in borings SB-1 and SB-2. Additionally, samples were obtained from six to eight feet in borings SB-3 and SB-4.

The results of the chemical analysis of the four soil borings indicate the following:

- VOCs - VOCs were not detected above Part 375 unrestricted use SCOs in SB-1 through SB-4. Trace levels of (less than 5 ppb) of acetone, methylene chloride and toluene were detected in soil samples.
- SVOCs – SVOCs were not detected above Part 375 SCOs in soil borings SB-1 or SB-4. The concentrations of SVOCs benzo (a) anthracene (3,200 ug/kg), benzo (a) pyrene (2,900 ug/kg), benzo (b) fluoranthene (2,900 ug/kg), dibenzo (a,h) anthracene (550

ug/kg), and indeno (1,2,3-c,d) pyrene (2,300 ug/kg) were detected exceeding restricted residential SCOs in SB-2. Benzo (k) fluoranthene (2,600 ug/kg) and chrysene (3,200 ug/kg) were detected exceeding unrestricted SCOs in SB-2. Additionally, indeno (1,2,3-c,d) pyrene (530 ug/kg) was detected above restricted residential SCOs in SB-3.

- Pesticides – pesticides were not detected above Part 375 SCOs in SB-1, SB-3 or SB-4. 4,4'-DDD (17 ug/kg), 4,4'-DDE (20 ug/kg), 4,4'-DDT (3 ug/kg), and dieldrin (17 ug/kg) were detected in SB-2 above unrestricted use SCOs.
- PCBs – PCBs were not detected in SB-1, SB-3, or SB-4. aroclor 1248 (280 ug/kg) was detected in SB-2 above unrestricted use SCOs.
- Metals – Metals were not detected above Part 375 SCOs in SB-4. Lead (65.4 mg/kg) was detected in SB-1, lead (77 mg/kg) and zinc (145 mg/kg) was detected in SB-2, and lead (88.6 mg/kg), mercury (0.452 mg/kg), nickel (48.7 mg/kg) and zinc (114 mg/kg) were detected in SB-3 above Part 375 unrestricted use SCOs.

Data collected during the RI are sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 1 through 5. Figure 6 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Soil Cleanup Objectives. Figure 7 provides a summary of the soil exceedences from the historical investigation and the Remedial Investigation.

5.3 Groundwater Chemistry

The groundwater sample results were compared to NYSDEC Technical & Operational Guidance Series (TOGS) Ambient Water Quality Standards.

The results of the chemical analysis of the two monitoring wells indicate the following:

- VOCs - VOCs were not detected above TOGS standard in monitoring well MW-1. Methylene chloride (5.1 ug/l) a common laboratory contaminant was detected in MW-2 above TOGS standard.

- SVOCs - SVOCs were not detected in MW-1 or MW-2.
- Pesticides – Pesticides were not detected in MW-1 or MW-2 above TOGS standards.
- PCBs – PCBs were not detected in MW-1 or MW-2.
- Metals – Manganese (3.10 mg/L) and iron (0.819 (mg/L) were detected above TOGS standards in MW-1. Manganese (3.10 mg/L) was detected above TOGS standards in MW-2.

Data collected during the RI are sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Tables 6 through 10. Exceedence of applicable groundwater standards are shown. Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 TOGS groundwater standards.

5.4 Soil Vapor Chemistry

According to the NYSDOH Guidance, New York State does not have any standards, criteria or guidance. Therefore, NYSDOH Matrices were developed for carbon tetrachloride, 1,1-dichloroethylene, cis-1,2-dichloroethylene, 1,1,1-trichloroethane, trichloroethylene, and vinyl chloride.

The results of the chemical analysis of the four soil vapor point samples indicate the following:

- VOCs- VOCs were not detected above NYSDOH Matrices.

Data collected during the RI are sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11. Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property. Soil management practices will be implemented in the Remedial Action Work Plan (RAWP)

Construction Details for Soil Borings and Monitoring Wells

	Identification Number	Date of construction	Total Depth	Diameter	Screened interval (Elevation Range)	Construction Material (PVC, steel, etc)
Soil Borings	SB-1	1/16/2014	Four feet	Not applicable	Not applicable	Not applicable
	SB-2	1/16/2014	Four feet			
	SB-3	1/16/2014	Eight feet			
	SB-4	1/16/2014	Eight feet			
Monitor Wells	MW-1	1/16/2014	20 feet	two-inch	Five to 20 ft	PVC
	MW-2	1/16/2014	20 feet	two-inch	Five to 20 ft	PVC

Groundwater Level Data

Monitoring Well ID No.	Date	Water Elevation
MW-1	1/17/2014	8.24 feet
MW-2	1/17/2014	7.58 feet

Site-Specific Standards, Criteria and Guidance

- 6 NYCRR Part 375 - Inactive Hazardous Waste Disposal Sites
- TOGS 1.1.1 - Ambient Water Quality Standards & Guidance Values and Groundwater Effluent Limitations
- NYSDOH Guidance for Evaluating Soil Vapor Intrusion in the State of New York (draft October 2004 or subsequent final draft)

EXECUTIVE SUMMARY

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of The Rabsky Group: 5-11 Whipple Street, Brooklyn, New York, 11206. The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

The Site consists of a three contiguous tax parcels located on the north side of Whipple Street, in the Williamsburg section of the Borough of Brooklyn, City of New York, Kings County, New York. The Site is identified by the street address of 5-11 Whipple Street, and as Block 22726 – Lot Nos. 45, 46, and 147 on the New York City (NYC) tax maps. The lots are rectangular-shaped (100 feet by 100 feet; total) and approximately 10,000 square feet (s.f.) total, with approximately 100 feet of frontage along Whipple Street.

EBC was able to establish a history for the property dating back to 1887. In 1887, the Site was developed with four (4) mixed use commercial and residential buildings and two (2) small sheds. From 1904 to 1965, the Site is developed with three (3) five-story mixed use commercial and residential buildings. From 1977 to 1980, the Site was developed with one three-story residential building. From 1981 to present the Site has been vacant land. In 2005, the site was occupied by a car rental company, Star Car rental and Allen Jarvis

RECOGNIZED ENVIRONMENTAL CONDITIONS

Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed no recognized environmental conditions in connection with the Site.

The following environmental issue was identified for the Site:

The property was assigned an E-designation (E-238) for Noise, Hazmat and Air during the Broadway Triangle action completed by the City in December 22, 2009. The E-designation requires an environmental review and issuance of a Notice to Proceed by the NYC Office of Environmental Remediation (OER) before the property can be redeveloped. The E-designation does not affect the current use of the property.

.

1.0 INTRODUCTION

1.1 Purpose

Environmental Business Consultants (EBC) prepared this Phase I Environmental Site Assessment (ESA) for the following property on behalf of the The Rabsky Group: 5-11 Whipple Street, Brooklyn, NY, 11206 (**Figure 1**). The purpose of the Phase I ESA was to identify and evaluate the presence of recognized environmental conditions at the Site. Recognized environmental conditions are the presence or likely presence of any hazardous substance or petroleum product under conditions that indicate an existing release, a past release or material threat of a release of any hazardous substance or petroleum product into structures on the property or into the ground, groundwater or surface water of the property.

1.2 Scope of Services

The assessment consisted of a visual inspection of the site and surrounding areas, interviews, a review of historical information and maps, and a review of pertinent local, state, federal and facility records. Environmental Data Resources (EDR) of Southport, Connecticut, provided the following information: a computerized database search of environmental compliance records of sites within an ASTM standard radius of the property, a Sanborn fire insurance map search, and a historical telephone directory search.

EBC reviewed the environmental database report compiled by EDR as a part of the assessment. The purpose of the review was to identify reported listings for the Site or other properties in the site vicinity. Databases reviewed included federal and state lists of known or suspected contaminated sites, lists of known handlers or generators of hazardous waste, lists of known waste disposal facilities, and lists of aboveground and underground storage tanks (ASTs and USTs). EBC's review of the database has been incorporated into this report along with a copy of the EDR report.

The work was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process), 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule), and EBC's proposal for services.

1.3 Significant Assumptions

EBC has made the following assumptions in the preparation of this report:

1. Groundwater – The depth to groundwater at the Site is approximately 10 feet below grade surface (bgs). Groundwater is expected to flow to the northwest, consistent with the regional trend.
2. Regulatory Records Information – EBC assumes that all information provided by EDR regarding the regulatory status of facilities within the ASTM Standard approximate minimum search distance is complete, accurate and current.
3. Other - EBC assumes that all information provided through interviews is complete and unbiased.

1.4 Limitations and Exceptions

The conclusions presented in this report are professional opinions based on the data described in this report. These opinions have been arrived at in accordance with currently accepted engineering and hydrogeologic standards and practices applicable to this location, and are subject to the following inherent limitations:

1. The data presented in this report are from visual inspections, examination of records in the public domain, and interviews with individuals having information about the site. The passage of time, manifestation of latent conditions, or occurrence of future events may require further exploration of the site, analysis of data, and re-evaluation of the findings, observations, and conclusions presented in this report.
2. The data reported and the findings, observations, and conclusions expressed are limited by the scope of work. The scope of work was defined by the request of the client.
3. No warranty or guarantee, whether expressed or implied, is made with respect to the data reported, findings, observations, or conclusions. These are based solely upon site conditions in existence at the time of the investigation, and other information obtained and reviewed by EBC.
4. EBC's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. While attempts were made to relate the data and findings to applicable environmental laws and regulations, the report shall not be construed to offer legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, or

regulations, or policies of federal, state, or local government agencies. EBC does not assume liability for financial or other losses or subsequent damage caused by or related to any use of this document.

5. The conclusions presented in this report are professional opinions based on data described in this report. They are intended only for the purpose, site location, and project indicated. This report is not a definitive study of contamination at the site and should not be interpreted as such.
6. This report is based, in part, on information supplied to EBC by third-party sources. While efforts have been made to substantiate this third-party information, EBC cannot attest to the completeness or accuracy of information provided by others.

1.5 Special Terms and Conditions

Authorization to perform this assessment was given by a proposal for services between The Rabsky Group and EBC.

1.6 User Reliance

This report was prepared for the exclusive use of The Rabsky Group; no other party may use the report without the written authority of EBC.

2.0 PROPERTY DESCRIPTION AND PHYSICAL SETTING

2.1 Location and Legal Description

The Site consists of a three contiguous tax parcels located on the north side of Whipple Street, in the Williamsburg section of the Borough of Brooklyn, City of New York, Kings County, New York. The Site is identified by the street address of 5-11 Whipple Street, and as Block 22726 – Lot Nos. 45, 46, and 147 on the New York City (NYC) tax maps. The lots are rectangular-shaped (100 feet by 100 feet; total) and approximately 10,000 square feet (s.f.) total, with approximately 100 feet of frontage along Whipple Street.

According to the most recent deeds, obtained from the New York City Registrar, the current owners of the Site are 11 Whipple Realty Corp. A copy of the deed is attached in **Appendix B**.

2.2 Site Characteristics

The property is currently a vacant lot. Vehicles were observed to be parked on the lot. Site topography is generally level. The south, west and east sides of the Site are secured with a chain link fence.

Photographs taken during of the Site during the site inspection are attached in **Appendix A**.

2.2.1 Utilities

As the Site is currently undeveloped, no utilities are directly provided to the property. Electric, telephone, natural gas, water and sanitary utilities were observed along the adjacent roadways (Whipple Street).

2.3 Physical Setting

The topography of the site and surrounding area was reviewed from the United States Geological Survey (USGS) 7.5-minute series topographic map for the Brooklyn, New York (NY) Quadrangle (Figure 3), which indicates that the Site has a topographic elevation of approximately 14 feet above mean sea level (amsl). The Site is relatively flat with the general topographic gradient sloping downward to the northwest.

2.3.1 Surface Water

The east river is located approximately 1.3 miles to the northwest of the Site.

2.3.2 Soils

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. Soil maps, based on the State Soil Geographic (STATSGO) Database, are compiled by generalizing more detailed Soil Survey Geographic (SSURGO) database maps.

According to the STATSGO data, the soil component in the vicinity of the Site is identified as Urban Land and is described as having a variable surface texture. The STATSGO database states that additional subordinant soil types may be present in the general vicinity of the Site. These soil types are described as mainly loamy sand and silt loam. Deeper soil types consist of very gravelly, loamy sand, unweathered bedrock and stratified sandy loam.

Additional information regarding the soil classification is also included in on Page A-4 of the Environmental Data Resources, Inc. (EDR) database report (Appendix E).

2.3.3 Groundwater

Estimated groundwater levels and flow directions may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or de-watering operations. Generally, groundwater flow typically mimics surface topography and will also tend to flow towards nearby bodies of water. Information contained in the EDR database report, the USGS Water-Table and Potentiometric-Surface Altitudes in the Upper Glacial, Magothy and Lloyd Aquifers Beneath Long Island, March-April 2006 (**Figure 5**), the USGS web site and topographic map were used to estimate groundwater depth and flow direction.

Based upon a surface elevation of 14 feet amsl, the depth to groundwater in the vicinity of the Site is approximately 10 feet below grade surface (bgs). Groundwater is expected to flow to the northwest consistent with the regional trend.

2.3.4 Radon Risk

Radon is a colorless, radioactive, inert gas formed by the decay of radium and may be present in soils and rocks containing granite, shale, phosphate and pitchblende. The USEPA's Map of Radon Zones for New York State, September 1993, indicates that the Brooklyn area is not a radon risk area. The EDR

report provides information from the New York State Department of Health (NYSDOH) radon survey which indicates that 51 radon tests have been conducted in Kings County. Test results indicate average radon concentrations of 0.750 pCi/L (first floor level) and 1.370 pCi/L (basements). Based on these data, radon does not likely represent an environmental concern.

3.0 PROPERTY USAGE

3.1 Current Property Usage

The property is currently a vacant lot and Site topography is generally level. Vehicles were observed to be parked on the lot. The south, west and east sides of the Site are secured with a chain link fence.

A review of New York City Department of Buildings (NYCDOB) records and the NYC Department of City Planning Zoning map indicates that the Site is zoned R7A residential (**Figure 5**), and has been since at least December 2009.

3.2 Current Usage of Adjoining/Surrounding Properties

A summary of the uses of the surrounding/adjacent properties is described below. Photos of the exterior of adjacent properties are attached in **Appendix A**.

Surrounding Property Usage

Direction	Property Description
North	a vacant lot and a commercial building (30 Bartlett Street)
South	Whipple Street, beyond which is residential buildings
East	A park
West	Vacant land

3.3 Historical Usage of Site and Surrounding Properties

Historical sources researched to determine past usage of the Site and surrounding properties are as follows:

Sanborn Fire Insurance Maps - Sanborn fire insurance maps for the Site and surrounding area were reviewed for the years 1887, 1904, 1918, 1935, 1947, 1950, 1965, 1977, 1979, 1980, 1981, 1982, 1984, 1986, 1987, 1989, 1991, 1992, 1993, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006 and 2007. The review is summarized in Section 3.3.1. Copies of Sanborn maps are included as **Appendix C**.

City Directory Abstract - A directory of historical telephone listings at the Site and surrounding properties were reviewed from approximately five year intervals for the years 1928 through 2007. The review is summarized in Sections 3.3.2 below. A copy of the City Directory is included in **Appendix D**.

3.3.1 Sanborn Fire Insurance Maps - Site and Adjacent Properties

The historical usage of the Site and adjacent properties, identified through Sanborn map review, is summarized below:

1887

Subject Site:

The Site is developed with four (4) residential and commercial building and two small sheds.

Adjacent properties:

The property adjacent to the north appears to be developed with residential buildings. The property adjacent to the east and west appears to be developed with mixed use commercial and residential buildings. Whipple Street borders the Site to the South, beyond which is developed with commercial and residential buildings.

1904

Subject Site:

The Site is developed with three (3) mixed use commercial and residential structures.

Adjacent properties:

The surrounding properties remain consistent with the 1887 Sanborn map.

1918

Subject Site:

The site remains consistent with the 1904 Sanborn map.

Adjacent properties:

The properties adjacent to the south, east and west remain consistent with the 1904 Sanborn map. The properties adjacent to the north are developed with commercial and residential buildings. The commercial building is occupied by a bottling works company.

1935

Subject Site:

The Site remains consistent with the 1918 Sanborn map.

Adjacent properties:

The properties adjacent to the north, west and south remain consistent with the 1918 Sanborn map. The property adjacent to the east appears to be developed with a commercial building which is occupied a woodworking company.

1947-1950

Subject Site:

The Site remains consistent with the 1935 Sanborn map

Adjacent properties:

The properties adjacent to the north, south and west remain consistent with the 1935 Sanborn map. The property adjacent to the east is developed with a commercial building occupied by a laundry facility.

1965

Subject Site:

The site remains consistent with the 1950 Sanborn map.

Adjacent properties:

The properties adjacent to the west, north and south remain consistent with the 1950 Sanborn map. The property adjacent to the east is vacant land.

1977-1980

Subject Site:

The Site appears to be developed with one residential building.

Adjacent properties:

The surrounding properties remain consistent with the 1965 Sanborn map.

1981-2007

Subject Site:

The Site appears to be vacant land.

Adjacent properties:

The property adjacent to the north is developed with a garage. The properties adjacent to the east and west are vacant land. The property adjacent to the south is not visible on this Sanborn map.

The Sanborn maps did not note the presence a gasoline storage tanks or other environmental concerns associated with the Site.

3.3.2 City Directory Listings

EDR conducted a search and provided copies of available historical city directory listings for the subject and adjacent properties. The historical city directory listings (**Appendix D**) were reviewed, to identify information regarding past uses of the subject and surrounding properties to determine if historical usage represented a REC to the subject property.

Historical city directory information is summarized as follows:

Date	Property Information
1934	Subject Property: Names associated with residential occupancy (5) Adjacent Properties: Address not listed in research source
1970	Subject Property: Names associated with residential occupancy (5 and 9) Adjacent Properties: Address not listed in research source
1973	Subject Property: Names associated with residential occupancy (5 and 9) Adjacent Properties: Address not listed in research source
1976	Subject Property: Names associated with residential occupancy (5) Adjacent Properties: Address not listed in research source
2005	Subject Property: Star Car Rental and Allen Jarvis AV (11) Adjacent Properties: Address not listed in research source
2002	Subject Property: Address not listed in research source Adjacent Properties: Flushing Supply Corp (670 Flushing)
2007	Subject Property: Address not listed in research source Adjacent Properties: Flushing Supply Corp (670 Flushing)

Information regarding additional surrounding properties identified on the City Directory search is included with the search in **Appendix D**. The city directory indicated that the Site was occupied by residential tenants from 1934 to at least 1976. In 2005, the Site was occupied by a commercial car rental AV.

3.3 Site History Summary

EBC was able to establish a history for the property dating back to 1887. In 1887, the Site was developed with four (4) mixed use commercial and residential buildings and two (2) small sheds. From 1904 to 1965, the Site is developed with three (3) five-story mixed use commercial and residential buildings. From 1977 to 1980, the Site was developed with one three-story residential building. From 1981 to present the Site has been vacant land. In 2005, the site was occupied by a car rental company, Star Car rental and Allen Jarvis

4.0 USER PROVIDED INFORMATION

4.1 Title Records

As of the date of this report the user has not requested that EBC perform a title search.

4.2 Environmental Liens

An environmental lien is a charge, security or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup or other remediation of hazardous substances or petroleum products upon a property, including, but not limited to, liens imposed pursuant to CERCLA 42 USC § 9607 (1) & 9607(r) and similar state and local laws.

The user has not made EBC aware of any environmental liens against the Site and has not requested that EBC perform an environmental lien search for the Site.

4.3 Specialized Knowledge

The user has not made EBC aware of any specialized knowledge regarding the chemicals or processes formerly in use at the Site or surrounding property.

4.4 Commonly Known or Reasonably Ascertainable Information

The user has not made EBC aware of any commonly known or reasonably ascertainable information regarding the past uses of the Site, specific chemicals in use at the Site or any spills, chemical releases or environmental cleanups at the Site.

4.5 Valuation Reduction for Environmental Issues

The user has not made EBC aware of any valuation reduction regarding the sale price of the property.

4.6 Owner, Property Manager and Occupant Information

According to New York City Department of Finance records, the current owner of the site is identified as 11 Whipple Street Realty.

4.7 Reason for Performing Phase I ESA

The Phase I ESA was performed to identify recognized environmental conditions at the Site as part of the due diligence to support the acquisition of the property by The Rabsky Group.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources

Environmental Data Resources (EDR) of Southport, Connecticut was retained to provide a computerized database search of the project area within an ASTM-standard radius of the Site. A list of the databases searched and the search radius is shown on the summary table below. EBC reviewed the database output to determine if the property appears on any of the regulatory agency lists. Detailed information concerning each database list is provided in the EDR report (**Appendix E**). A summary of standard environmental record sources researched is as follows:

5.1.1 Federal Databases

The table below summarizes the Federal databases that were searched.

Federal Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
USEPA	National Priority List	NPL	1.0 mile
USEPA	National Priority List Deletions	Delisted NPL	1.0 mile
USEPA	Comprehensive Environmental Response Compensation and Liability Act Registry	CERCLIS	0.5 mile
USEPA	CERCLIS No Further Remedial Action Planned	CERCLIS-NFRAP	0.5 mile
USEPA	Resource Conservation and Recovery Act Corrective Action Activity	CORRACTS	1.0 mile
USEPA	Resource Conservation and Recovery Act Treatment/Storage/Disposal Facilities	RCRA TSD	0.5 mile
USEPA	Resource Conservation and Recovery Act Small/Large Quantity Hazardous Waste Generators	RCRA SQG/LQG	Site and Adjoining
USEPA	Federal Institutional/Engineering Control registries	US INST/ENG Controls	Site
USEPA	Emergency Response Notification System	ERNS	Site
USEPA	Superfund (CERCLA) Consent Decrees	CONSENT	1.0 mile
USEPA	Records of Decision	ROD	1.0 mile
USEPA	Mines Master Index	MINES	0.25 mile

Federal NPL List - The National Priority List (NPL) is the United States Environmental Protection Agency (USEPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the federal Superfund Program.

Findings: The Site is not listed as an NPL facility. No NPL sites were identified within a 1-mile radius of the Site.

Federal Delisted NPL List – NPL Delisted Sites are former NPL sites that have been remediated and removed from the USEPA’s priority list. Sites are deleted where the USEPA has determined that no further response is appropriate.

Findings: The Site is not identified as a Delisted NPL facility. There were no Delisted NPL sites identified within a one-mile radius of the Site.

Federal CERCLIS List - The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the USEPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

Findings: The Site is not listed as a CERCLIS facility. No CERCLIS site within a half-mile radius of the Site.

Federal CERCLIS-NFRAP List – No Further Remedial Action Planned (NFRAP) sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of USEPA’s knowledge, assessment at a site has been completed and that USEPA has determined no further steps will be taken to list this site on the National Priorities List (NPL).

Findings: The Site is not listed as a CERCLIS-NFRAP facility. Two (2) CERCLIS-NFRAP sites were identified within a 1/4 mile radius of the Site. These sites are located in excess of ¼-mile from the Site and are hydraulically cross-gradient from the Site. Based on the relative distance from the Site and inferred direction of groundwater, these sites are not expected to represent a significant environmental concern.

Federal RCRA CORRACTS List - The RCRA Corrective Actions (CORRACTS) database is the USEPA’s list of hazardous waste treatment, storage or disposal facilities subject to corrective action under RCRA.

Findings: The Site is not listed as a RCRA CORRACTS facility; (2) RCRA CORRACTS sites were identified within a one mile radius of the Site. These sites are not located adjacent to the Site and are hydraulically cross-gradient from the Site. Based on the relative distance and inferred direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

Federal RCRA Treatment, Storage and Disposal Facilities - The USEPA Resource Conservation and Recovery Act (RCRA) program identifies reporting facilities that treat, store or dispose of hazardous waste.

Findings: The Site is not listed as a RCRA TSDF and no TSDFs were identified within a ½ mile radius of the Site.

Federal RCRA Generators - The RCRA Generators database is a compilation of reporting facilities that generate hazardous waste. A LQG is a site which generates more than 1,000 kilograms (kg) of hazardous waste during any one calendar month and can store waste on-site for up to 90 days. A SQG is a site which generates more than 100 and less than 1,000 kg of hazardous waste during any one calendar month and accumulates less than 6,000 kg of hazardous waste at any time; or a site which generates less than 100 kg of hazardous waste during any one calendar month and accumulates less than 1,000 kg of hazardous waste at any time. A CESQG is a site which generates less than 100 kg of hazardous waste or less than one kg of acutely hazardous waste during any one calendar month. A NonGen site is a former registered/regulated generator which does not presently generate hazardous waste.

Findings: The Site is not listed as a RCRA-LQG, RCRA-SQG, RCRA-NonGen facility or RCRA-CESQG. Four (4) RCRA-LQG, six (6) RCRA-SQG, seven (7) RCRA-CESQG and thirteen (13) RCRA NonGen facilities were identified within a 1/4 mile radius of the Site. None of these sites are located adjacent to the Site. According to the EDR database, no violations are listed or corrective action has been taken for the listed violations. Based on this information, these sites are not expected to represent a significant environmental concern.

Federal Institutional/Engineering Controls – Federal Institutional/Engineering Controls databases list sites with institutional/engineering controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Findings: No Federal Institutional/Engineering Controls were listed for the Site and no sites were identified within a ½ mile radius of the Site.

Federal Emergency Response Notification System - The Emergency Response Notification System (ERNS) is national database used collect information on reported releases of oil or hazardous substances.

Findings: Neither the Site nor the adjacent properties were identified in the ERNS databases.

Federal Superfund Consent Decrees - The Superfund Consent Decrees (CONSENT) list identifies major legal settlements that establish responsibility and standards for cleanup at NPL sites.

Findings: Neither the Site nor any property within one mile of the Site is identified in the CONSENT database.

Federal Records of Decision - Record of Decision (ROD) documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.

Findings: Neither the Site nor any property within one mile of the Site is identified as a ROD site.

Federal Master Mines Index - The Master Mines Index (MINES) file contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Findings: The Site is not listed as a MINES sites. One (1) property within ¼ mile of the Site is listed in the MINES database. This site is located within 1/8 mile of the Site and is further discussed below:

Pfizer Inc at 13 Bartlett Street is located 456 feet to the west (hydrologically cross-gradient) of the subject property. This site is identified with a Mine identity number of 3000319. According to the database, the operation class for this property is “non-mining”. This site was also identified as a CORRACTS site and has been discussed in prior sections. Based on the nature of the listing and assumed direction of groundwater flow, this listing does not represent a significant environmental concern.

5.1.2 New York State Databases

The table below summarizes the State databases that were searched.

New York State Databases Searched

Agency	Listing Name or Database Searched	Abbreviation	Search Distance
NYSDEC	Inactive Hazardous Waste Disposal Sites in New York State	SHWS	1.0 mile
NYSDEC	Solid Waste Facility Register	SWF	0.5 mile
NYSDEC	Registered Recycling Facilities	SWRCY	0.5 mile
NYSDEC	Registered Waste Tire Storage Facilities	SWTIRE	0.5 mile
NYSDEC	Leaking Underground Storage Tank Sites	LTANKS	0.5 mile
NYSDEC	Petroleum Bulk Storage (PBS)	UST/AST	Site and Adjoining
NYSDEC	Chemical Bulk Storage (CBS)	CBS AST/UST	Site and Adjoining
NYSDEC	Institutional/Engineering Control registries	INST/ENG Controls	Site
NYSDEC	Voluntary Cleanup Agreements	VCP	0.5 mile
NYSDEC	Brownfield sites	Brownfields	0.5 mile
NYSDEC	Major Oil Storage Facilities	MOSF	0.5 mile
NYSDEC	New York State Spills	NYSPILLS	0.125 mile
NYSDEC	Dry Cleaner Site	Drycleaners	0.25 mile

NYS Inactive Hazardous Waste Disposal Sites - The New York State Department of Environmental Conservation (NYSDEC) maintains a state priority list of Inactive Hazardous Waste Disposal Sites (SHWS) considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment. Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance/waste sites.

Findings: The Site is not listed as a SHWS site. No SHWS facilities were identified within a one mile radius of the Site.

Hazardous Substance Waste Disposal Sites - The Hazardous Substance Waste Disposal Sites (HSWDS) list includes any known or suspected hazardous substance waste disposal sites. Also included are sites de-listed from the Registry of Inactive Hazardous Waste Disposal Sites list and non-Registry sites that USEPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared.

Findings: The Site is not listed as on the HSWDS database. Two (2) HSWDS sites were identified within a one-half mile radius of the Site. These sites are located in excess of ¼ mile from the Site. Based on the relative distance, these sites are not expected to represent a significant environmental concern.

NYS Landfill - The NYSDEC Solid Waste Facility Register records contain an inventory of solid waste disposal facilities or landfills in New York State.

Findings: The Site is not listed as a landfill facility and two (2) landfill sites were identified with half-mile radius of the Site. These sites are located in excess of ¼-mile from the Site. Based on the relative distance and inferred direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

NYS Registered Recycling Facilities - The Registered Recycling Facilities List (SWRCY) is a NYSDEC list of recycling facilities.

Findings: The Site is not listed as a SWRCY site. No SWRCY sites were identified within a ½ mile radius of the Site.

NYS Registered Waste Tire Storage Facilities - The Registered Recycling Facilities List (SWTIRE) is a NYSDEC list of Registered Waste Tire Storage & Facility List.

Findings: The Site is not listed as a SWTIRE site. There were no SWTIRE sites identified within a ½ mile radius of the Site.

NYS Leaking Underground Storage Tank Sites - The Leaking Underground Storage Tank Sites (LTANKS) database contains a NYSDEC inventory of reported leaking storage tank incidents. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Findings: The Site is not identified as a LTANKS site. However, thirty-five (35) LTANK sites were identified within ½ mile of the Site. None of these sites is located adjacent to the Site. All of the sites within 1/8-mile of the Site have received closure. The remaining sites located greater than 1/8 mile of the Site, have received closure from the NYSDEC and/or a willing and responsible party has been identified and corrective action has been taken. Based on this information, these LTANKS sites are not expected to present a significant environmental concern to the Site.

NYS Petroleum Bulk Storage - The NYSDEC Petroleum Bulk Storage - Underground Tanks (UST) database lists facilities with a petroleum storage capacity of more than 1,100 gallons and less than 400,000 gallons. The NYSDEC Petroleum Bulk Storage - Aboveground Tanks (AST) database lists facilities with registered above ground storage tanks.

Findings: The Site is not listed as a UST or a Hist UST site. The Site is not listed as a AST or Hist AST site. Thirteen (13) UST sites, five (5) HIST UST sites, and fifteen (15) AST sites are registered within a ¼ mile radius of the Site. None of the UST, Hist UST or AST sites are located adjacent to the Site. Properties with registered ASTs or USTs do not necessarily pose a hazard unless the tanks are leaking or a spill occurs. Most tanks in the area hold home heating oil for on-site boilers and furnaces. Sites with leaking tanks or spills are addressed in the appropriate section.

NYS Chemical Bulk Storage - The Chemical Bulk Storage (CBS) database is a NYSDEC list of facilities that store regulated hazardous substances in aboveground tanks (AST) with capacities of 185 gallons or greater or underground tanks (UST) of any size.

Findings: The Site is not identified as a CBS facility. No CBS-UST sites were identified and one (1) CBS-AST site and one (1) CBS site (both listings for the same property) was identified

within a 1/8 mile radius of the Site. This site is located down-gradient to the Site and no violations or releases of hazardous materials were identified in connection with this property. Based on this information, this property is not expected to represent a significant environmental concern.

NYS Institutional/Engineering Controls – NYSDEC list of Environmental Remediation sites with Institutional or Engineering Controls in place.

Findings: Neither the Site nor any site within a ½ mile of the Site was identified in the NYSDEC Institutional/Engineering Controls databases.

NYS Voluntary Cleanup Agreements - The NYSDEC Voluntary Cleanup Program (VCP) database identifies hazardous waste sites undergoing private sector cleanup as part of redevelopment.

Findings: The Site was not identified as a VCP site. Three (3) VCP sites were identified within a one-half mile radius of the subject property. None of these sites are located adjacent to the Site and are all located hydraulically down or cross gradient from the Site. Based on the relative distance from the Site and inferred direction of groundwater flow, these sites are not expected to represent a significant environmental concern.

NYS Brownfields - A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.

Findings: The Site was not identified as a Brownfield site. One (1) Brownfield site is located within 1/4 mile of the Site. This site is located in excess ¼-mile from the Site and are hydraulically down-gradient. Based on this information, this site is not expected to represent a significant environmental concern.

NYS Major Oil Storage Facilities - The NYSDEC Major Oil Storage Facilities (MOSF) database lists facilities or vessels with a petroleum storage capacity of more than 400,000 gallons.

Findings: The Site was not identified as an MOSF. No MOSF UST sites or MOSF AST sites were identified within ½ mile of the Site.

NYS Spills - The New York State Spills Information Database (NY SPILLS) contains data collected on chemical and petroleum spill incidents reported to NYSDEC since April 1, 1986.

Findings: The Site is not listed within either the NY SPILLS or NY Hist SPILLS databases. However, twenty-three (23) spill sites were identified within $\frac{1}{8}$ mile of the Site. All of the sites have received closure with the exception of one site.

Amoco is located at 665 Flushing Avenue, approximately 328 feet west southwest (hydraulically cross gradient from the Site. According to the regulatory database, a release occurred on July 30, 2001 from pipe runs discovered in 1984. In 1990, twelve (12) 550-gallon gasoline USTs were removed and replaced with a new 4,000-gallon double walled UST. Several rounds of soil and groundwater sampling have occurred for this site and samples indicate contaminated soil is present. Based on the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern.

MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSDF.

Findings: The Site is not listed as a MANIFEST site. Twenty nine (29) manifest sites were identified within a $\frac{1}{4}$ mile radius of the Site. These sites are not located adjacent to the Site. Documentation of proper storage, transfer, and disposal of hazardous materials is not considered to represent a significant environmental concern.

Drycleaner Sites - The NYSDEC maintains a listing of all registered drycleaners. Drycleaner sites do not necessarily pose a hazard unless a spill occurs. Sites at which spills have been identified are addressed in the appropriate section.

Findings: The Site is not identified as drycleaner. One (1) Drycleaner site was identified within $\frac{1}{4}$ mile of the site. This site is located within $\frac{1}{8}$ mile of the Site and is not an adjacent property. This listing is further discussed in detail below:

Harrison Dry Cleaners at 209 Harrison Avenue # A is located 374 feet to the west

(hydraulically cross-gradient) of the Site. According to the database, registration as a dry cleaner has been effective since August 5, 2005 and an onsite inspection was conducted at this property on September 17, 2007. No violations or releases of hazardous materials were identified in connection with this property. Based on this information and the assumed direction of groundwater flow, this listing is not expected to represent a significant environmental concern.

NYS Manufactured Gas Plants - Manufactured gas plants (MGP) were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar, sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Findings: The Site is not identified as an MGP site. Five (5) MGP sites were identified within a one-mile of the Site. These sites are located in excess of ½-mile from the Site. Based on the distance from the Site, these sites are not expected to represent a significant environmental concern.

E Designation - The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designation also includes a mandatory construction-related health and safety plan which must be approved by NYCDEP.

Findings: The Site was identified as an E Designation site. Fifty (50) were identified within ¼ mile radius of the Site. One (1) adjacent site was identified. The Site and adjacent property listings are further discussed below:

- The Site (Lots 45, 46, 147 Block 2272 at 5-11 Whipple Street) was identified as an E Designation site and is assigned the E number of E-238, with the descriptions of “Hazardous Materials Phase I and Phase II testing protocol”, “air quality – natural gas heat and hot water” and “window wall attenuation and alternate ventilation”. This designation came into effect on December 22, 2009. 11 Whipple Realty Corp was identified as the owner of the Site. No further information was available from the EDR database for review. This listing is further discussed in the previous sections.
- The south adjacent property at 2 Whipple Street (hydraulically cross-gradient) was identified as an E Designation site and is assigned the E number of E-238, with the descriptions of “Hazardous Materials Phase I and Phase II testing protocol”, “air quality – natural gas heat and hot water” and “window wall attenuation and alternate ventilation”. This designation came into effect on December 22, 2009. The owners name was identified as Aristides Theoharaki. No other releases or violations in connection with this site were identified during the course of this investigation. Based on this information and the fact that this site is down-gradient to the Site, this listing is not considered a REC.

The remaining listed sites are not located adjacent to the Site and/or have no violations /releases associated with them. Based on this information, these listings are not considered as RECs.

EDR Historical Auto Stations - EDR has searched selected national collections of business directories and has collected listings of potential gas station/ filling station/ service station sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include gas station/ filling station/ service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station etc.

Findings: The Site was not identified as an EDR Historical Auto Station site. Twenty two (22) sites were identified within ¼ mile of the Site. None of these sites is located adjacent to the Site. Information provided within the EDR report indicates that the remaining sites are not associated with any violations. Therefore, it is unlikely that these facilities present a

significant environmental risk to the Site, and they are not considered RECs.

EDR Historical Cleaners - EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash and dry etc.

Findings: The Site was not identified as an EDR Historical Cleaners site. Four (4) sites were identified within ¼ mile of the Site. These sites are not located adjacent to the Site and information provided within the EDR report indicates that no violations or releases of hazardous materials were identified in connection with these sites. Therefore, it is unlikely that these facilities present a significant environmental risk to the Site, and they are not considered RECs.

5.2 Additional Environmental Record Sources

5.2.1 Local Agency Review

Freedom of Information Act (FOIA) requests were sent to the New York City Department of Environmental Protection (NYCDEP), New York City Fire Department, New York City Department of Health (NYCDOH) and the New York City Fire Department (FDNY) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

5.2.2 New York City Department of Finance

The following is a summary of pertinent information obtained from the New York City Department of Finance website:

Tax Lot: Block 2272– Lot Nos. 45, 46 & 147
Address: 5-11 Whipple Street

Owner: 11 Whipple Realty Corp
Lot Size: 100 by 100 feet – rectangular
Building Class: G7- Garage / Gas Station
Zoning: Residential (R7A)

5.2.3 New York City Department of Buildings

The Department of Buildings (DOB) computerized Property Profile Overviews (PPOs) were reviewed. Pertinent information regarding Site is summarized below:

5 Whipple Street

No records were on file for this address.

7 Whipple Street

According to the PPO, two (2) actions are listed for the Site in reference to a new building (1989) and sprinklers (1990). No active violations or complaints were listed for the Site. One (1) jobs dated in 2002 listed as disapproved was on file for the Site. The Department of Finance Building Classification for the Site is G7-Garage/Gas Station. In addition the Site was identified as an E designation (Hazmat/Noise/Air) site within the NYCDOB records.

9 Whipple Street

No records were on file for this address.

11 Whipple Street

No records were on file for this address.

5.2.4 Previous Environmental Reports

A phase II investigation was performed by EBC at the Site on May 29, 2013.

Soil Sampling

Eight soil boring locations (B1 through B5 and B7) were selected to gain representative soil quality information from across the site.

All borings were advanced with Geoprobe™ direct push equipment and sampled with a 5 foot macro core sampler using disposable acetate liners. Soil was characterized by a Qualified Environmental Professional (QEP) and field screened for the presence of volatile organic compounds (VOCs) using a photo-ionization detector (PID).

At each of the soil boring locations, soil samples were collected continuously from grade to a depth of 15 feet below grade. Retrieved sample cores were field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. Soil was characterized as fill materials in the top 0-5 feet followed by silty sands and sandy clays to the termination depth.

A minimum of two soil samples were retained from the six boring locations, one surface sample representing the 0-2 foot interval and one sample at the interval(s) in which physical evidence of contamination or an elevated PID reading was observed. In the absence of such evidence samples were retained from interval representing the groundwater interface.

Groundwater Sampling

Four groundwater samples were collected to gain representative groundwater quality information from across the site. Polyethylene tubing fitted with a stainless steel check valve was used to purge and collect groundwater samples from borings B1 through B4. Sample tubing was replaced between each sample location. Groundwater was encountered at approximately 10 feet below grade.

Sample Handling and Analysis

Collected samples were appropriately packaged, placed in coolers and shipped via laboratory dispatched courier for delivery to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). Select soil samples were analyzed for volatile organic compounds (VOCs) by USEPA method 8260, semi-volatile organic Compounds (SVOCs) by USEPA method 8270 (CP-51 List), RCRA Metals and TCLP Lead. Groundwater samples were analyzed for VOCs by USEPA Method 8260.

Results

Soil sample results were compared to the Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in NYSDEC CP51 Soil Cleanup Guidance (10/21/10). Groundwater results were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater standards. One VOC was detected within one of the 14 soil samples retained. Acetone was detected slightly above Unrestricted Use SCOs in sample B7 (10-12ft). No other VOCs were detected. Four (4) SVOCs were detected above NYSDEC Restricted Residential Use SCOs in 4 of the 6 shallow soil samples and 1 deep sample. SVOC exceedences included benz(a)anthracene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The metals barium, lead and mercury were detected in shallow soil above Restricted Residential SCOs in all 6 shallow samples. Overall, these findings are consistent with observations for shallow historic fill sites in areas throughout NYC.

One VOC was detected within one of the four groundwater samples obtained. Methyl t-butyl ether (MTBE) was detected above NYSDEC groundwater standards in MW2, at a concentration of 34 µg/L. No other VOCs were detected. As MTBE was not detected in any soil samples collected from the Site, and the sample was obtained adjacent to the southern property boundary, this is indicative of an off-site source of contamination.

5.2.5 Historic Zoning Map

A review of the NYC Department of City Planning Zoning Maps for the years 1961 through 2012 indicates that the Site has been zoned residential R7A from 2009 to 2012 with the special E-238 designation showing up in the 2009 zoning maps. From approximately 1961 to 2009 the Site was zoned as manufacturing M1-2. A copy of the December 1961 zoning map is included as **Figure 5B**.

5.2.6 Activity and Use Limitations

A search was conducted for Activity and Use Limitations (AULs) associated with the subject properties, more specifically Institutional Controls (ICs) and/or Engineering Controls (ECs), which have been placed upon the property as a result of environmental issue identified at the property. In the City of New York, information on such AULs is maintained by the City of New York Department of City Planning (NYCDCP) and is commonly depicted on zoning maps with an “E” designation, as well as maintained within Chain of Title Records. For a site to be designated with an “E” restriction, several criteria must be met. First, a property must be included within a designated re-zoning area, then the property must be identified as a “Potential” or “Projected” re-development property, and finally, the

site must be listed on one or more environmental regulatory databases as listed in the ASTM standard, be adjacent to such a site, and/or have historical usage associated with hazardous materials with the potential to impact human health and/or the environment should a release have occurred. Sites with an “E” designation require additional investigation and/or remediation be performed in order to determine if the historical use of a property, typically manufacturing or chemical usage, have impacted the site. No change of use or development requiring a building permit will be issued for an “E” designated site without approval from the NYCOER.

The search for environmental liens and AULs also included a review of information available from the New York City Department of Finance, New York City DOB, the EDR database report, City of New York Environmental Quality Review Requirement Declarations, City of New York Zoning maps, and the NYCDCP and NYCOER websites. The Site was identified as an “E” designated site and is discussed in previous sections.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

Ms. Sara Babyatsky of EBC performed the site inspection on May 29, 2013, beginning at approximately 8:30 am. The reconnaissance included a visual inspection of the Site, the sidewalk immediately in front of the Site, and the exterior of adjacent properties.

Photographs taken during the inspection are attached (**Appendix A**).

6.2 Observations

The property is currently a vacant lot. Site topography is generally level. The south, west and east sides of the Site are secured with a chain link fence.

6.3 Aboveground and Underground Storage Tanks (ASTs/USTs)

EBC did not note any AST or USTs during the site inspection.

6.4 Hazardous and Non-Hazardous Chemical Storage and Disposal

EBC did not note hazardous or non hazardous chemical storage and or disposal during site inspection.

6.5 Underground Injection Control (UIC) Structures

Underground injection wells are regulated by the Underground Injection Control (UIC) Program under the authority of Part C of the Safe Drinking Water Act (SDWA) (42 U.S.C. 300h et seq.). The SDWA is designed to protect the quality of drinking water in the United States, and Part C specifically mandates the regulation of underground injection fluids through wells. The USEPA has promulgated a series of UIC regulations under this authority. Recent applicable revisions to UIC regulations were published in the State Implementation Guide - Revisions to the Underground Injection Control Regulations for Class V Injection Wells, September 2000. This document specifically addresses Class V injection wells, which include on-site wastewater disposal features such as drywells, cesspools and in-situ drains. The USEPA issued a Notice of Final Determination for Class V wells; Final Rule on June 7, 2002. With the exception of motor vehicle waste disposal wells and large-capacity cesspools, Class V wells are “authorized by rule” (40 CFR 144.24) and may inject non-hazardous waste as long as the following criteria are met:

- The injection does not endanger underground sources of drinking water (40 CFR 144.12); and
- The well owners or operators submit basic inventory information (40 CFR 144.26).

The USEPA may, at its discretion, require the owner or operator of any well authorized by rule to submit information for review to determine if a well may be endangering an underground source of drinking water. In regard to motor vehicle waste disposal wells and large capacity cesspools (those that serve more than 20 persons per day), owners and/or operators of such wells in regulated areas must close the wells or obtain a permit. These requirements are being phased-in through 2008. Owners and operators of large-capacity cesspools must close the structures by April 5, 2005.

As there are no on-site buildings, no sanitary wastewater is currently discharged from the property. The area surrounding the property is serviced by the NYC municipal sewer system.

6.6 Polychlorinated Biphenyls (PCBs)

Polychlorinated biphenyls (PCBs) were used until 1978 and are a group of compounds formed by the chlorination of biphenyl. PCBs have extremely high physical and chemical stabilities which led to their being used in many applications, including heat transfer fluids, hydraulic fluids, and dielectrics. PCBs are often found in transformers, capacitors and hydraulic systems.

Electrical equipment containing PCBs are still in use and can pose a serious health hazard if fluids come in direct contact with humans, soil or groundwater. Fires involving electrical equipment containing PCBs can cause the material to be dispersed over a large area and potentially expose many people to a health risk. Because of the health hazard associated with PCBs, they are regulated under the Toxic Substances Control Act (TSCA).

No electrical transformers or other equipment suspected to contain PCBs were identified on or adjacent to the property at the time of the site inspection.

6.7 Asbestos

Asbestos is the name given to a group of fibrous silicate minerals, typically those of the serpentine group. The tensile strength, flexibility, and non-flammability of asbestos have led to many uses including structural materials, brake linings, insulation, and pipe manufacture. Asbestos is of concern as an air pollutant because when inhaled it may cause asbestosis, mesothelioma, and bronchogenic

carcinoma. In 1989, the USEPA announced regulations that would phase out most uses of asbestos by 1996.

As part of the site inspection, a visual survey was conducted of accessible areas for the presence of suspect asbestos-containing materials (ACM). As the Site is currently vacant land, EBC did not note any suspect asbestos containing materials.

6.8 Lead-Based Paint (LBP)

In 1978, the U.S. Product Safety Commission issued a ban on paints or surface coatings that contain greater than 0.06 percent lead. As there are currently no buildings located on the Site, there was no evidence of usage of Lead Based Paints.

6.9 Mold

Concern about indoor exposure to mold has been increasing as the public becomes aware that exposure to mold can cause a variety of health effects and symptoms, including allergic reactions. Molds can be found almost anywhere; they can grow on virtually any organic substance, as long as moisture and oxygen are present. There are molds that can grow on wood, paper, carpet, foods, sheetrock, plaster and insulation. When excessive moisture accumulates in buildings or on building materials, mold growth will often occur, particularly if the moisture problem remains undiscovered or unaddressed.

As part of this assessment, a visual inspection was conducted for the presence of water damage and odors, indicative of the potential for mold growth. No visual or olfactory evidence of mold was identified at the subject property during the site inspection.

6.10 Wetlands

A review of the NYSDEC Freshwater Wetland Map, Brooklyn Quadrangle, indicates that no NYS freshwater wetlands are located within a one mile radius of the Site. ECB also reviewed NYSDEC Tidal Wetlands Maps available online at <http://twi.ligis.org>. The tidal wetlands map indicates that there are no NYS tidal wetlands located within a one-mile radius of the Site.

Potential federal wetlands were identified from the U.S. Fish and Wildlife Service (FWS) Wetlands Mapper software, which indicate that no potential federal wetlands are located within a one mile radius of the Site. Additional information obtained from the FWS website is included in **Appendix B**.

Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) were reviewed to determine if the Site is located within the 100-year or 500-year flood zones. The FIRM showing the property (No. 3604970204F) indicates that the entire property is located outside the 100-year and 500-year flood zones. This indicates that there is a minimal risk of flooding at the Site. A copy of the FEMA FIRM is included in **Appendix B**.

7.0 INTERVIEWS

7.1 Owner

EBC did not interview the owner of the Site.

7.2 Occupants

The Site is vacant land and therefore EBC did not interview any occupants.

7.3 Local Government Officials

Freedom of Information Act (FOIA) requests were sent to the NYCDEP, NYCDOH and FDNY York City Department of Health (NYCDOH) for information regarding hazardous operations and or other environmental reports/investigations for the Site, including the registration of fuel storage tanks, past spills, or violations. As of the date of this report, a response had not been received for the FOIA request. Regulatory agencies usually take six to eight weeks to process FOIA requests. Any pertinent information received will be reviewed and forwarded upon receipt. Copies of FOIA requests and regulatory agency responses are included in **Appendix B**.

8.0 FINDINGS AND OPINIONS

Based upon reconnaissance of the Site and surrounding properties, interviews and review of historical records and regulatory agency databases, **No recognized environmental conditions were identified** in connection with the Site.

However, the following environmental issue was identified:

8.1 Additional Environmental Issues

The Site is identified as having a E designation (E-238) for Hazmat/Noise/Air. The property was assigned an E-designation during the Broadway Triangle action completed by the City in December 22 2009. The E-designation requires an environmental review and issuance of a Notice to Proceed before the property can be redeveloped. The E-designation does not affect current use of the property.

9.0 CONCLUSIONS AND RECOMMENDATIONS

EBC performed a Phase I Environmental Site Assessment in conformance with the scope and limitations as described under ASTM Practice E1527-05 for the commercial property identified by the street addresses of 5-11 Whipple Street, Block 2272 Lot Nos. 45, 46 and 147 in Brooklyn, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.4** of this report. Based upon reconnaissance of the subject and surrounding properties, interviews and review of historical records and regulatory agency databases, this assessment has revealed no recognized environmental conditions in connection with the Site.

As noted previously the property was assigned an E-designation for Hazmat during the Broadway Triangle action completed by the City in December 22, 2009. The E-designation requires an environmental review and issuance of a Notice to Proceed by the NYC Office of Environmental Remediation (OER) before the property can be redeveloped.

10.0 DEVIATIONS

This Phase I ESA was conducted in accordance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard E 1527-05 (Standard Practices for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and 40 CFR Part 312 (Standards and Practices for All Appropriate Inquiry; Final Rule). Excluding additional services outlined in Section 11.0, there were no deviations or deletions from this practice.

11.0 ADDITIONAL SERVICES

EBC has included, in addition to those items outlined by ASTM E 1527-05, a general evaluation of the following is a list of non-scope considerations, which may be addressed, in a limited capacity within this Phase I Environmental Site Assessment:

- Radon;
- Lead-based Paint;
- Asbestos-containing Materials; and
- Wetlands.

13.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

PROFILE

Mr. Sosik has 24 years of experience in environmental consulting. He specializes in advising clients on managing environmental compliance with federal, state, and municipal agencies and has successfully directed numerous investigation and remediation projects involving petroleum, pesticides, chlorinated solvents, heavy metals and radiologically activated media. His work included extensive three-dimensional investigations on MTBE, which have been used effectively to help shape public policy. He also has experience in applying models to groundwater related problems and has completed several large-scale projects to determine fate and transport of contaminants, establish spill scenarios, and closure criteria. His experience and expertise in the area of contaminant hydrogeology has resulted in requests from environmental attorneys, property owners and New York State to serve as an expert witness and technical advisor on a variety of legal disputes.

For the past 10 years Mr. Sosik has been primarily engaged in providing environmental consulting to developers responding to the extensive rezoning of former industrial and commercial properties, which is currently taking place throughout New York City. These services include everything from pre-purchase evaluations and contract negotiations to gaining acceptance in and moving projects through the NYS Brownfields Program. Mr. Sosik has taken a pro-active role in the continued development of the NYS Brownfields Program and related policy, by attending numerous working seminars, active participation in work groups and task forces and by providing commentary to draft versions of new guidance documents. Throughout his professional career, Mr. Sosik has remained committed to developing innovative cost- efficient solutions to environmental issues, specifically tailored to the needs of his clients.

SELECTED PROJECTS

Scavenger Waste Treatment Facility (SWTF), Suffolk County, NY

Water Treatment Plant EIS - Focused EIS - In response to requests from the Suffolk County Council on Environmental Quality and the Brookhaven Conservation Advisory Council, Mr. Sosik prepared a focused EIS to evaluate the potential impacts to an important surface water resource from the proposed facility including cumulative and synergistic effects with established contaminant plumes in the area.

Advanced Residential Communities, Rockville Centre, NY

Brownfield Project – As the senior project manager on this large scale, high profile redevelopment project, Mr. Sosik was asked to develop a plan to accelerate the regulatory process in the face of general community opposition. Through numerous discussions with the BCP management team, He was able to condense the schedule and review period, through the submission of supporting documents (Investigation Report, Remedial Work Plan) with the BCP application package. Community opposition, which focused on the environmental condition of the site as a means to block the project, was used to advantage in expediting approval of the aggressive interim remedial

plan. This will allow the developer to begin remedial work approximately 5 months ahead of schedule.

Former Temco Uniform site, West Haverstraw, NY

Brownfield Project – Mr. Sosik took over management of this project from another consultant following transition of this VCP site to the BCP. Mr. Sosik used the opportunity to renegotiate and revise the scope of work to allow a more cost effective and focused investigation plan without re-writing or resubmitting the RIWP. During the NYSDEC's review of the transition package, he met with and coordinated changes with the NYSDEC Project Manager to gain approval. The result saved the client a significant amount of money, but perhaps more importantly in this case, did so without loss of time.

Grovick Properties, Jackson Heights, NY

Brownfield Project – This Brownfield property is somewhat unique in that it had been investigated and partially remediated by the NYSDEC through the petroleum spill fund. The client was interested in purchasing the property and redeveloping it as office and retail space. Mr. Sosik reviewed the NYSDEC investigation and developed a

Charles B. Sosik, PG, PHG, Principal

supplemental plan to meet the requirements of an RI under the BCP program. By performing this limited amount of field work "up-front" he was able to complete an RI Report and Remedial Plan and submit both with the BCP application package. The NYSDEC and NYSDOH approved the RI Report and the Remedial Plan with minor changes. This cut 120 days from the review process and allowed the client to arrange financing and move his project forward knowing what the clean-up costs would be at the outset.

Metro Management, Bronx, NY

Brownfield Project – The site of a former gas station, the developer had planned to construct a 12-story affordable housing apartment complex with first floor retail space. Since the site was located in an Environmental zone, potential tax credits of 22% for site development, remediation and tangible property could be realized under the BCP. In a pre-application meeting with the NYSDEC, Mr. Sosik realized that the department did not believe the site was eligible for the BCP, since it had been previously investigated and closed under the spills program.

Mr. Sosik assisted the developer in securing financing, and due to the demands of an aggressive construction schedule developed an Interim Remedial Measure (IRM), based on chemical oxidation treatment. Working closely with the clients environmental counsel, Mr. Sosik was able to get the IRM approved without a public comment period. Implementation of the IRM is currently underway.

The project was awarded the 2009 NYC Brownfield Award for Innovation.

Brandt Airflex, NY

Technical Consulting Services - Mr. Sosik provided senior level technical advice and strategic planning in developing an off-site RI/FS for the site, in negotiating a tax reduction for the property due to the environmental condition and in preparing a cost to cure estimate for settlement between business partners. After achieving a favorable tax consideration and settlement agreement for his client

Allied Aviation Services, Dallas, Fort Worth, Airport, Dallas, TX

Jet Fuel Investigation - Mr. Sosik developed and managed an investigative plan to quickly identify the extent and source of jet fuel which was discharging from the Airport's storm drain system to a creek a mile away. Through the use of a refined conceptual model, accelerated investigative techniques and a flexible work plan, he was able to identify the source of the fuel and the migration route within a single week. He then identified remedial options and successfully negotiated a risk based plan with the Texas regulatory agency that had issued a notice of enforcement action against the facility.

KeySpan – Former LILCO Facilities, Various NY Locations

Pesticide Impact Evaluation - Mr. Sosik developed, negotiated and implemented a site screening procedure to evaluate impact to public health and the environment as the result of past herbicide use at 211 utility sites. Using an unsaturated zone leaching model (PRZM) on a small subset of the sites, he was able to establish mass loading schedules for the remaining sites. This was combined with public well data in a GIS environment to perform queries with respect to mass

loading, time transport and proximity to vulnerable public supply wells. Using this approach Mr. Sosik was able to show that there were no concerns for future impact. This effort satisfied the public health and resource concerns of the state environmental agency and county health department in a reasonable amount of time and at a fraction of the cost of a full scale investigation.

Former Computer Circuits (Superfund) Site, Hauppauge, NY

CERCLA RI/FS - As Senior Project Manager for the site, he played a major role in regaining control of the investigation activities for the PRP. This action prevented the USEPA from initiating an extensive investigation at the site using a RAC II contractor allowing the client to perform a more efficient investigation. He was involved in all negotiations with EPA and was the project lead in developing a revised site characterization plan (work plan, field sampling plan, quality assurance plan, etc.). By carefully managing all phases of the investigation and continued interaction with each of the three regulatory agencies involved, Mr. Sosik was able to keep the project focused and incrementally reinforce the clients position. The estimated cost of the revised investigation is expected to save the client 1.5 to 2 million dollars.

Sun Oil, Seaford, NY

Remediation Consulting Services & Project Management - Under an atmosphere of regulatory distrust, political pressure and mounting public hostility toward the client, Mr. Sosik conducted an off-site 3-D investigation to define the extent of contamination and the potential impact on public health. By designing and implementing an aggressive source area remediation program and personal interaction with the public and regulatory agencies, he was able to successfully negotiate a limited off-site remediation favorable to the client. Source area remediation was completed within 6 months and the project successfully closed without damage to the client's public image or working relationship with the regulatory agencies.

Con Edison, Various Locations, NY

Hydrogeologic Consulting Services - Under a general consulting contract, Mr. Sosik conducted detailed subsurface hydrogeologic investigations at five locations to assist in the development of groundwater contingency planning. He also developed and implemented work plans to investigate and remediate existing petroleum, cable fluid, and PCB releases at many of the generating facilities and substations. An important aspect of his role was in assisting the client in strategic planning and negotiations with the regulatory agency.

Keyspan - Tuthill Substation, Aqueboque, NY

Accelerated Site Characterization - Using accelerated site characterization techniques, Mr. Sosik presented the project as a case study in establishing the transport of an herbicide and its metabolites applied at utility sites in the 1980's. The results were then used to establish a screening method for evaluating 211 similar sites controlled by the client in a reasonable and efficient manner.

NYSDEC Spill, East Moriches, NY

Spill Release Analysis - With recognized expertise in the area of gasoline plume development on Long Island, Mr. Sosik was asked by

Charles B. Sosik, PG, PHG, Principal

the State to establish the release date (and principal responsible party) of an extensive petroleum spill, which impacted a residential neighborhood. He used multiple lines of evidence, and a new EPA model (HSSM), which he has helped to refine, to reconstruct the release scenario and spill date, in support of the State Attorney General's cost recovery effort from the PRP.

Minmilt Realty, Farmingdale, NY

Fate & Transport Modeling - He completed an RI/FS at this location for a PCE plume that had been in transit for over 30 years. Mr. Sosik applied a conservative model to evaluate time/concentration impacts under a variety of transport scenarios to a municipal wellfield located 13,000 feet away. Through the use of the model and careful interpretation of an extensive data set compiled from several sources, Mr. Sosik was able to propose a plan which was both acceptable to the regulator and favorable to the client.

Sebonack Golf Course Project, Town of Southampton, NY

IPM Pesticide Study - Provided professional hydrogeologic services in support of the EIS prepared for the development of the site. The proposed development included an 18-hole golf course, clubhouse, dormitory facility, cottages, associated structures, and a 6,000 square foot research station for Southampton College. Mr. Sosik performed an extensive evaluation (using a pesticide-leaching model) on the effects of pesticide and nitrogen loading to groundwater as part of the projects commitment to an Integrated Pest Management (IPM) approach.

NYSDEC, Spills Division, Regions 1 - 4

Petroleum Spills Investigation & Remediation - As a prime contractor/consultant for the NYSDEC in Regions 1-4, Mr. Sosik has managed the investigation and remediation of numerous petroleum spills throughout the State. Many of these projects required the development of innovative investigation and remediation techniques to achieve project goals. He was also involved in many pilot projects and research studies to evaluate innovative investigation techniques such as accelerated site characterization, and alternative approaches to remediation such as monitored natural attenuation and risk based corrective action.

Sun Oil, E. Meadow, NY

Exposure Assessment - Performed to seek closure of the spill file, despite the presence of contaminants above standards, Mr. Sosik determined after the extended assessment that the level of remaining contamination would not pose a future threat to human health or the environment. He used multiple lines of evidence, and a fate and

transport model to show that degradation processes would achieve standards within a reasonable time.

Sand & Gravel Mine, NY

Property Development - As part of the development of a sand and gravel mine, Mr. Sosik provided environmental consulting services to assist in obtaining a mining permit, which would result in the construction of a 150-acre lake. Specifically, Mr. Sosik investigated if the proposed lake would reduce groundwater quantity to domestic and public well fields, and/or accelerate the migration of potential surface contaminants to the lower part of the aquifer. After assuming the lead role in negotiations with the regulatory agency, Mr. Sosik was able to obtain a permit for the client by adequately addressing water quality and quantity issues, and by preparing a monitoring plan and spill response plan, acceptable to all parties.

NYSDEC, Mamaroneck, NY

Site Characterization / Source Identification - In a complex hydrogeologic setting consisting of contaminant transport through fractured metamorphic bedrock and variable overburden materials, Mr. Sosik was able to develop and implement a sub-surface investigation to differentiate and separate the impact associated with each of two sources. The results of this investigation were successful in encouraging the spiller to accept responsibility for the release.

Riverhead Municipal Water District, NY

Site Characterization / Remedial Planning - Using accelerated characterization techniques, he implemented a 3-D site investigation to identify two service stations 4,000 ft. away as the source of contamination impacting a municipal wellfield. In accordance with the strict time table imposed by the need to return the wellfield to production by early spring, he designed and implemented a multi-point (9 RW, 6 IW) recovery and injection well system using a 3-d numerical flow model, and completed the project on time. Using a contaminant transport model, Mr. Sosik developed clean-up goals which were achieved in 9 months of operation, well below the projected 3 to 5 year project duration.

Montauk Fire Department, NY

Site Assessment - Mr. Sosik performed a limited investigation and used a 2-D flow model to demonstrate that the property could not have been the source of contamination which had impacted an adjacent wellfield as per the results of a previous investigation. This small focused effort successfully reversed a \$500,000, and rising, claim against the department by the water district and the NYSDEC.

PREVIOUS EXPERIENCE

P.W. Grosser Consulting, Bohemia, NY

Senior Project Manager, 1999-2006

Environmental Assessment & Remediation, Patchogue, NY

Senior Project Manager, 1994-1999

Miller Environmental Group, Calverton, NY

Project Manager, 1989-1994

DuPont Biosystems, Aston, PA

Hydrogeologist, 1988-1989

EXPERT WITNESS TESTIMONY AND DEPOSITIONS

Fact Witness -Testimony on relative age of petroleum spill based on nature and extent of residual and dissolved components at the Delta Service Station in Uniondale, NY Fall/1999

Expert Witness / Expert Report for defendant in cost recovery case by NYS Attorney General regarding a Class II Inactive Hazardous Waste (State Superfund) project by the NYSDEC (October 2004 – present, Report: March 2005, Deposition: April 2005)

Expert Witness / Fact Witness for plaintiff seeking compensation for partial expenses incurred during the investigation and remediation of a USEPA CERCLA site due to the release and migration of contaminants from an "upgradient" industrial property. (Deposition May 2005, case settled April 2007).

Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Holtzville, NY (Deposition April 2005 - case settled).

Expert Witness – Statement of opinion and expert testimony at trial for plaintiff seeking damages from a major oil corporation for contamination under a prior leasing agreement in Rego Park, NY. Case decided in favor of plaintiff. Trial July 2007, in favor of Plaintiff. Qualified as Expert Witness.

Expert Witness / Fact Witness for NYS Attorney General with respect to cost recovery for a NYSDEC petroleum spill site in Lindenhurst, NY (Trial date December 2009, in favor of plaintiff. Qualified as Expert Witness.

Expert Witness / Fact Witness for defendant with respect to cost recovery and third party responsibility for a NYSDEC petroleum spill site. (Expert Statement of Fact – October 2005).

Expert Witness for plaintiff seeking damages related to a petroleum spill from the previous owner/operator of a gas station in College Point, NY. Case settled 2009.

Expert Witness for plaintiff (municipal water supply purveyor) seeking damages from major oil companies and manufacturer of MTBE at various locations in Suffolk County, NY. Expert reports July 2007, August 2007 and October 2007, Case settled August, 2008.

Expert Witness - Deposition for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Sag Harbor, NY. August 2002

Expert Witness - for NYS Attorney General regarding NYSDEC cost recovery for a petroleum spill site at Riverhead, NY. Case settled July 2008.

Expert Witness for defendant responding to a claim from adjacent commercial property owner on the origin of chlorinated solvents on plaintiff's property located in Cedarhurst, NY. Expert opinion submitted to lead counsel on March 6, 2009, case settled April 2009.

Expert Report - for Attorney General on modeling performed to determine the spill release scenario at a NYSDEC petroleum spill site in East Moriches, NY. June 2000.

MODELING EXPERIENCE (PARTIAL LISTING)

Table with 3 columns: PROJECT, MODEL, APPLICATION. Rows include Riverhead Water District, NYSDEC - Region 1, AMOCO, Keyspan Energy, Saboneck Golf Club, Suffolk County Department of Public Works, SCDPW SUNY Waste Water Treatment Plant, and Water Authority of Great Neck North.

ENVIRONMENTAL BUSINESS CONSULTANTS

Chawinie Miller, Project Manager / Industrial Hygienist

Professional Experience

EBC: March 2013

Prior: 7.5 years

Education

Bachelor of Science, Environmental Health and Safety, Stony Brook University, NY

Areas of Expertise

- Phase I / Property Condition Assessments
- Occupational Health and Safety Sampling
- Indoor Air Quality (IAQ) Investigations
- Mold Investigations and Remediation
- Soil and Ground Water Investigations
- Noise Studies

Professional Certification

- OSHA 40-hr HAZWOPER
- NYS Asbestos Inspector
- NYC Asbestos Investigator
- OSHA 10-hr Construction Health and Safety
- Hazard Analysis and Critical Control Point (HACCP) Certified

PROFILE

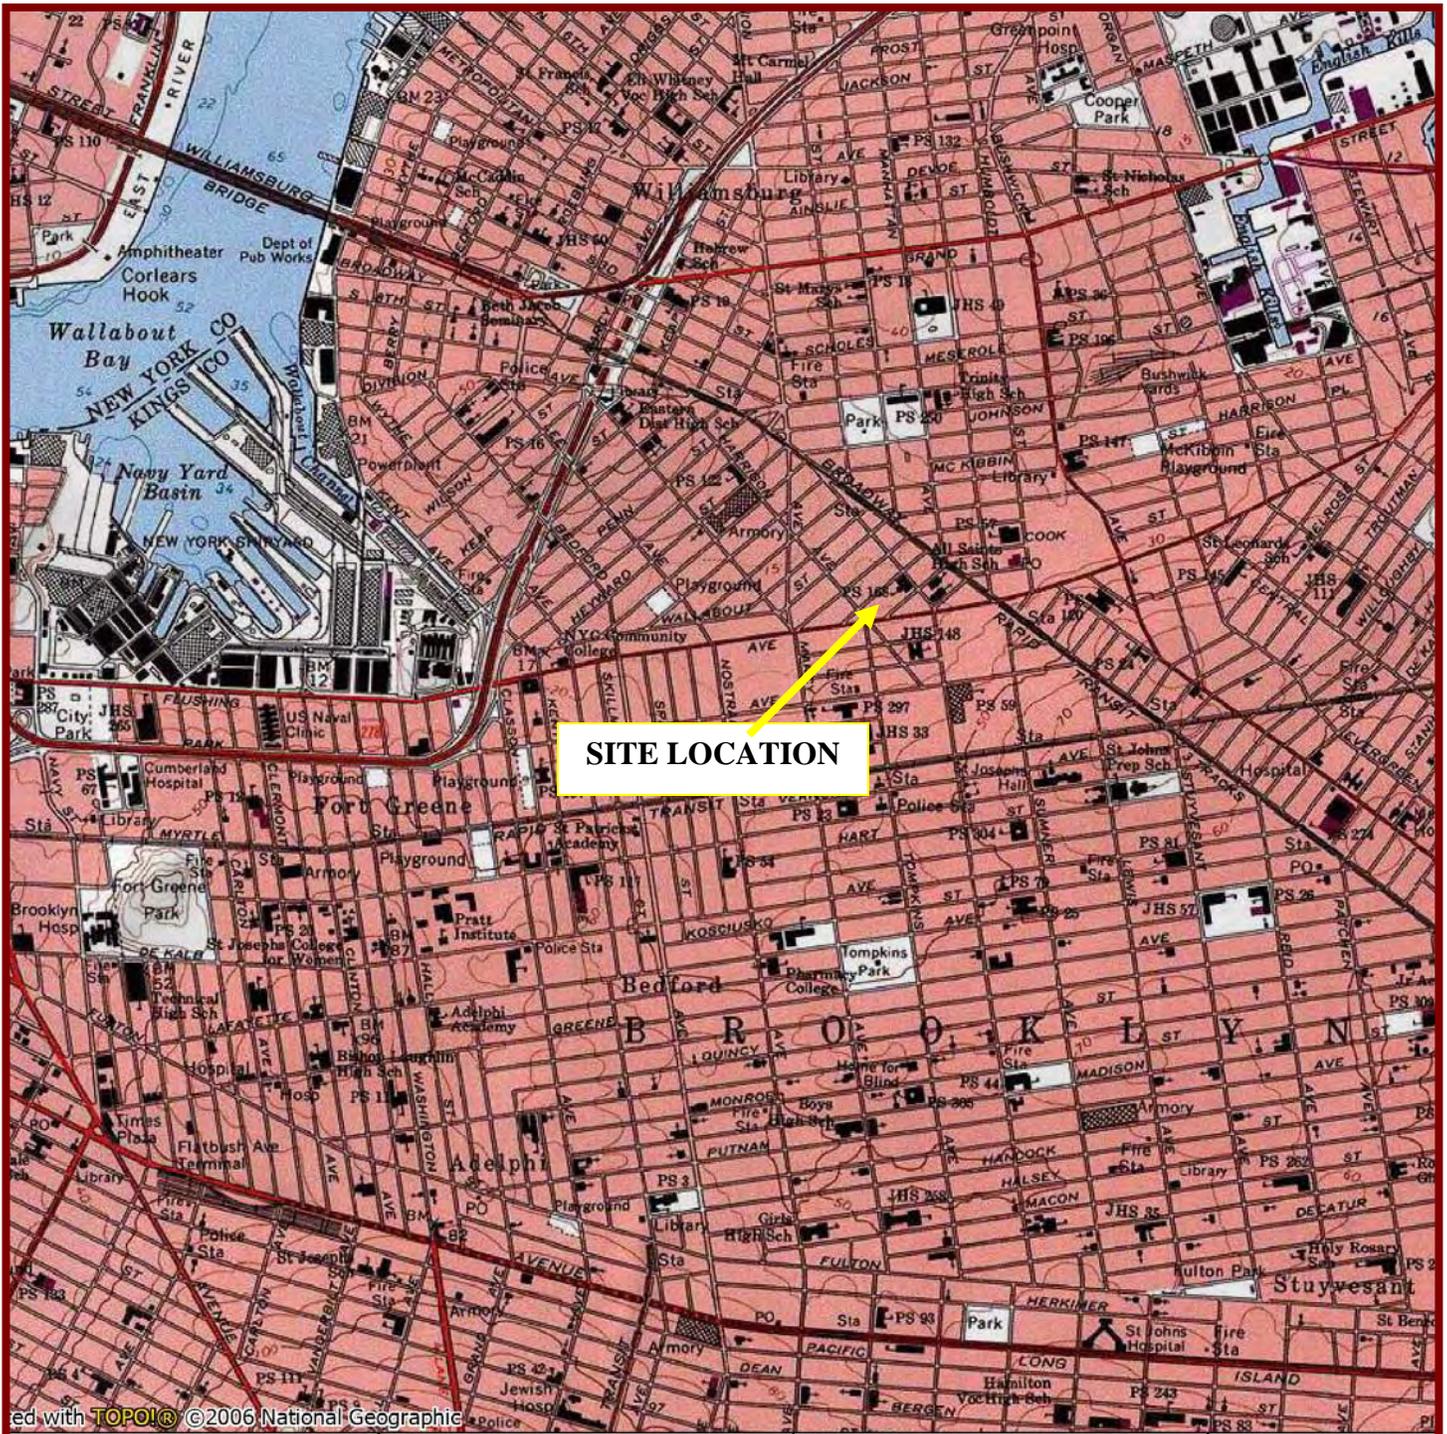

Ms. Miller has 7.5 years experience as an environmental consultant/contractor and has worked on and managed a wide range of environmental projects. Ms. Miller has conducted Phase Is and Property Condition Assessments for commercial, industrial, and residential properties in New York, New Jersey and Connecticut. In addition, Ms. Miller has conducted various IAQ, asbestos, mold and occupational health and safety sampling investigations for a variety of city, state, federal and private clients.

THIS INDENTURE, made the 12TH day of January (between hundred and eight eight
BETWEEN Victor Gluck 110 Lee Ave., Brooklyn, N.Y. and
Mendel Hirsch, 31 Quickway Road, Monroe, N.Y.
party of the first part, and

II WHIPPLE REALTY CORP. HAVING OFFICES AT
1070 EAST 58TH STREET, BROOKLYN, N.Y.

party of the second part.

WITNESSETH, that the party of the first part, in consideration of Ten Dollars and other valuable con- sideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

ALL that certain plot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the Borough of Brooklyn, County of Kings, City and State of New York, designated on the Tax Map of the City of New York, for the Borough of Brooklyn, as said Tax Map was on April 27, 1976, and January 17, 1978, as Block 2272, Lots 45, 46 and 47.

SAID PREMISES BEING KNOWN AS 5, 4 & 11 WHIPPLE ST. BKLYN N.Y.

TOGETHER with all right, title and interest, if any, of the party of the first part of, in and to any streets and roads abutting the above-described premises to the center lines thereof; TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises; TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.
AND the party of the first part, in compliance with Section 15 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before any part of the trust fund is

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1928 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

5 WHIPPLE
BROOKLYN, NY 11206

COORDINATES

Latitude (North): 40.7004000 - 40° 42' 1.44"

COAL ASH DOE.....	Steam-Electric Plant Operation Data

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard

EXECUTIVE SUMMARY

associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 07/08/2013 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/19/2013 has revealed that there are 35 NY LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 08/07/2013 has revealed that there are 13 NY UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

NY CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the NY CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1 NY CBS AST site within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, and dated 08/19/2013 has revealed that there are 3 NY VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/19/2013 has revealed that there are 23 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that

EXECUTIVE SUMMARY

there are 13 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

NY HSWDS: The List includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The latest version of the study is frozen in time. The sites on the study will not automatically be made superfund sites, rather each site will be further evaluated for listing in the registry. So overtime they will be added to the registry or not.

A review of the NY HSWDS list, as provided by EDR, and dated 01/01/2003 has revealed that there are 2 NY HSWDS sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 5 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 22 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 4 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

---	---	------------------	---------------------------------

Relative: Lower Actual: 13 ft.	SPILLS: Facility ID: 0104597 DER Facility ID: 215665 Facility Type: ER Site ID: 196822 DEC Region: 2 Spill Date: 7/30/2001 Spill Number/Closed Date: 0104597 / Not Reported Spill Cause: Unknown Spill Class: Known release that creates potential for fire or hazard. DEC Response. Willing Responsible Party. Corrective action taken. SWIS: 2401 Investigator: rjfeng Referred To: SULFATE INJECT FULL SCALE MONITORING, 2Q2012 Reported to Dept: 7/30/2001 CID: 270 Water Affected: Not reported Spill Source: Gasoline Station Spill Notifier: Responsible Party Cleanup Ceased: 6/29/2004 Cleanup Meets Std: False Last Inspection: Not reported Recommended Penalty: False UST Trust: False Remediation Phase: 4 Date Entered In Computer: 7/30/2001 Spill Record Last Update: 3/29/2013 Spiller Name: Not reported Spiller Company: AMOCO Spiller Address: Not reported Spiller City,St,Zip: ZZ Spiller Company: 001 Contact Name: Not reported Contact Phone: (718) 387-5165 DEC Memo: 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 12/4/03 Reassigned from Vought to Foley. See spill #8401982. See PIN file 4393.HISTORY:Leaks were detected and repaired at the threaded bushings of the piping run in 1984. MWs and an extraction well were installed in 1985. LNAPL was detected in 10 of 11 on-site wells ranging in thickness from trace to approx 1'. A product recovery system(scavenger pumps) was installed and activated. Approx 3000gal of LNAPL was removed. In 1990, the 12X550gal tanks were removed and new 4000gal double-walled tanks, islands and dispensers were installed. Subsequent to the rebuild, four new MWs were installed. Approx 0.06' LNAPL was observed in one well. Tyree had monitored these wells from 1990 to 1995. In July 1995, Tyree also installed three temporary wells in the sidewalk across Bartlett St. No BTEX or MTBE above GW standards was detected in these. In Oct 1997, Baltec installed MW-5 which contained VOCs above standards. The site transitioned to Delta in April 1999. In May 1999, an EFR event was conducted on MW-3. Approx 700gal of impacted GW was treated(approx 9lbs VOCs removed). The results of the EFR event indicated that the residual contamination was no longer significantly volatile and therefore indicative of an older release.

In July 2001, LNAPL was observed in tank mat well TW-1 during routine monitoring events at a thickness of 0.41' and was determined to be fresh. Spill #0114597 was reported. The LNAPL may have been related to a leaking impact valve at dispenser 5/6 which was discovered 6/11/01 and repaired 6/12/01. LNAPL was last detected in TW-1 in 1/02. An EFR program was initiated in 7/01. Between 7/01 and 2/02, nine EFR events were conducted on tank mat well TW-1. Approx 1gal of LNAPL, 4116gal water and a total mass of 255lbs of VOCs were recovered and treated. Between 3/6/02 and 4/24/02, six MWs were installed and VOCs in excess of soil cleanup objectives were detected in all samples. Between 9/22/03 and 10/27/03, spill containment was installed around the submersible pumps, deep spill containment boxes were installed under the dispensers, 50' of steel piping was replaced with double walled fiberglass, and leak detection was installed at each spill containment box and tied to the Veeder Root. 12/8/03 Received Line Closure and Dispenser Upgrade Report (Delta, 12/4/03). Depth to groundwater approx 6-7'bgs. VOCs were not detected above TAGM cleanup objectives in any of the soil samples collected. Soil samples were collected from beneath the three dispensers (2.5-3.5'bgs). Three post-ex soil samples were collected along the product piping (3-3.5'bgs). Four samples were collected during the sump upgrade (2.5-3'bgs). 3/19/04 Received 2Q, 3Q, and 4Q 2002 reports. Dissolved BTEX and MTBE at high concentrations. 0.01ft LNAPL detected in MW-3 10/8/02, 0.13ft in MW-3 on 7/17/02 and 4/15/02. 5/4/04 Overdue for tightness test since 5/1/02. Spartan Petroleum Corp. was previous owner. 5/25/04 Keyspan was installing 300ft of natural gas line and noticed a gasoline odor in the soil they excavated. Reported spill #0402082. See notes. 5/26/04 Stip mailed out and due back 6/28/04. Two Pfizer buildings, one located across Flushing Ave and one across Bartlett St. The one on Bartlett has a Charter School and playground area south of school (cross gradient of station). Delta was on-site to collect endpoints from Keyspan excavation. One of four (composite) endpoints returned with VOCs in excess of soil cleanup objectives. 5/28/04 1Q03, 2Q03, 3Q03, 4Q03 and 1Q04 monitoring reports submitted. 1Q04 BTEX from ND (MW-7, 12, A) to 35,740ppb (MW-F). MTBE from ND (MW-6, 7, 12) to 39,300ppb (MW-9). 6/29/04 Stip executed by T. Kunkel. 7/6/04 Passing tank test results submitted. Investigation Report due 8/28/04. 8/17/04 2Q04 monitoring report received. BTEX from ND (MW-6, 7, 12, A) to 62870ppb (MW-F). MTBE from ND (MW-6, 7, 12) to 18500ppb (MW-9). 8/31/04 Received Investigation Summary Report. Delineation complete. RAP due 10/27/04. 11/18/04 A. Lapine update- On November 11, 12, and 15th, Delta collected ground water samples for geochemical analysis in support of a potential Biostimulation Remedial Action Plan. The suite of analytes are extensive, so the laboratory analysis usually takes a few weeks. Awaiting a status from the lab and plan on a requesting a rushed turnaround. Will expedite the preparation of the report. 1/14/05 Received RAP for biological stimulation. MW-1, MW-5, MW-11 and MW-13 are proposed to be used to inject nitrate/sulfate solutions into the subsurface. A workplan describing the specific application of nitrate and sulfate solutions with regard to quantity, concentration and expected rate of injection, as well as a future monitoring program to determine a level of effectiveness will be submitted upon approval of the RAP. An exposure assessment was conducted identifying chemicals of concern (COC), identifying potential receptors and exposure pathways, determining complete exposure pathways, estimating COC concentrations at points of

MAP FINDINGS

AMOCO (Continued)

S105141059

exposure(POE) for each complete pathway, estimating potential baseline exposure at POEs and estimating site-specific target levels(SSTLs). The assessment concluded concentrations of BTEX and MTBE are protective of potential receptors. Delta conducted geochemical sampling from 11/11/04 to 11/23/04. Samples from MW-6 and MW-7 were from upgradient to assess conditions outside of the impacted zone. Samples from MW-4, MW-5 and MW-11 were within the impact zone. The evidence suggests: Dissolved oxygen levels are depressed in the source zone and recover in downgradient wells. ORP readings support depletion of electron acceptors in the source zone, as compared to upgradient background. Nitrate concentrations are depleted in the source zone, as compared to upgradient and downgradient(nitrate-reducing activity). Concentrations of dissolved manganese increases in the source zone(manganese-reducing activity). Concentrations of ferrous iron increases in the source zone(iron-reducing activity). Concentrations of sulfate are depleted in the source zone(sulfate-reducing activity). Highly elevated concentrations of dissolved methane in the impacted zone indicate methanogenic biological activity.Introduction of exogenous nitrate and sulfate solutions (by injection into existing wells), will provide for additional electron acceptors to increase the rate of biodegradation.3/22/05 Approved RAP which is to be implemented by 7/21/05. Delta to submit workplan outlining specific application of nitrate and sulfate solutions with regard to quantity, conc, and rate of injection in addition to OMMP.4/27/05 Portfolio meeting- Injection workplan to be submitted 6/05, O&M 7/05, RAP implementation by 9/05.7/15/05 4Q04- DTW 5 to 7'bgs, northeast. No LNAPL present. BTEX from ND(MW-6,7,14,15,16) to 51170ppb(MW-13). MTBE from ND(MW-6,7,13,14,16) to 3170ppb(MW-9).11/8/05: Reviewed quarterly report dated October 27, 2005. Twelve of 16 wells were sampled on January 27, 2005. No free product. Max BTEX is 8,950 ppb (MW12), max MTBE 702ppb (MW12). Contamination in all on-site wells. Increased BTEX concentration in MWs-2,12,& 17.11/25/05 2Q05 - Fifteen wells sampled on 4/29/05. Max BTEX 66,750 (MW13), max MTBE 1,210 (MW10). Fluctuating contaminant trends.3Q05 - DTW 6.10-7.66'bgs. BTEX from ND(MW-6,7,14,15) to 58980ppb(MW-13). MTBE from ND(MW-6,7,14) to 1000ppb(MW-10).3/3/06 All 16 wells sampled 10/20/05. MW-8 was paved over. DTW 5.36-7.79'bgs. No LNAPL present. BTEX from ND(MW-6,7,14,15) to 23770ppb(MW-13). MTBE from ND(MW-6,7,14) to 816ppb(MW-9). Off-site wells are non-detect. Evaluating biostimulation as remedial strategy.3/16/06 Meeting held with BP and Delta. K. Endriss of BP was questioning biostimulation as a strategy. There will be an internal review prior to submitting RAP and OM&M Plan.6/8/2006 - Feng - project reassigned to RJFeng. (RJF)9/22/2006 - Feng - Quarterly Monitoring Report, 1Q2006, 8/17/2006, by Delta. Groundwater sampling and gauging on 1/30/2006. 14 of the 16 monitoring wells were sampled. MW-6 was not sampled due to an obstruction. MW-16 was not sampled due to an insufficient volume of water in the well. Groundwater flows to east at the depth of 5.37' to 7.67' bg. MW-1, 128.6 ppb BTEX, 7.5 ppb MTBE. MW-2, 8,513 ppb BTEX (381 ppb B, 2,670 ppb T, 382 ppb E, 5,080 ppb X), 63.6 ppb MTBE. MW-3, 4,239 ppb BTEX (3,790 ppb B, 102 ppb T, 48 ppb E, 299 ppb X), 591 ppb MTBE. MW-4, 232 ppb BTEX, 13.6 ppb MTBE. MW-5, 2,801 ppb BTEX, 57.2 ppb MTBE. MW-7, ND. MW-9, 974.8 ppb BTEX, 2,270 ppb MTBE. MW-10, 263.6 ppb BTEX, 163 ppb MTBE. MW-11, 8,220 ppb BTEX (1,920 ppb B, 1,300 ppb T, 1,330 ppb E, 3,670 ppb X), 788 ppb MTBE. MW-12, 4,933 ppb BTEX (1,780 ppb B, 480 ppb T, 573 ppb E, 2,100 ppb X), 39.2 ppb MTBE. MW-13, 15,550 ppb BTEX (4,200 ppb B,

5,040 ppb T, 1,190 ppb E, 5,120 ppb X), 67.8 ppb MTBE. MW-14, ND. MW-15, ND. MW-17, 974.2 ppb BTEX, 43.1 ppb MTBE. (RJF)9/28/2006 - Feng - Portfolio meeting with BP and Delta. RAP plan changed. Delta began engineering design/construction of the automatic bio-stimulation system. Sulfate injection plan and O&M plan will be submitted. Sulfate concentration will be monitored downgradient which should not exceed the groundwater standard. (RJF)12/6/2006 - Feng - Quarterly Monitoring Report, 2Q2006, 11/27/2006, by Delta. Groundwater sampled and gauged 5/5/2006. 14 of 16 monitoring wells were sampled. MW-6 was not sampled due to an obstruction. MW-16 was not sampled due to insufficient volume of water in the well. DTW 4.9' to 7.24'. Flows northeast. No LNAPL. BTEX range ND to 45,980 ppb (MW-13). MTBE range ND to 2,660 ppb (MW-9). (RJF)6/12/2007 - Feng - Quarterly Monitoring Report, 3Q2006, 1/29/2007. Groundwater sampled 7/24/2006. 14/16 monitoring wells were sampled. DTW 5.52' to 7.21' bg. No LNAPL. Flows to northeast. MW-1, 88.3 ppb BTEX, 7.9 ppb MTBE. MW-2, 6,765 ppb BTEX, 30 ppb MTBE. MW-3, 4,027 ppb BTEX, 198 ppb MTBE. MW-4, 104 ppb BTEX, 8.5 ppb BTEX. MW-5, 980 ppb BTEX, 29.3 ppb MTBE. MW-6, not accessible. MW-7, ND. MW-9, 589 ppb BTEX, 434 ppb MTBE. MW-10, 159 ppb BTEX, 124 ppb MTBE. MW-11, 3,506 ppb BTEX, 163 ppb MTBE. MW-12, 4,550 ppb BTEX, 50.4 ppb MTBE. MW-13, 23,940 ppb BTEX, 34.2 ppb MTBE. MW-14 and MW-15, ND. MW-16, not enough water. MW-17, 807 ppb BTEX, 44.2 ppb MTBE. (RJF)7/24/2007 - Feng - 4Q2006, 4/30/2007. Groundwater sampled 10/30/2006. 12/15 monitoring wells were sampled. DTW 5.79' to 7.21' bg. Flows to northeast. LNAPL in MW-13 (0.05'). MW-1, 132 ppb BTEX, 4.8 ppb MTBE. MW-2, 28,400 ppb BTEX, 27 ppb MTBE. MW-3, 3,627 ppb BTEX, 253 ppb MTBE. MW-4, 203 ppb BTEX, 5.1 ppb MTBE. MW-5, 707 ppb BTEX, 7.7 ppb MTBE. MW-6, not accessible. MW-7, 209 ppb BTEX, 14.3 ppb MTBE. MW-9, 358 ppb BTEX, 139 ppb MTBE. MW-11, 264 ppb BTEX, 112 ppb MTBE. MW-12, 5,312 ppb BTEX, 496 ppb MTBE. MW-13, 762 ppb BTEX, 53.8 ppb MTBE. MW-14, MW-15, ND. MW-16 and MW-17, not accessible. 1Q2007, 5/7/2007. Groundwater sampled 1/5/2007. 15/16 monitoring wells were sampled. DTW 5.71' to 8.98' bg. Flows to northeast. No LNAPL. MW-1, 161 ppb BTEX, 4.4 ppb MTBE. MW-2, 29,260 ppb BTEX, 19.8 ppb MTBE. MW-3, 149 ppb BTEX, 639 ppb MTBE. MW-4, 277.5 ppb BTEX, 6.1 ppb MTBE. MW-5, 2,013 ppb BTEX, 20.1 ppb MTBE. MW-6, not accessible. MW-7, Nd. MW-9, 837 ppb BTEX, 285 ppb MTBE. MW-10, 2.51 ppb BTEX, 108 ppb MTBE. MW-11, 4,532 ppb BTEX, 330 ppb MTBE. MW-12, 24,563 ppb BTEX, 1,200 ppb MTBE. MW-13, 2,935 ppb BTEX, 23.8 ppb MTBE. MW-14, MW-15 and MW-16, ND. MW-17, 1,428 ppb BTEX, 24 ppb MTBE. (RJF)12/12/2007 - Feng - 2Q2007, 8/30/2007. Active Service Station. The monitoring well network was gauged and sampled on 4/4/2007. 15/16 monitoring wells were gauged. DTW 5.31' to 6.81' bg. Flows to northeast. No LNAPL. 14/16 monitoring wells were sampled. BTEX range ND to 12,400 ppb (MW-11). MTBE range ND to 671 ppb (MW-9). (RJF)1/8/2008 - Feng - 3Q2007, 11/5/2007. Active Service Station. The monitoring well network was gauged and sampled on 7/13/2007. 12/16 monitoring wells were gauged. DTW 5.64' to 7.91' bg. Flows to northeast. No LNAPL. 12 monitoring wells were sampled. BTEX range ND to 40,760 ppb (MW-13). MTBE range ND to 2,040 ppb (MW-3). (RJF)2/13/2008 - Feng - 4Q2007, 11/19/2007. Active service station. the monitoring well network was gauged and sampled on 10/3/2007. 14/16 monitoring wells were gauged. DTW 6.51' to 7.87' bg. Flows to northeast. No LNAPL. 13 monitoring wells were sampled. BTEX range ND to 8,190 ppb (MW-11). MTBE range ND to 249 ppb (MW-3). (RJF)3/20/2008 - Feng - Email to K. Endriss (BP) for the status of biostimulation/sulfate solution injection. (RJF)6/16/2008 - Feng -

MAP FINDINGS

AMOCO (Continued)

S105141059

1Q2008, 2/15/2008. Active service station. The monitoring well network was gauged and sampled on January 21, 2008. 12 monitoring wells. DTW 5.72' to 7.39' bg. Flows to northeast. No LNAPL. BTEX range ND to 29,200 ppb (MW-13). MTBE range ND to 470 ppb (MW-3). (RJF)8/26/2008 - Reviewed the Work Plan Addendum Bio-Stimulation Remediation Pilot Study, dated July 29, 2008, by Delta. The work proposed in this work plan was originally proposed in the approved RAP dated 1/13/2005. A pilot study will be performed to address DEC's concern regarding the application of elevated sulfate concentrations. 784 lbs of magnesium sulfate will be mixed with 1,000 gallons of tap water (75,000 mg/L) will be added into MW-1 by gravity. DTW of all monitoring wells will be gauged immediately after the application. Gauging and sampling of the wells will be performed the day after the application and then on weekly basis for 12 weeks. (RJF)9/12/2008 - Comments on the Work Plan Addendum Bio-Stimulation Remediation Pilot Study were provided to Delta. 11/10/2008 - 2Q2008, 8/7/2008, by Delta. Active Service station. the monitoring well network was gauged and sampled on 4/25/2008. 14 wells were gauged. No LNAPL. DTW 6.01' to 7.60' bg. Flows to northeast. MW-6 and MW-7 were not found and not gauged. 13 wells were sampled. MW-16 didn't have sufficient volume for sampling. BTEX range ND to 29,100 ug/L (MW-13). MTBE range ND to 1,000 ug/L (MW-9). 10/28/2008 - 3Q2008, 9/29/2008, by EnviroTrac. Active BP service station. The monitoring well network was gauged and sampled on 7/14/2008. 14 wells were gauged. No LNAPL. DTW 5.90' to 7.72' bg. Flows to northeast. 13 wells were sampled. MW-6 and MW-7 couldn't be located. MW-16 has insufficient sample volume. Max benzene 4,500 ug/L (MW-13). Max BTEX 26,200 ug/L (MW-13). Max MTBE 650 ug/L (MW-9). (RJF)3/4/2009 - 4Q2008, 1/5/2009, by EnviroTrac. Active BP Service Station. The monitoring well network was gauged and sampled on 10/2/008. 14 wells were gauged. NO LNAPL. DTW 5.75' to 8.25' bg. Flows to northeast. 13 wells were sampled. 3 wells were not sampled, MW-6 and MW-7 were paved over and MW-16 was dry. Max benzene 2,500 ug/L (MW-13). Max BTEX 13,970 ug/L (MW-13). Max MTBE 410 ug/L (MW-9). (RJF)5/21/2009 - Reviewed Drilling Work Plan, dated 3/31/2009, by Delta. Delta is installing 2 monitoring wells at the site. Proposed MW-18 will be in downgradient instead replacing the two wells across street. Work plan is approved. SHARA due within 90 days, August 21, 2009. (RJF)1/8/2010 - Reviewed Subsurface Hydrocarbon Assessment Report Addendum, dated 10/16/2009, by Delta. Between June 18 and June 19, 2009, Envirotrac, on behalf of Atlantic Richfield, advanced two soil borings (MW-18 and MW-19) to 12 feet and 15 feet respectively, using Geoprobe 6620 hollow stem auger and direct push, macro-core sampling unit. 2 soil samples were collected. MW-19 (6-6.5'), NO PID, VOCs ND. MW-19 (14.5-15'), NO PID, VOCs ND. On July 13, 2009, all the wells were gauged and sampled. DTW 5.89' (MW-13) to 7.46' (MW-16). BTEX range ND to 3,450 ug/L (MW-13). MTBE range ND to 470 ug/L (MW-9). MW-18, VOCs ND. MW-19, 0.61 ug/L benzene, 0.61 ug/L total VOCs. The sulfate injection pilot is scheduled for October 21, 22, 2009, and will has a 12-week monitoring plan. (RJF)6/9/2010 - 4Q2009, 1/17/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 10/6/2009. 16 wells were gauged. NO LNAPL. DTW 6.22 - 7.58' bg. Flows to northeast. 15 wells were sampled. MW-16 with insufficient water, not sampled. Max benzene 2,600 ug/L (MW-11). Max BTEX 4,280 ug/L (MW-11). Max MTBE 280 ug/L (MW-3). 1Q2010, 4/9/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 1/15/2010. 16 monitoring wells were gauged. NO LNAPL. DTW 6.19 - 7.92' bg. Flows to northeast. 15 wells

were sampled. MW-16 with insufficient water, not sampled. Max benzene 3,900 ug/L (MW-3). Max BTEX 5,160 ug/L (MW-11). Max MTBE 810 ug/L (MW-3). 2Q2010, 5/19/2010, by EnviroTrac. The monitoring well network was gauged and sampled on 4/9/2010. 16 wells were gauged. NO LNAPL. DTW 5.59 - 7.33' bg. Flows to northeast. 15 wells were sampled. MW-16 not enough water, not sampled. Max benzene 3,900 ug/L (MW-13). Max BTEX 21,780 ug/L (MW-13). Max MTBE 530 ug/L (MW-3). 6/21/2010 - Enhanced Bioremediation Pilot Summary and Full Scale Application Work Plan, dated 4/1/2010, by Delta. On 10/20/2009, pre-application groundwater monitoring including gauging for DTW, well depth, sampling for BTEX, MTBE, sulfate and sulfide. On 10/21, 22/2009, a 1,000 gallon of 28,000 mg/L sulfate solution was added to MW-1. Post-application groundwater monitoring for sulfate and sulfide was conducted, 10/23, 11/4, 11/12, 11/20, 11/24, 12/4, 12/11, 12/16, 12/22, 12/29/2009, 1/15/2010 and 2/19/2010. Some orders of magnitude of sulfate was detected in MW-2, MW-4, MW-12 and MW-13. The concentration of sulfate up to 27,000 mg/L was dissipated in MW-1 within 120 days. Delta proposes to apply full scale, adding 500 gallon MgSO₄ at 28,000 mg/L into MW-1, MW-3, MW-5 and MW-13 for 12 events in 36 months, namely quarterly application. Gauging and monthly sampling will be conducted. Reviewed the quarterly report. comments to Delta. MW-2, MW-4, MW-12 and MW-13 seem not show effectiveness on remediating the dissolved as the BTEX/MTBE concentration is still remaining the similar level after the pilot application. And question if sulfate addition is still an appropriate remedy. 6/28/2010 - approve the full scale application work plan, dated 4/1/2010. The work plan implementation and results shall be included in the quarterly reports, and a report summarize the remedy shall be submitted after the 36-months application activities. 8/6/10 Spill case temporarily transferred from June Feng to J.A. Maisonave. - JAM4/11/2011 - Spill transferred back to JFeng. 6/27/2011 - received 2Q2011. eDoc. JF9/15/2011 - 2Q2011, 6/27/2011, by Antea Group. Groundwater samples were collected on April 5, 2011. 15 wells were sampled. Max BTEX 12,490 ug/L (MW-13). Moderate BTEX with high benzene in multiple wells. Benzene 3,700 ug/L (MW-3). Max MTBE 550 ug/L (MW-3). 11/7/2011 - 3Q2011, 10/11/2011, by Antea Group. Groundwater samples were collected on July 22, 2011. 14 wells were sampled. High/moderate BTEX and MTBE in multiple wells. MW-3, 1,644 ug/L BTEX, 68 ug/L MTBE. MW-4, 392 ug/L BTEX, 5 ug/L MTBE. MW-5, 875 ug/L BTEX, 77 ug/L MTBE. MW-9, 990 ug/L BTEX, 390 ug/L MTBE. MW-10, 1,040 ug/L BTEX, 90 ug/L MTBE. MW-11, 1,652 ug/L BTEX, 20 ug/L MTBE. MW-12, 1,240 ug/L BTEX, 7.7 ug/L MTBE. MW-13, 14,100 ug/L BTEX, <10 ug/L MTBE. 5/2/2012 - 1Q2012, 3/28/2012, by Antea Group. Groundwater samples were collected on 1/3/2012. High BTEX and MTBE in multiple wells. MW-2, 1,708 ug/L BTEX, <5.0 ug/L MTBE. MW-3, 2,074 ug/L BTEX, 160 ug/L MTBE. MW-4, 354 ug/L BTEX, 3.3 ug/L MTBE. MW-5, 1,236 ug/L BTEX, 25 ug/L MTBE. MW-9, 1,852 ug/L BTEX, 210 ug/L MTBE. MW-11, 142 ug/L BTEX, <2.5 ug/L MTBE. MW-12, 1,479 ug/L BTEX, 6.1 ug/L MTBE. MW-13, 12,500 ug/L BTEX, <5.0 ug/L MTBE. MW-17, 488 ug/L BTEX, 20 ug/L MTBE. 7/20/2012 - 2Q2012, 7/5/2012, by Antea Group. Groundwater samples were collected on April 16, 2012. The next sampling is scheduled for July 2012. MW-2, 2,085 BTEX, 5.4 MTBE. MW-3, 1,782 BTEX, 99 MTBE. MW-4, 264 BTEX, 19 MTBE. MW-5, 2,210 BTEX, 8.8 MTBE. MW-9, 2,082 BTEX, 310 MTBE. MW-10, 1,550 BTEX, 43 MTBE. MW-11, 407 BTEX, 6.2 MTBE. MW-12, 2,250 BTEX, 8.6 MTBE. MW-13, 4,430 BTEX, 6.1 MTBE. MW-17, 381 BTEX, 2.8 MTBE. Table with sulfate sampling is also attached. 11/30/2012 - 3Q2012, 9/27/2012, by Antea Group. The

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "K FOLEY"5/25/04 Amoco station adjacent to excavation. Keyspan will manifest and remove soil they pulled but will not go to clean endpoints. (notes from Sangesland)5/25/04 Bart Polizotti(Keyspan) confirmed address of Amoco station as 655 Flushing Ave at Tompkins Ave, not Thompson. See Amoco spill #0104597. (KMF)5/26/04 Site visit with J. Sun. Keyspan contractor, Hallen, trenching along Flushing Avenue and around Harrison St. No odors detected from trench while on-site. No water in excavation. Contractor from Hallen stated contamination was spotty. Will be hiring Miller Environmental to remove and dispose of contaminated soil. While on site, attempted to locate the monitoring wells put in by Delta to address spill #0104597. MW-5 and MW-7 were possibly under plates. Contractor stated that they did not remove any wells. Two Pfizer buildings, one located across Flushing Ave and one across Bartlett St. The one on Bartlett has a Charter School and playground area south of school. Remediation work to be done under spill #0104597.

Remarks: gas construction crew installing 300 feet of gas line noticed odor of gasoline in the soil they excavated.

87ppb8/4/97 Spoke with Keith Butler, Baltec (914-273-2626). He will be looking to install 2 additional wells. May want to use peroxide injection in future. Told him we need to get some past history on the site.8/9/97 Spoke with K. Butler. Found 4 additional MWs at site. Total of 8 wells. Therefore he feels it is delineated well. Instead of peroxide, he will likely use ORC socks.8/20/97 While on site to investigate optimal locations for additional MWs, Baltec located 4 existing tank mat wells. The wells were designated TW-1, TW-2, TW-3 and TW-4.8/25/97 At this sampling event, it was determined that all tank mat wells required redevelopment. They contain approx 2' silt, which is likely clogging the screened interval creating lower hydraulic conductivity across screen. This may explain BTEX depression around TW-1 and TW-2. In order to further delineate the soil/GW quality across site and to obtain more accurate understanding of GW flow pathways, Baltec intends to install one additional onsite MW in the NE corner of the site. Baltec will also redevelop TW-1 through TW-4 during the 4th quarter.10/20/97 Voicemail from K. Butler. Old MWs were damaged. Would like to install additional wells.10/21/97 Installed one additional well on NE corner(Harrison St & Flushing Ave.). Noticed three more wells offsite (2 on sidewalk across street on Bartlett St and 1 across street on Flushing Ave.) Wells are fine, tied in and surveyed. GW flow direction is NE.02/27/2003-AUSTIN As per directive to close out spills with no recent history,close out. 3/14/03 REASSIGNED FROM TOMASELLO TO VOUGHT. 12/3/03 Reassigned from Vought to Foley. See spill #0104597.

DEC Memo: 3/29/05 - Austin - Previously unassigned spill report; reassigned to Austin for transfer to Central Office 09/16/05- Spoke to Wahid Khan. Will send in the report once the NYC dept of housing has reviewed the report. 04/06- Haven't heard back from Khan on the closure report. refer back to Region 2 - S. Scharf 10/11/06 - Austin - Reassigned from Central Office staff to Ketani, for follow up and closure - end 10/12/06 - Raphael Ketani. The site consists of two lots on the same block. 37 Bartlett Street is block and lot 2269 and 49. 39 Bartlett Street is block and lot 2269 and 48. I tried calling Walter Roberts at the NYC HPD (212) 863-8482, but got the answering machine for a woman. I left a message anyway. I tried calling Wahid Khan (973) 338-6680, but found out he didn't work at Earth Tech anymore. I was transferred to Ahmit Haryani (ext 218) who said that the project manager at the time was Mike Thiagaram (973) 337-4242. He said that he thought the contract with HPD was completed, as well as the cleanup work. He said this because HPD paid Earth Tech and this doesn't happen unless the closure report is written and submitted and accepted. Mr. Haryani said that Mr. Thiagaram will call me back. 12/22/06 - Raphael Ketani. I tried to contact Mr. Thiagaram, but could only leave a voice mail. I contacted Mr. Haryani and he apologized for having not sent the documentation. He said that Earth Tech had been paid, and the HPD had reviewed the cleanup report and had approved it. He said he will look into the matter and he will work to get me the documentation to close the case. 4/11/07 - Raphael Ketani. I contacted Mr. Haryani and asked him whether he was able to get the closure report. He said "No" and directed me to call Shampa Chanda of HPD at (212) 863-6364. I spoke to Ms. Chanda. She said the person I should talk to is John Gerrity (212) 863-8052. She said he would know where the report is or its disposition. Ms. Chanda said he will get back to me. 7/26/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message. 10/18/07 - Raphael Ketani. I contacted Mr. Gerrity regarding the tank failure. He said that he had the data concerning the failure and its cleanup in a much larger report of about 265 pages that concerned the cleanup of the entire 4B property on which the building was situated. He said that the property was adjacent to 2 superfund sites, one of which is the former Pfizer plant. He said that an EIS was written for the rezoning. The rezoning is taking place this December. He said he will send me the full report. Mr. Gerrity added that there is no need for a PBS registration as there are only two 275 gal. tanks. 12/5/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message. 12/12/07 - Raphael Ketani. I tried to contact Mr. Gerrity,

DEPT. OF HOUSING (Continued)

S109059193

but could only leave a message.12/19/07 - Raphael Ketani. I tried to contact Mr. Gerrity, but found out that he had moved. His new number is (212) 863-6539. I left a message for him to call me.12/28/07 - Raphael Ketani. Mr. Gerrity called to say that he is still working on getting me a copy of the report for the tanks and the site. He said that there still are elevated levels of contaminants in the soil. He added that the contaminated soil will be removed when the site is developed for housing. 2/13/08 - Raphael Ketani. I spoke to Mr. Gerrity of HPD (212) 863-6539. I asked him for the report. He said he will e-mail the SIR to me right now. I asked him when the residual contamination will be cleaned up. He said that a Letter of Designation was sent to the developer. The developer now has to prepare an application for low income housing. Then the application has to be approved and other paperwork has to follow. Mr. Gerrity said that the whole process may take two years. I told him that DEC Spills can't wait two years for the site to be cleaned up. Mr. Gerrity said that he can't order a dig out of the contamination as that is a capital project. An environmental review has to take place and the go ahead has to be given for a capital project. Then the money gets funded. Right now, HPD doesn't have that much money set aside for this project. He said that they may be able to do soil treatment. I told him that soil treatment may work. I printed out the Draft Phase II SIR, but not all of the laboratory analytical pages (Appendix E) as there were too many to print out on the group printer. I did print all of the pages before and after Appendix E. 2/14/08 - Raphael Ketani. I finished my review of the 7/14/05 Draft Phase II - Site Investigation Report (SIR). The only comments I would make are that the soil analytical results for 10 of the test pits at the site had unusually high concentrations of SVOCs. These were the same SVOCs in almost all of the cases - the benzo series analytes and their combustion products, plus fluorene, phenanthrene, and pyrene. Naphthalene was either non-detect or very low in concentration, suggesting that the contaminants are not oil derived, but either ash or cinders. The site has a history of development and commercial activity from at least the late 1800s, according to the SIR. I tried to contact Mr. Gerrity (212) 863-6539 regarding which tank was mentioned in the report that had the tank failure, but I could only leave a message. I also intend to discuss the source of the high SVOCs in the test pit soils as there are no borings log descriptions.3/13/08 - Raphael Ketani. After checking with the NYC Property Tax database, I have concluded that this site (37 and 39 Bartlett Street) is not part of Site 4B and that I have the wrong report. The block is the same (2269), but it is the eastern half of the block. What I probably need is the report for site 4A! This is the western half of block 2269. I tried to contact Mr. Gerrity, but could only leave a message. I checked the PBS database and didn't find a record for either address.3/31/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message.4/11/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message with his secretary. She said she will let him know I called regarding site 4A.4/30/08 - Raphael Ketani. I tried to contact Mr. Gerrity, but could only leave a message. Mr. Gerrity called me back. He said that he apologized for not sending the Site 4A report. He said that he has it and he will have a copy hand delivered to DEC this week.6/17/08 - Raphael Ketani. Today I received the Site 4A Draft Phase II - Site Investigation Report produced by Earth Tech and dated July 14, 2005. This is the correct report for this site, not

the Site 4B report.6/26/08 - Raphael Ketani. I reviewed the Site 4A Draft Phase II. The soil analyticals for Test Pits TP-10 to TP-18 (lots 48 and 49) were mostly non-detect or below TAGM RSCO limits. Groundwater contamination was not elevated for these lots, nor were the soil analyticals for the tank graves (USTs 3 and 6) significant. Based upon the soil and groundwater analyticals in the Site 4A Draft Phase II, I am closing the spill case.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Hazardous Waste Summary:

Waste code: B007
Waste name: B007

Facility Has Received Notices of Violations:

Regulation violated: SR - 6nycrr372.2(a)(8)(i)(a)(2)
Area of violation: Generators - General
Date violation determined: 04/06/1998
Date achieved compliance: 05/07/1998
Violation lead agency: EPA
Enforcement action: WRITTEN INFORMAL

 DEC Memo: Sangesland called "Earth Tech Environmental" back to ask about this "spill" Contact said a 20 gal drum of unknown oil was found on the property during soil borings (part of a phase 2 on the site). Sangesland informed Earth Tech that the property owner was responsible for removing the drum from the site, NOT the DEC. Sangesland told Earth Tech to remove the drum, over excavate any contaminated soil, take 1 end point sample, forward a report to DEC with writeup, test results and waste manifest. 04/13/06- Case was transferred from Jake Krimgold to Koon Tang. 08/27/2009 - Copy of Phase 2 report was submitted by Earth Tech. In 2005, during excavation of Test Pit #29 on the site, a drum was discovered at approx 7 ft depth. Drum contained unknown black oil which was leaking. Spill was called in to DEC. Visually contaminated soils were excavated from a depth of 10 ft below grade (approx 35 tons) of soil was removed. Soil sample #TP29-10 was tested and came back No VOCs, or SVOCs therefore

Actual:
13 ft.

Site Description:

Location: Pfizer Sites B and D (collectively Site No. V00350) are located at the addresses 59-71 and 73-87 Gerry St. (Pfizer Site B), and 191 Harrison Ave and 60-66 Gerry St. (Pfizer Site D) in Brooklyn New York. Pfizer Site B is comprised of Block 2266, Lot 46 and part of Lot 1, and Pfizer Site D is comprised of Block 2269 Lot 1. It should be noted that references to Site B and Site D below are names designated by the Volunteer (Pfizer Inc.) for their properties and do not refer to Department designated Sites or operable units. Site Features: The VCP site comprised of Pfizer Site B and Site D is 1.47 acres in size. Pfizer Site B, located on the north side of Gerry Street, is bordered by Harrison Avenue to the west; multi-family residences, a former auto body garage and vacant land to the north; vacant land to the east; and Gerry Street and Pfizer Site D to the south. Pfizer Site B is currently vacant. Pfizer Site D, located on the south side of Gerry Street, is bordered by Harrison Avenue to the west; vacant lots to the east; Gerry Street and Pfizer Site B to the north; and a vacant, condemned apartment building and Bartlett Street to the South. Pfizer Site D consists of five interconnected buildings. These buildings surround three sides of a condemned apartment building (not Pfizer owned) that abuts Site D to the south and fronts on Bartlett Street. Current Zoning/uses: The Site is located in a commercial district overlay within a residential zoning district. Historical Use: Pfizer leased the western portion of Site B from the previous owner from 1954 to 2004; it has been vacant since the 1950s and occasionally used as a parking lot. The western portion of Pfizer Site B was sold by then-owner Ruth Apfrelbaum to Congregation YGS in 2004. The eastern portion of the property was purchased by Pfizer in 1964 and used as a warehouse for the storage of raw materials/dry goods, spare equipment parts, and packaging materials. Prior to Pfizers ownership, it was used as a garage and truck rental facility. Site D was formerly leased from Pfizer by Arlington Press, a company that specializes in labels and package inserts for the pharmaceutical industry. Soil removal activities were performed on the eastern portion of Pfizer Site B in 2002, and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of impacted soil and 18,449 gallons of groundwater (including perched groundwater). Sampling performed since the removal activities indicate that VOCs are no longer present in soil; and that petroleum-related VOCs in groundwater have been substantially reduced. Operable Units: An operable unit represents a portion of a remedial program for a site

MAP FINDINGS

PFIZER SITES B AND D (Continued)

S106906497

that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Because of the separate ownership and separate remediation and development schedules, the Site has been divided into two Operable Units. The eastern portion of Site B as well as Site D, owned by Pfizer, is Operable Unit 1 (OU-1). The western portion of Site B, owned by Congregation YGS, is Operable Unit 2 (OU-2). Site Geology and Hydrogeology: The Site is underlain by a layer of fill material approximately 8 to 10 feet thick. Beneath the fill layer is a green clay/silt stratum of approximately 2 to 3 feet thick, followed by a brown fine to medium sand stratum with small amounts of clay and silt of approximately 15 feet. Beneath the sand is a silt/clay layer which has been identified as a confining layer. Groundwater is approximately 6 to 10 feet below surface grade. On Site B, groundwater flow direction is generally northeast in the eastern portion of the Site and west/northwest in the western portion of the site. It has not yet been confirmed if groundwater flow direction is similar for Site D.

Env Problem: Nature and Extent of Contamination: OU-1 Eastern portion of Site B and Site D (Pfizer-owned properties): Soil: On the OU-1 portion of Site B, investigations have identified volatile organic compounds (VOCs) in soil; both petroleum-related BTEX compounds (benzene, toluene, ethylbenzene and xylenes) and chlorinated solvents (cVOCs). The source area was determined to be the eastern portion of Site B to a depth of approximately 8 to 10 feet below grade. Soil removal activities were performed in 2002, and included the excavation of 9 Underground Storage Tanks (USTs), 2 tank-like structures, and removal of 4,735 tons of impacted soil and 18,449 gallons of groundwater (including perched groundwater). Following the removal activities, sampling indicated that VOCs in soil no longer exceed NYSDEC Soil Cleanup Objectives (SCOs). Semi-volatile organic compounds (SVOCs) and metals have also been identified on Site B. Metals include lead as high as 2,020 parts per million (ppm), mercury as high as 61.4 ppm, arsenic as high as 307 ppm, barium as high as 1,250 ppm, and chromium as high as 75.7 ppm. SVOCs include benzo(a)anthracene as high as 75 ppm, chrysene as high as 87 ppm, benzo(a)pyrene as high as 59 ppm, indeno(1,2,3-cd)pyrene as high as 43 ppm, and dibenz(a,h)anthracene as high as 25 ppm. A Remedial Investigation is underway at Site D. Preliminary sampling has identified chlorinated VOCs in soil at elevated levels in one boring on the eastern part of the site. Tetrachloroethene was detected at 2.2 ppm, trichloroethene at 2.7 ppm, cis-1,2-dichloroethene at 120 ppm, and vinyl chloride at 1.2 ppm. Groundwater: On the OU-1 portion of Site B, investigations have identified two distinct contaminant plumes: a BTEX plume and a cVOC plume. Chlorinated VOCs (cVOCs) were found to persist throughout the majority of the Site, whereas BTEX compounds were limited to the eastern portion of the Site to a depth of approximately 10 to 30 ft bls. The cVOC plume is present across the entire Site to an approximate depth of 10 to 30 ft bls. In 2006, an air sparge/soil vapor extraction (AS/SVE) system was installed to address groundwater contamination remaining at the site following the source removal work. The system was operated from October, 2006 to February, 2011. Quarterly groundwater monitoring performed during that time period indicated that the system was effective (approximately 158.67 pounds of VOCs were removed throughout the operation of the system); however, removal of VOCs became asymptotic and operation of the

MAP FINDINGS

PFIZER SITES B AND D (Continued)

S106906497

system was therefore discontinued in February 2011. The system remains intact, however. The AS/SVE system has been effective in reducing BTEX compounds in groundwater to below groundwater standards. Currently, some petroleum-related contaminants are still present; however, the primary contaminants of concern remaining following operation of the AS/SVE system are cVOCs. In February 2011 groundwater sampling on Site B, cVOCs detected in groundwater included: tetrachloroethene as high as 22 ppb, trichloroethene as high as 18 ppb, cis-1,2-dichloroethene as high as 350 ppb, and vinyl chloride as high as 29 ppb. A Remedial Action Work Plan is being prepared to address remaining contamination. On Site D, preliminary sampling performed to date has identified chlorinated VOCs in groundwater on the eastern part of the Site. Tetrachloroethene was detected as high as 4,500 ppb, trichloroethene as high as 1,300 ppb, cis-1,2-dichloroethene as high as 110,000 ppb, and vinyl chloride as high as 15,000 ppb. These contaminants have been identified at levels exceeding standards, criteria and guidance as deep as 30-35 feet below surface grade. Soil vapor: Soil vapor has been monitored quarterly on OU-1 from two sampling points since August, 2010. Chlorinated solvents have been detected in soil vapor at a maximum concentration of 120 ug/m3 (tetrachloroethene). OU-2: The western portion of Site B (Congregation YGS-owned) is currently under remediation. Following description is for conditions prior to remediation. Soil: Soil on OU-2 contains metals and SVOCs indicative of urban fill, which exists throughout this OU, to depths of approximately 10 feet below grade. Metals that exceed SCO include lead as high as 6,730 parts per million (ppm), mercury as high as 16.1 ppm, arsenic as high as 20.5 ppm, chromium as high as 33.6 ppm, and barium as high as 2,000 ppm. SVOCs include benzo(a)anthracene as high as 250 ppm, chrysene as high as 270 ppm, benzo(a)pyrene as high as 220 ppm, indeno(1,2,3-cd)pyrene as high as 110 ppm, and dibenz(a,h)anthracene as high as 58 ppm. Groundwater: Chlorinated solvents have been detected in on-site groundwater and are suspected to be coming from the Pfizer property (OU-1) to the east and south. Prior to the operation of the air sparge/soil vapor extraction (AS/SVE) system on OU-1, cis-1,2-dichloroethene was detected as high as 390 parts per billion (ppb) and vinyl chloride as high as 45 ppb. Groundwater sampling performed in 2008 (during the time period of AS/SVE system operation) indicated that these contaminants have decreased in concentration but are still present: cis-1,2-dichloroethene was detected at 97 ppb and vinyl chloride at 21 ppb. Groundwater sampling in 2008 also detected benzene at 1.6 ppb. Soil vapor: Chlorinated solvents and BTEX compounds have been detected in soil vapor. In May 2009 (the most recent soil vapor data available), tetrachloroethene was detected in each of 2 soil vapor sampling points, as high as 180 ug/m3. Individual BTEX compounds were detected below 50 ug/m3.

Health Problem:

Since the site is fenced and covered with weathered asphalt and gravel people will not come into contact with site-related soil and groundwater contamination unless they dig below the surface. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil

vapor intrusion. The potential exists for people to inhale site contaminants in indoor air due to soil vapor intrusion in any future on-site building development and occupancy.

DEC Region: 2
DER Facility ID: 244426
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"1/2/2004 Reassigned from Rommel to Sun. (Also refer to Spill # 93-03325 for this site)07/08/04 This spill is closed. To be investigated and remediated under Spill #93-03325.01/12/06-The spill is reopened since this spill was caused by gasoline, while Spill #93-03325 was caused by #6 fuel oil. 1/12/2006 - Feng - Called Pfizer Inc and spoke with Manuel Lopez (718-780-0947). He remembers that they have been sent the some report to DEC. He would contact his engineer and find the information DEC need and get back to DEC. (RJF)1/12/2006 - Feng - Faxed the two spill report to Samantha Plourde (718-780-8380) and request to send 1) tank closure report, 2) any other site investigation/site assessment, to DEC. (RJF)1/27/2006 - Feng - Reviewed the Tank Closure Report of 12/10/1999, sent on 1/20/2006 by Pfizer. These 6 USTs were discovered during pre-construction activities in the northwestern corner. The site was a former Texaco gasoline station some time in the 1940's. 6 USTs in the northwestern corner of the site were confirmed by the insurance maps. Pfizer registered and removed the USTs performed from 5/17/1999 to 9/30/1999. 6 soil boringw were done prior the removal activities. Analyticals show SB-6 (10'-12' bg) with high contamination, 840 ppb Toluene, 10,000 ppb Ethylbenzene, 51,800 ppb Xylene, 20,000 ppb 1,3,5-Trimethylbenzene, and 40,000 ppb 1,2,4-Trimethylbenzene. To further delineate the SB-6, SB-6A to SB-6E (12'-14')were drilled and sampled, lab result indicated low VOCs. And removed all the soil above the clay layer (12' bg plus 0.5'-1.0' of the clay). The tankks found no carcks or holes. After tank removal, precipitation occurred for several days and the rain water run into the excavation, water removed and tested, found 6,047 ppb BTEX. All the piping associated with the USTs were removed. Soil removal extented to where the pre-USt removal soil samples contained concentration of VOCs below DEC STARS. Total of 286.18 tons of soil were removed. The report attached with lab analyticals sheet for soil sample, but not indiated the location of sample taken and not mentioned in the narrative text. Backfilled with clean sand and permanent asphalt pavement was placed on top. Requested spill closure. (RJF)1/27/2006 - Feng - Send letter to Pfizer request of 1) groundwater sample in the vicinity of the former SB-6 boring location, 2) clarification of the soil sample presented in the lab report attached in App C. Result due 4/3/2006. Faxed to Scott Glash (Roux). (RJF)02/09/06: This spill transferred from R.Feng to S.Kraszewski.03/06/06: Recieved letter from Pfizer, dated March 2, 2006. Pfizer is requesting that the Department suspend the April 3rd deadline for the subsurface investigation. Pfizer

believes that the Department is not familiar with all documentaiton related to this spill. Pfizer will collect and review all historic documentation and correspondence related to the closure and removal of the gasoline USTs. This information will be submitted to the DEC by March 15, 2006. Pfizer believes that based on the contents of this letter that an additional investigation will not be necessary. - SK 03/24/06: Received detailed summary of closure activities from Pfizer. Currently under review. - SK03/27/06: Reviewed all documents for the UST closure. This additional information was sent in response to the DEC's request for a complete subsurface delineation both on-site and off-site. Pfizer believes that with the information supplied in this closure summary that there is no need for further investigation and NFA should be issued. Pfizer has also included documentation and explanations in response to R.Feng's letter issued January 2006 and previous DEc requests:No post-exc samples taken: Pfizer contests that retrieving samples would cause stockpiling of contaminated soil and leave the excavation open, which is a hazard. Instead, they conducted soil borings to eliminate the hazards associated with an open excavation. Furthermore, Pfizer feels that the soil borings properly delineated the horizontal extent of the contamination since they were conducted until no VOCs were detected by PID.Rainwater from the excavation was sampled and found to contain high levels of BTEX: It was a waste characterization sample, a composite from several sources. Pfizer states this water sample was mixture of rainwater from the USTs, the excavation and waste water used to clean each UST.A soil samples with highly elevated VOC concentrations was detected but it was not mentioned in the report summary nor is it given a location on the site plan: This sample was als a composite sample, collected from each UST. Sand material was discovered within the USTs and this sample was used to characterize the tank solids for proper disposal. It did not come from the excavation.R.Feng requests GW samples: Pfizer attached results from two GW samples taken from the former tank area in June 2004. The samples were takenf rom 8 to 10 fbg using low-flow purging techniques. Actetone was detected in both samples, a common laboratory contaminant. Naphthalene and Xylenes were detcted but below GW standards.Boring logs, PID logs, information of perched GW and explanations of work methods are also included in response to a February 2000 letter from DEC to provide information for these shortcomings in the UST closure report from 1999. - SK03/27/03: Called Manuel Lopez to ask about the report. He said it would be best to contact Omar at Roux & Associates. I called and left Omar (631-232-2600) a voicemail to call me back. - SK03/28/06: Rob Kovacs for Roux and Associates called in place of Omar. I asked Rob about the clay layer and he said based on historic production wells used by Pfizer and Roux & Associates' experience with the surrounding area they have mapped out the extent of the clay layer. Rob is emailing me a map with the known extent of the clay layer. - SK03/31/06: Received PDF of the geologic cross section for that area and an overhead map. After careful consultation and consideration with supervisor J.Kolleeny, we feel that based on all of the available information at hand, this spill poses no threat to GW, the environment or the public. NFA letter sent out. Closed out. - SK

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO/DEMEO"7/14/2002 - 21:05pm: Ms Zhao spoke with Nathan Edeson. Spill has been contained. There is no drains or valves involved. Clean up was in progress by contractor Tradewind by the time of contact. Zhao has requested clean up statement from Tradewind and will follow-up on it.7/16/2002 - A follow up call Zhao made to Mr Edeson. Spill cause was found due to the gauge system, not the pump. Tradewind went back yesterday and have got clean up completed. Clean up statement will be furnished within two days by Tradewind. Mr Edeson will then forward it to DEC with some requested clean up pictures.9/17/2003 - Spill closed upon a site visit on 9/15/2003 and final clean up statement received on 9/16/2003.
Remarks: BUILDING 16 (MAIN BUILDING), FIRST FLOOR. LEAK FROM A PUMP ON THEIR HEATING SYSTEM. MOST WAS CONFINED WITHIN THE BUILDING. ABOUT 5 GALLONS SPILLED ONTO THE SIDEWALK. SPEEDY DRI APPLIED BY PLANT EMPLOYEES. TRADEWIND ENVIRONMENTAL WAS CONTACTED FOR CLEAN UP. SIDEWALK HAS BEEN CLEANED UP. THEY'RE NOW WORKING INSIDE. PUMP TAKEN OUT OF SERVICE FOR REPAIRS.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SUN"7/6/04 - AUSTIN - TRANSFERRED FROM GARDINEER TO SUN - RELATED TO SPILL #990181 - END07/08/04-Sun- Also refer to Spill # 99-01811 for the same site. 02/09/06: This spill transferred from R.Feng to S.Kraszewski.03/06/06: Recieved letter from Pfizer, dated March 2, 2006. The letter states that the Department's verbal request for documentation of UST closure from 1993 is unnecessary since significant remedial work has taken place to address this spill since 1993 and also an NFA letter has been issued. The NFA supposedly declares that the VCA (Voluntary Cleanup Agreement) performed by Pfizer has been completed. SK spoke with Manuel Lopez, Director of Environmental Health and Safety for Pfizer. I requested a copy of the NFA letter be faxed for confirmation. - SK03/07/06: Reviewed NFA letter faxed by Pfizer. Will discuss with J.Kolleeny and K.Tang. - SK04/05/06: Apparently, when this site became involved with the Voluntary Clean-Up Agreement (VCP) the spill number should have been closed. This spill closed out. - SK

"SANGESLAND"4/2/2001 Sangesland and NYCDEP Wai Man Wan made a site visit to the Pfizer facility to look for a reported Acetone leak. After initial inspection, DEC - ECO Shawn Dussault arrived to make a similar inspection of the roof top equipment. According to Pfizer Engineer Mr. Daniel Shiel the following is a description of the process and then the system problem: Process: Acetone is used in the process of coating pills. After the material leaves the "pills bath" area, the vapor acetone is collected and piped to a chiller/condensor on the plant roof. This "Edwards Unit" chiller/condensor has 3 stages which drops the vapor temperature in 3 steps to 85°F below zero. At that point the acetone is in liquid form and is recovered via pipe and collected. This material is then tanked and removed from the site. (Pfizer states that a company purchases this recondensed acetone from them). Problem: Somewhere in the second stage of this unit is a leak. The Pfizer representative stated that there is probably a crack in the line someplace, but the exact location has not been found. Pfizer states that they first became aware of the problem in early March 2001 and took the system out of service for approx. 10 days to perform routine maintenance to the unit and to try to find the problem. The specific problem was not found and not fixed. The equipment was put back into operation. At the site visit, it was clear that acetone was leaking to the atmosphere. Pfizer says that they have done a mass balance which shows that they are still retrieving approx. 91% of the total process acetone, above their legal limit (limit is someplace in the low 80's %). Pfizer also had LEL meters on the equipment to show that they have remained below approx 50% of the LEL explosive limits. However, there is no alarm on this meter. The meter is read several times per day by plant personnel. Pfizer rep also said the units are actually 2 separate parallel process lines running at the same time. He believes that the leak is only on one side of the system. The system can operate with only one side of the process system in operation, only at a lower volume and therefore a lower pill production rate. In order to repair the system, the unit would need to be lifted off the roof of the building, lowered to the street level, opened and re-welded. Pfizer said they had an equipment rep on site later today to quote them on the cost and time needed to build a replacement unit. ECO Dussault issued 2 tickets. 6NYCRR Part 595.3.a.2.ii and .iii with a May 17, 2001 court appearance date. Since this is a release to the atmosphere it may include the NYSDEC Air Unit. Since it is a material AFTER production (of the pills) it may be considered by NYSDEC RCRA Dept. 4/3/2001 Officer Dussault spoke with Dan Shiel (Pfizer) later on the afternoon of 4/2. Mr. Shiel said that Pfizer met with the manufacturer of the Edwards unit and he said it would take about 6 to 8 weeks to build and install a new unit. Until that time, Mr. Shiel said they may try to find a way to run just the first and third stage of the system and bypass the second unit. This will still allow some condensation of the process acetone and may allow the production line to operate (perhaps at a reduced rate)

Remarks: caller states that the company has had a leak since June on the roof of the building from the Edwards unit. They do not want to fix this due to the down time and the cost. Dennis Pappas engineer of charge

DEC Memo: 02/02/11- Zhune spoke to Russel Downey 908-413-0811. Site is a Pfizer Factory. Property is going to be sold. During investigation found groundwater contamination. Requested report. Mr. Russel will send the report.04/04/12-Roux Associates sent the Petroleum Investigation Report dated June 24, 2011.Property solution performed Phase I and Phase II subsurface investigation activities at site E and F on behalf of Acumen Capital Partner, LLC (Acumen)(buyer). Phase II.- Included the completion of 24 soil borings, with the collection of 24 soil borings samples and 7 groundwater samples were collected from temporary well. Of the 24 borings completed 12 were located on Site E and 12 were located on Site F. Four (4) of the seven groundwater

samples were collected on Site E, and the remaining three collected on Site F. Only The property solution's borings designated SB-19, SB-20/GW-20, SB-21, SB-22/GW-22, SB-23, SB-24 and SB-25 were completed within the former Main Plant near the former Fitness Center. The analytical results indicated that soil and groundwater collected from boring SB-22/GW-22 (located within the Former Fitness Center) contained elevated concentrations of VOCs. The soil samples collected from the four (4) borings located near SB-22 as well as borings located at the west end of the former Main Plant (SB-19 and SB-20) did not have any exceedances. The groundwater sample collected from boring SB-20/GW-20) at 15 to 16 ft bls. detected VOCs below the applicable limit. In response to the identification of groundwater impacts in phase II beneath the Main Plant, Roux Associates on behalf of Pfizer conducted focused investigation activities in April, May and June 2011. The focused investigation included the installation of four(4) deep wells BMW-10, BMW-11, BMW-12, BMW-13 and a total of three (3) soil borings TPNE, TPSE, TPSW. Groundwater samples were collected from wells BMW-10 through BMW-13 and soil borings TPNE, TPSE, TPSW. The analytical results indicated the following VOCs (BTEX, 1,3,5 trimethylbenzene, Isopropylbenzene, naphthalene, n-propylbenzene, and p-isopropyltoluene) were detected above the acceptable limits in the groundwater sample collected from BMW-11. LNAPL was found in well BMW-11 at a thickness of 2.76 feet. A sample of LNAPL was collected for gas chromatography product characterization analysis. The LNAPL was identified as leaded gasoline. The groundwater sample collected from boring TPNE indicated the following VOCs(BTEX, 1,3,5 trimethylbenzene, Isopropylbenzene, MTBE, naphthalene and n-propylbenzene) detected above the acceptable limits. BP evaluated Groundwater flow directions in shallow perched water. BP reported groundwater flow to be in the northeast direction at the BP service station. Pfizer's assessment evaluated Groundwater flow directions in deep water. Pfizer reported that Groundwater flow in the deep zone was to the southwest. 04/11/12- Roux Associated Inc. sent the Supplemental Petroleum Investigation Report dated July 22, 2011 05/07/12- This spill has been transferred to Hassan Hussein of the Hazardous Material Unit. 1/24/2013 - Raphael Ketani. The spill case for this Commercial Property at 630 Flushing Avenue, Brooklyn, 11206 was transferred to me. The spill was called in on 2/1/11 due to the discovery of oil contaminated soil samples. The block and lot are 1720 and 1. The deed date is 2/11/11. The property was sold by Pfizer, Inc., 235 East 42nd Street, NY, 10017 to Acumen Capital Partners (ACP) BK I, LLC, 37-18 Northern Blvd., Ste. 300, LIC, 11101. PBS is #2-017329. There were 31 tanks. Twenty five (25) were closed, 1 was converted to non-regulatory use and 5 are active. The tank sizes ranged from 62 gals. to 30,000 gal. The products contained were #6 oil, #2 oil, diesel, gasoline and other. Presently, there are 6 active tanks. They range in size from 62 gals. to 20,000 gals. The two 20,000 gal. tanks contain #6 oil and others (300 gal., 275 gal. and 62 gal.) contain diesel fuel. A 275 gal. tank contains #2 heating oil is also active. 3/18/13 - Raphael Ketani. Matthew (Mat) Carroll, P.E., of Tenen Environmental, LLC (646) 606-2332, ext 103 [121 West 27th Street, Suite 1004, New York, NY 10001, mcarroll@tenen-env.com] called today regarding the site. He is the new consultant for ACP. I tried to contact him, but could only leave a message. Mr. Carroll called me back. He said that Pfizer is still involved in the remediation of the property, even though ACP bought the site. They

are the responsible party. Mr. Carroll will send me the two ROUX reports for my review. However, Pfizer is contending that there is a gas station upgradient which is the source of the contamination. Mr. Carroll sent me the following contact information: Please address all correspondence related for Spill #1011062 to: Robert Kovacs, Sr. Environmental Scientist Roux Associates, Inc. 209 Shafter Street Islandia, New York 11749 rkovacs@rouxinc.com Please also cc Pfizer, the site owner and myself. Office addresses and email addresses are as follows: Matthew R. Basso, MS, CHMM Manager, ERT Pfizer 100 Route 206N (M/S 414) Peapack, NJ 07977 Matt.Basso@pfizer.com Jeffrey Rosenblum ACP BK 1 LLC The Standard Motor Products Building 37-18 Northern Boulevard, Suite 300 Long Island City, NY 11101 jrosenblum@acumeny.com 3/28/13 - Raphael Ketani. I reviewed the 6/24/11 Petroleum Investigation Report which was produced by Roux Associates, Inc. for Pfizer. Groundwater impacts were found under the main plant on the north side where the former Fitness Center used to be. Roux did investigations during April, May and June of 2011. Borings and wells were installed. The data indicates that the source is the BP Service Station (formerly AMOCO; active spill #0104597) to the north at 655 Flushing Avenue. The BP investigation was limited to the shallow soil and groundwater above the silty clay (which averages 10 feet bgs). Pfizer investigated the groundwater in the deeper zone. Roux states in the report that their evidence for BP being the source is the following: 1) BP is 70 feet away from the main building (site E) and has a long history of impacts to the soil and the groundwater 2) petroleum contamination was found beneath the Pfizer main plant as part of utility work which took place by the utility company (they don't state who this is, but it was probably Con Ed) - the utility company filed reports regarding the contamination 3) the deeper groundwater zone is hydraulically downgradient from BP 4) almost 3 feet of NAPL was found on the south side of Flushing Avenue and the fingerprint of the oil indicated that it was leaded gasoline 5) Roux identified extremely elevated VOC concentrations in the deeper groundwater zone - there were 38,700 ppb of total BTEX in the groundwater 8 feet south of BP in the deeper zone 6) Pfizer had 2 small USTs under the north part of the main building (former Fitness Center) - the soil results did not indicate any impacts from the USTs - the USTs were in 12 inches of concrete in an intact vault and were decommissioned in 1988 7) information from Pfizer and BP for routine groundwater sampling provides data from the south side of Flushing Avenue supporting that the Pfizer USTs did not leak 8) MTBE is present in the deeper groundwater samples from the Pfizer site, but the timing does not support that the impacts are related to the Pfizer operations - Pfizer decommissioned the USTs in 1988 before the widespread use of MTBE in 1992 - MTBE bearing gasoline was stored at BP for years and BP had many releases of gas - in 2001 there was a gasoline release with MTBE where the MTBE concentrations were up to 385,000 ppb in the groundwater. The main plant consists of buildings 55, 16, 16A, warehouse A and warehouse AA. The majority of the main plant (site E) is buildings 16 and 16A - 8 story buildings. Operations at the plant ceased during November 2008. On 2/11/11, the ownership changed to Acumen Capital Partners (ACP) BK I LLC. Site F is the parking lot to the south. Property Solutions performed the Phase II during October 2010 and January 2011 for sites E and F. They did 24 borings. Seven (7) groundwater samples were taken from temporary wells. Twelve (12) borings were performed at site E and 12 borings were performed at site F. Four (4) groundwater samples were taken at site E and 3

PFIZER (Continued)

U003074670

groundwater samples were taken at site F. A small portion of the sampling was done near the former Fitness Center in warehouse A and pertains to this investigation. The borings and wells were SB-19, SB-20/GW20, SB-21, SB-22/GW-22, SB-23 to SB-25. Groundwater from G-22 was taken on 1/6/11 and had elevated VOCs of gasoline. The sample was collected at 16.5 to 20 feet bgs, below the perched water table at 10 feet bgs. Anthropogenic fill is present from 5 to 12 feet bgs. Silty clay is present throughout the area and is 15 feet thick. The Upper Glacial Aquifer underlies the silty clay at 20 to 30 feet bgs. Thin perched lenses of groundwater are present throughout the area. A perched water table is present at 5 to 8 feet below the site. The perched water table follows the surficial topography of the clay. The clay is 6 feet below the southwest part of the BP site and 11 feet below the northeast part of the site. The BP wells are in the perched horizon. BP reported that the groundwater flowed to the northeast. Permanent wells BMW-10 to BMW-13 indicate that the deeper groundwater flows to the southwest. The deeper groundwater is likely affected by pumping by NYCT for its subway tunnels. Their pumping wells are to the west of the main building. The pumping also likely affects the vertical gradient. Gauging took place at BMW-10 to BMW-13 on May 3 to June 8 during 2011. LNAPL was found to be 2.76 feet thick at BMW-11 on 6/8/11. Property Solutions did borings SB-19 to SB-25 near the Fitness Center. Only SB-22 at 7.5 to 8 feet bgs had soil VOCs that were above the unrestricted CP-51 standards. There were 5 VOCs above the standards. Naphthalene at 16,000 ppb, n-butylbenzene at 14,000 ppb, n-propylbenzene at 7000 ppb, ethylbenzene at 2300 ppb. The soil samples from the rest of the borings had results that were below the unrestricted standards. On 1/26/11, Property Solutions collected groundwater samples from GW-20 and GW-22. Low levels of BTEX were detected at 15 to 16 feet bgs. The sample from GW-22 beneath the Fitness Center had many VOC hits that were above the unrestricted standards. Permanent well BMW-11 had many VOC hits that were above the unrestricted standards. From 6/6/11 to 6/8/11, Roux took groundwater samples from 3 borings. All had samples with exceedences. Groundwater samples from boring TPNE (in the sidewalk at the south edge of the BP station) were taken at 13 to 15 feet bgs, 15 to 17 feet bgs, and at 17 to 19 feet bgs. There were many VOC exceedences amongst the samples. The highest BTEX result was from the sample from 13 to 15 feet bgs. The groundwater samples that were taken at 15 to 17 feet bgs and at 17 to 19 feet bgs from boring TPSW directly downgradient (southwest) of the station had low VOC hits. I finished my review of the 6/24/11 Petroleum Investigation Report. I looked at Plate 1 - Generalized Hydrogeological Cross Section - of the report. All of the wells - temporary and permanent - were partially screened at the top in the silty clay. This is not proper practice. There is no explanation in the report why this was done. Any groundwater samples that would be taken from these wells would entrain some of the clay sediment due to disturbance of the clay as a result of the collection process. So, the geochemistry of the groundwater is not representative of just the Upper Glacial Aquifer. Analytes which had adhered to the clay flakes were incorporated in each groundwater sample. Additionally, water samples which are taken from soil borings typically do not have as high concentrations of analytes as would samples from permanent wells. Also, from the boring logs in the report, it is not entirely clear that the perched aquifer and the glacial aquifer are truly separated at a distance. If the NYCT is pumping groundwater, then their actions could cause some groundwater

to seep down from above. _____ Comments by Ketani:
-----The soil results from SB-22 for the sample from 7.5 to 8 feet bgs in the former diesel and gasoline USTs area (the former Fitness Center) had naphthalene and n-butylbenzene hits above 10,000 ppb. The ethylbenzene hit was 2,300 ppb and the n-propylbenzene hit was 7,000 ppb. Though the soil results for the samples from SB-21 and SB-23 to SB-25 which surround SB-22 did not have exceedences or were non-detect. The groundwater results from temporary well GW-22 in the former diesel and gasoline USTs area had high VOC exceedences in the sample from 16.5 to 20 feet bgs. However, the groundwater results from temporary well TPSW about 65 feet to the east and permanent well BMW-10 about 35 feet to the east have a small number of very low hits and no exceedences. These soil and groundwater results suggest that one of the UST systems probably leaked. More borings and permanent wells need to be installed in this area. Additionally, the BP Service Station that is referred to in the report has an active spill number, #0104597. According to a report in the e-docs, groundwater flow in the perched water table is due northeast, away from the Pfizer site. 3/29/13 - Raphael Ketani. Next, I reviewed the Roux Supplement to Petroleum Investigation Report dated 7/22/11. Of significance was that staff from Roux stated in this Supplement report that the former DEC case manager should obtain all of the UST and piping information for the BP Service Station from the respective DEC file. They also stated that the Phase I and the Phase II were not done for Pfizer. So, Pfizer can't vouch for the reliability of the reports. Also, they stated, Acumen Capital Partners may consider the reports to be confidential and may not feel comfortable releasing them to the DEC. However, Roux did provide some information regarding the USTs under the Pfizer site and neighboring facilities in this Supplement report. The staff from Roux stated that tank closure reports weren't required to be submitted when the tanks were decommissioned during 1988. They state that soil samples were collected from TPNE, TPSW, TPSE, BMW-10 to BMW-13, but the samples were not submitted to the laboratory for analysis. The information contained in the report consisted of documents related to the UST decommissioning which took place throughout the site and Sanborn maps. The 550 gal. diesel UST (#211) and the 550 gal. gasoline UST (#212) under the Fitness Center were pressure tested during 1984 and held the pressure (9/27/84 and 10/24/84 Tone Gasoline Tank and Pump Inc. letters). In a 12/28/88 tank decommissioning letter, it is stated that tanks #211 and #212 in the former Wha garage were cut up from 12/13/88 to 12/16/88. In the process of cutting them up, it was noticed that the gasoline UST had leaked into the vault. The gasoline was collected and the vault was ventilated in order to remove the vapors. It was noticed that the floor of the vault was pitted due to leaked gasoline. However, it was reported in the letter that the tank removal crew did not notice signs of chipping of the floor or any loose concrete. _____ Comments by Ketani:----- From the information in the 7/22/11 report, it is apparent that there was at least a gasoline spill. How the gasoline UST could have passed its integrity test in 1984 and be found to have leaked anyway is not clear. There are no details regarding how the testing was performed. So the test may not have been valid compared to later integrity testing methods. Additionally, the pitted floor suggests that the leaking had been going on for some time. Also, there still is no information regarding the locations of the associated piping for the USTs and the locations of the pump

PFIZER (Continued)

U003074670

islands. Clearly, more investigation needs to be done. A draft letter was submitted to Hassan Hussein, EE III and head of Unit C, requesting that a work plan be submitted for conducting an investigation around and under the vault, next to any remaining piping and in the vicinity of the pump islands. Soil and groundwater sampling was requested. The letter was approved by Mr. Hussein and was sent out. A due date of April 30 was set for submission of the work plan. 4/15/13 - Raphael Ketani. Mr. Kovacs (631) 232-2600 tried to call me today regarding the March 29, 2013 letter and left a voice message. I tried to contact him, but could only leave a voice message. 4/16/13 - Raphael Ketani. Mr. Kovacs and I discussed the site and the soil and groundwater results for SB-22 and GW-22, respectively. I pointed out that the soil contamination results from the surrounding borings at the same level did not have exceedences. Also, the groundwater results for GW-22 were higher than a sidegradient well that was sampled at the same depth. I added that there was a letter in the Roux 7/22/11 report which stated that a gasoline leak had been discovered. Mr. Kovacs argued that all of the contamination was from the BP site across the street. I reiterated that the soil and groundwater results and the letter suggested a local source of contamination. I asked him for soil and groundwater contamination delineation. Mr. Kovacs stated that the tank vault was in the former loading dock area, which had been filled in with 4 feet of concrete. However, they had cored thick concrete before. So they could do borings in this area. Mr. Kovacs added that Pfizer was not objecting to doing more investigative work in this area, but that they wanted to make sure everyone was on the same page and that the DEC was considering the groundwater flow from the northeast from the BP site. I repeated my previous statement that the DEC had determined that there is a local source of contamination under the former Pfizer site and that delineation is being required. Mr. Kovacs stated that he will talk to the people at Pfizer. With that, the conversation ended. 4/17/13 - Raphael Ketani. Mr. Kovacs sent me an e-mail requesting an extension of the deadline for submitting the work plan. He asked for a deadline of June 3, 2013. I granted his request. 6/4/13 - Raphael Ketani. I reviewed the Work Plan for Additional Petroleum Investigation Activities dated 5/29/13 and submitted by Roux Associates on behalf of Pfizer, Inc. The work plan contained the same information and arguments as I had read in the previous 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. Roux Associates added that the timing of the use of the gasoline and diesel USTs below the former fitness center and the soil data generated by Property Solutions does not support that the impacts associated with spill #1011062 are related to the Pfizer operations. Pfizer removed the USTs in 1988 before the widespread use of high concentrations of MTBE beginning in 1992. There was no MTBE in the soil samples below the Pfizer site where the USTs used to be. High concentrations of MTBE were found in the groundwater beneath the former fitness center. Property Solutions collected 7 soil samples from 5 borings in the vicinity of the USTs and found only slight soil contamination in one sample. In the work plan, Roux proposes conducting three tasks. Task 1 would be to do one round of groundwater gauging and sampling at wells BMW-10 to 13. Roux would request that the DEC gain access for them to the wells on the BP site. They will have the samples tested only via method 8260. Task 2 would involve submitting a report of their findings. Roux will make recommendations for either additional investigations, or to close the

PFIZER (Continued)

U003074670

spill case, or to link the spill case to the BP site. Task 3 involved having a meeting with the DEC to discuss their findings and additional data. I drafted a response letter for the review of Mr. Hussein. In the letter, I explained that the information and statements that were in the 5/29/13 work plan were the same as were included in the 6/24/11 Petroleum Investigation Report and the Supplement to Petroleum Investigation Report dated 7/22/11. So, the Department was again requesting that a soil and groundwater investigation take place as previously requested in our 3/29/13 letter. I added that we will send a letter to Acumen requesting their cooperation for allowing the wells to be installed. However, it would be up to Pfizer to obtain permission from BP for gaining access to their wells. I set a deadline of 7/12/13 for submission of a new work plan. 6/5/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out. 6/6/13 - Raphael Ketani. In response to the 6/5/13 letter, Matthew Basso of Pfizer called me. He tried to explain to me that Pfizer wasn't responsible for the contamination under the vault. He used the same information as had been presented in the 6/24/11 report and the 7/22/11 report. I explained to him that his discussion wasn't going to change the Department's request for a soil and groundwater investigation. I added the lower groundwater hits of the deep well to the northeast, the finding of free product in the vault, the discovery of soil contamination in the unsaturated zone below the vault and the presence of high contamination in the groundwater just under the vault. Mr. Basso explained that he had witnessed the consultants for the BP station across the street doing remedial work. He said that they were injecting treatment solutions. Mr. Basso added that the gas station has lost a lot of product and it is going under the former Pfizer site. I told Mr. Basso that the Department was aware of the problems at the BP station and that they were being addressed. I did admit to him that some of the contamination may be going under part of the former Pfizer site, but that the contamination in the former vault area was a different matter that was solely the responsibility of Pfizer. Mr. Basso stated that the groundwater was flowing from the BP site to the former Pfizer building. I told him that this was not true for the perched water table. He also stated that he didn't believe the new owners of the property, Acumen, would allow Pfizer to drill through the floor of the former fitness center. I told him that I will write a letter requesting Acumen's cooperation regarding the investigation. At the end of the conversation, Mr. Basso requested a meeting with the DEC. I told him to talk to everyone at his end and get them to agree on a date for next week. He said that he will do this. Later, Mr. Kovacs (631) 232-2600 sent me an e-mail stating that Pfizer, Acumen and Roux would be able to meet with staff from the DEC on Monday, June 10th, at 2:00PM. I confirmed that this was an acceptable meeting time. A draft letter was submitted to Mr. Hussein which requested the cooperation of Acumen in allowing Roux Associates to conduct an investigation in the vicinity of the vault. Mr. Hussein approved the letter and it was sent out. 6/10/13 - Raphael Ketani. The meeting took place as scheduled. In attendance were Matthew Basso from Pfizer, Robert Kovacs and Charlie McGuckin from Roux Associates, and Hassan Hussein and myself. The former Pfizer site and the BP gas station to the north were discussed. Mr. Kovacs and Mr. McGuckin presented the same information as I had read from previous reports. They showed one new map which showed that, at one time, the Wallabout Creek had flowed near the vicinity of the former vault and in adjacent areas.

PFIZER (Continued)

U003074670

So the area contained stream sediments. Mr. Kovacs and Mr. McGuckin stated that the gas contamination in the former vault area was from the BP site due to deep groundwater flow towards the southwest in the regional aquifer. They commented that the NYCT was pumping from a well to the southwest for the G train line. So, this well had moved groundwater flow to the southwest. I stated that groundwater flow was to the northeast in the perched water table and to the southwest in the regional aquifer. I stated that the gas contamination in the vicinity of the vault was from a former gas UST that had been observed to have leaked. I also stated that there was gas contamination in the shallow unsaturated soil in the vicinity of the vault. So the contamination in the immediate vicinity had come from the UST, not the BP site. They countered that the gasoline below the vault contained MTBE and this chemical was not in the Pfizer gas UST when it was removed in 1988. They also stated that the groundwater analytes had the signature of BP gas. I told the Roux consultants that the wells were never screened properly. Some were screened in the clay. So it is not clear what the true groundwater chemical makeup is. I requested a work plan for conducting 4 soil borings around the former vault location, installing a properly screened well in the shallow zone and another in the deeper regional aquifer, and to take a Shelby tube sample and do permeability testing for the confining layer between the two bodies of groundwater. Mr. McGuckin objected to the request for more investigating. He said that Pfizer had done enough to determine subsurface conditions and that there was no point in doing more work. He again stated that all of the contamination was due to the spilling at the BP station. He added that there was a well 75 feet to the east of the Pfizer vault with 3 feet of product in it. Mr. Basso stated that this gasoline could be fingerprinted to prove that it belonged to BP. I added that more soil and groundwater data must be obtained in order to determine the subsurface conditions and in order to determine where the contamination had originated from. Otherwise, BP will not accept responsibility with so little information. Mr. Basso said that he will approach his management with the DEC demand and our argument why more work needed to be done. Following this meeting, Mr. Hussein and I had a meeting with June Feng, the DEC project manager for the BP station at 655 Flushing Avenue, Brooklyn (spill case #0104597). Specifically, we asked her whether the BP investigation had done off site delineation of the spill and whether there presently were leaking USTs and product on the groundwater. Ms. Feng said that, presently, there were no leaking USTs and no product on the groundwater. She said that wells were only installed on the BP property. I told her about the 3 feet of product that had been found in the Roux Associates well BMW-11, which was about 100 feet east of the vault in question and downgradient from the BP station (as regards the deeper aquifer flow). Ms. Feng asked whether the gasoline had ever been fingerprinted. I told her "No." She said that she could not understand how gasoline could make its way down from the perched water table to the regional aquifer. I told her I was not sure either how this had happened, but the Roux Associates consultants were stating that this happened. She then asked whether the gasoline could have followed a utility conduit. I told her that this was possible, but I wasn't sure it would stay in the aquifer as gasoline floats on water. Ms. Feng and I thought about how the gasoline could have ended up below a perched water table, but we did not find an answer. 6/11/13 - Raphael Ketani. Ms. Feng sent me a "c-c" for an e-mail she had sent

PFIZER (Continued)

U003074670

to Nicholas Onufrak of BP. She warned him that Pfizer and their consultants were telling the DEC that the gasoline contamination was from the 655 Flushing Avenue site. Later, Mr. Onufrak responded back that he had received the e-mail.6/12/13 - Raphael Ketani. Mr. Basso sent me an e-mail in which he stated that Pfizer was working on a work plan and intended to submit it by July 12, 2013.7/22/13 - Raphael Ketani. I reviewed the 7/18/13 Workplan for Additional Focused Subsurface Investigation. The work plan was written in response to the DEC 3/29/13 letter in which additional investigative work was requested around the vault. ROUX also made the same arguments that the source of the contamination under the former Pfizer plant is from the BP service station across the street. They also recapped the results of the previous investigations from 2011. They state that NAPL was found on 6/8/11 at BMW-11 and was identified as leaded gasoline. Also, they state in the report that, given the geologic and hydrogeologic conditions in the subsurface and the presence of NAPL in the deep groundwater zone downgradient of the BP station and the presence of MTBE in the groundwater, it is strongly suggested that the impacts at SB-22/GW-22 are not the result of former Pfizer operations, but the result of the long history of releases from the BP station.ROUX will do a focused field investigation involving a Phase I and, if necessary, a Phase II. After the work is done, a summary report will be prepared and a meeting with DEC staff will be requested to discuss the results and determine what should happen next. The Phase II will be performed only if contaminated soil is found below the former UST locations. Five shallow soil borings will be performed around the vault and dispenser area to the top of the silty clay. Soil and groundwater samples will be analyzed via methods 8260 and 8270. The perched water table samples will be collected from 3 temporary wells. Only temporary wells can be installed due to the height restrictions inside of the Fitness Center (it will only accomodate small equipment). Undisturbed soil samples will be collected from the silty clay and the sandy layer below it for permeability testing. If there are no discernable soil impacts in the shallow soil, then they will bore down below the silty clay layer and sample the soil just above the deep groundwater. The existing deep wells BMW-10 to BMW-13 will be gauged and sampled. If the Phase II is necessary, then two additional wells will be installed at two more locations within the Fitness Center footprint and the groundwater will be sampled beneath the silty clay. The Phase II would also involve the collection of additional perched water samples.I looked at the proposed soil boring and well locations depicted in Figure 7 of the report. The locations seemed reasonable.I drafted a letter for the review of Mr. Hussein in which I stated that the Department had approved the 7/18/13 work plan.7/24/13 - Raphael Ketani. Mr. Hussein approved the letter and it was sent out today.

Remarks: SOIL SAMPLES POSITIVE FOR PETRO. CONTAMINATION, CLEANUP PENDING.

Site Description: The Citric Block Site is located in the Williamsburg section of Brooklyn, New York. Gerry Street, Harrison Avenue, and Union Avenue border the Citric Block Site to the north, east, and west, respectively, while Flushing Avenue border the Citric Block Site to the south. The Citric Block Site is situated within a high-density, mixed urban residential commercial industrial zone, approximately one mile east-southeast of the East River. Pfizer decommissioned the Citric Block Site for future redevelopment and/or beneficial use. As part of the decommissioning process, all Citric Block Site buildings were demolished, with demolition activities being completed in August 1995. Presently, the reinforced-concrete slab foundation is the only aboveground remnant of the former buildings. The concrete slab is continuous throughout most of the Citric Block Site, and varies in thickness between approximately 0.5 and 1.5 feet. The remaining portion of the Citric Block Site is covered with asphalt pavement approximately two inches thick with a four-inch aggregate subgrade. The entire Citric Block Site is surrounded by a 10-ft high chain-link fence, and is under continuous security surveillance. The Citric Block Site was developed for chemical manufacturing between 1854 and 1888 and it operated continuously until 1985, and was demolished in 1995. Redevelopment is likely to include paved areas for outdoor activities in the center of the Citric Block Site and a small park in the western portion. The remainder of the Citric Block Site would be capped by either the existing concrete slab or by new pavement. The cap will prevent any direct exposure of future users of the property with fill material. Institutional controls involving Deed restrictions have been implemented. The property can be used for industrial/ commercial usage. Site Management Plan requires proper management of all future subgrade construction activities and proper notification to the Department.

Env Problem: The site has been cleaned up. Post remedial groundwater monitoring was satisfactory.

Site Description:

The "Organics/Suciac Block" site is located in the central portion of the Pfizer Inc. facility in the Williamsburg section of Brooklyn, NY. Gerry Street, Harrison Avenue, Union Avenue and Wallabout Street border this block. The site was first developed for chemical manufacturing between 1854-1888. Operations continued there until 1989 and all buildings were demolished by March of 1995. The Organic/Suciac block is situated within a high-density, mixed urban/commercial/ industrial zone. Pfizer decommissioned the Organic/Suciac block with the intent to utilize it for future redevelopment and/or beneficial use. As part of the decommissioning process, all buildings were demolished. The present concrete slab is continuous throughout the Block and varies in thickness from 0.5 and 1.5 feet. In 1997, waste from the site was excavated and disposed off site, which included 18.12 tons of mercury and lead hazardous soils. Also, a total of 1,930 tons of benzene hazardous soils were excavated and disposed off-site. In 1999/2000, the excavated soil (approximately 420.3 tons) was classified as a petroleum contaminated non-hazardous material, and was transported off-site and disposed. Institutional Controls: On June 22, 2001, Pfizer presented the deed restrictions for recording in the Kings County Registrars Office. These restrictions state that unless additional response actions are performed at the Site to allow its use for residential purposes, the Site shall be prohibited from being used for purposes other than industrial, commercial and/or recreational purposes without the expressed written permission from the Department.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Common Name of Substance: Diesel

Equipment Records:

B01 - Tank External Protection - Painted/Asphalt Coating
I04 - Overfill - Product Level Gauge (A/G)
D11 - Pipe Type - Flexible Piping
F06 - Pipe External Protection - Wrapped
C01 - Pipe Location - Aboveground
E00 - Piping Secondary Containment - None
K00 - Spill Prevention - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
H01 - Tank Leak Detection - Interstitial - Electronic Monitoring
A00 - Tank Internal Protection - None

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with

a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: 7/26/2005 Sangesland spoke to Christopher DeCarlo (cell #201-694-4943) with Flemming Lee Shue Environmental Consulting.Approx. 20 years ago this site was a gasoline station.There is no DEC - PBS or Spill history for the site.Chris DeCarlo works for the new owner of a property which is now under construction. Apparently the former owner dug out the tanks and left a pit. Now that the new owner has started construction, approx 8 ft below the bottom of the pit they found floating gasoline product.

They are in the process of removing product and contaminated soil. Since the consultant knew the DEC procedure and had already started, no contaminated soil letter was sent. 7/26/2005 Sangesland - a second "Spill Report" came in on this site (#0505029). A vapor complaint from a neighbor with the smell of gasoline (95 degree temp today). Sangesland left a voice mail with Chris DeCarlo at Flemming Shue asking him to confirm that the stock piled material is covered and as much "Vapor Abatement" as possible has been done. 9/19/05-Reassigned to A. Obligado. (Sun)9/19/05- Obligado- Reviewed fax from Christopher De Carlo of Fleming Lee Shue consultants dated 9/8/05 requesting case manager be assigned to site. Called De Carlo to give him contact info. DeCarlo stated that they completed excavation of soil and taken clean soil endpoint samples. GW sample from bottom of excavation is 18 ppm MTBE and 3.9 ppm benzene. Asks if they can request closure of spill number. Tell him the NYSDEC needs to see the UST closure report before a judgement can be made. DeCarlo says report is in progress and NYSDEC should receive it shortly. 9/19/05 - Obligado - Follow up phone conversation with De Carlo. Ask him to send DEC foundation and vapor barrier details. Inquire about site status - site construction on hold pending permit for excavation. Ask him not to begin construction until the department reviews designs and UST excavation results. 10/28/05 - Obligado - Received phone call from De Carlo, says he had sent DEC Remedial Action Report and was waiting for DEC response. Told him that haven't seen report yet, and to email pdf of report. 10/31/05 - Obligado - review Remedial Action Report. 5 gasoline USTs removed previously, no records of soil disposal or analyticals. Upon beginning of FLShue's involvement of the site, the USTs had already been removed and an excavation 3 to 4 ft deep was on site. Continued excavation to 9-10 ft bgs. Excavated laterally until no contaminated soil encountered. 354 tons of soil removed from site. Soil results show no VOC exceedences in endpoint samples, only PAH exceedences in one soil sample, SB-2. Ground water sample collected from bottom of excavation show 3.9 ppb benzene and 18 ppb MTBE. Building construction will include 20 mL high polypropylene vapor barrier. Request NFA based on low concentrations and vapor barrier. Call Chris and leave message. Sent email approving building construction. Need to discuss closure. 11/3/05 - Obligado - Call Chris De Carlo (212) 675-3225, left message

BROWNFIELDS:

Program: BCP
Site Code: 479327

**Actual:
13 ft.**

Site Description: Location: The site is located in an urban area in East Williamsburg, Brooklyn and occupies Tax Block 2245 Lot 8. Site Features: The site is currently vacant. The site was previously occupied by a vacant one-story brick building with a paved parking lot. The building has been demolished but the foundation slab remains. Current Zoning and Land Use: The site is zoned R7A for residential use, with a C2-2 commercial overlay. The site is surrounded by commercial uses to the south and east, and by residential uses across Marcy Avenue to the west and across Lorimer Avenue to the north. Past Use of the Site: The site was developed prior to 1887 with 12 two-story residential homes. By 1935, the home on the corner of Marcy Ave. and Lorimer St. was replaced with a storefront. The other lots fronting on Lorimer St. contained a commercial building used for truck sales and service. The Charles Pfizer and Co. facility occupied the property from 1965 to 1987. From 1989 to 2007, a warehouse was operated on the site. These uses contributed to the petroleum contamination found at the site. Site Geology and Hydrogeology: Subsurface soils at the Site consist of a silty urban fill material mixed with bricks, coal ash, and other debris to approximately 5 ft below grade (bg). A native brown to grey silty-clay is present below the fill material to a depth of at least 12 ft bg. Bedrock in this area of Brooklyn is approximately 100 ft bg. Groundwater is present at a depth of approximately 10 ft bg and flows to the west-northwest toward Wallabout Channel.

Env Problem: Nature and Extent of Contamination: Soil: Based on the investigations conducted to date, the primary contaminants of concern detected in soil include SVOCs and metals. The contamination at the site was determined to be in the fill layer and beneath it to a depth of approximately 15 feet below grade over the entire site. Soil in two soil borings was contaminated with petroleum. Numerous SVOC

concentrations in soil in three of six soil borings exceeds the Unrestricted Use Soil Cleanup Objective (UUSCOs) as well as the Restricted Residential SCOs (RRSCOs), including: benzo(a)anthracene at a maximum concentration of 630ppm (RRSCO is 1 ppm), benzo(a)pyrene up to 440 ppm (RRSCO is 1 ppm, benzo(b)fluoranthene up to 500 ppm (RRSCO is 1 ppm), benzo(k)fluoranthene up to 130 ppm (RRSCO is 3.9 ppm), chrysene up to 640 ppm (RRSCO is 3.9 ppm), fluoranthene up to 1,200 ppm (RRSCO is 100 ppm), indeno(1,2,3-cd)pyrene up to 180ppm (RRSCO is 0.5 ppm), phenanthrene up to 1,800 ppm (RRSCO is 100 ppm), and pyrene up to 1,400 ppm (RRSCO is 100 ppm). Metals were detected in two soil samples at concentrations exceeding both the UUSCOs and the RRSCOs, as follows: cadmium up to 7.73 ppm (RRSCO is 2.5 ppm), lead up to 1,060ppm (RRSCO is 400 ppm), and mercury up to 2.78 ppm (RRSCO is 0.81 ppm), and zinc 2,550ppm (RRSCO is 109 ppm). Groundwater: VOCs and SVOCs were the primary contaminants found in groundwater. Cis 1,2 dichloroethene (DCE) was identified at a maximum concentration of 99 ppb (compared to groundwater quality standard of 5 ppb), 1,1,1- trichloroethane (TCA) 140 ppb (compared with groundwater quality standard of 5 ppb), and naphthalene was detected at up to 95 ppb (compared to groundwater quality standard of 10 ppb). The chlorinated solvents detected in groundwater are from a suspected upgradient source. Soil Vapor: In soil vapor, TCA was detected at a concentration of up to 32,000 micrograms per cubic meter. The chlorinated solvents detected in soil vapor are from a suspected upgradient source.

Health Problem: Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with a building foundation and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Because there is no on-site building, inhalation of site contaminants in indoor air due to soil vapor intrusion does not represent a concern for the site in its current condition. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development.

J.Kann. This spill transferred to J.Kann. Consolidated with 9611167 (closed) and 9614725 (closed). Spill 9611167 indicates "07/28/06: NYCHA update summary states that two 35K USTs installed in 1982 and stored #4 and #6 oil were closed-removed in 2001. A 2K Diesel tank installed in 1982 was closed-removed in 2001. In 1999, a 20K UST was installed. In 1996, a 4K AST was installed. Both were disconnected in 2001. In 2001, two 25 USTs that store #2 oil and one 2K diesel tank were installed and are currently in service. No recovery system and no MWS on site. NYCHA recommends that DEC review the available site assessment."3/10/11: J.Kann - Investigative work plan submitted on 3/3/11.5/29/12: J.kann - priority p0 assigned to the site
LEAK RATE OF 0.08 GPH REPORTED AS PASSED BY TESTER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

contamination, however, additional soil sampling by URS failed to duplicate those results and only contaminant in groundwater was MTBE, which seemed likely to be coming from upgradient 90th Precinct. In March 2005, J. Kolleeny approved NFA for the soil at site (and monitoring of groundwater combined with 90th Pct. monitoring), but cautioned that if there were indications that on-site soil contamination was impacting groundwater, additional investigation and/or remediation could be required. In November 2004 URS Groundwater Monitoring report for 90th Precinct and Engine Co. 216, MTBE levels in Eng. Co. 216 wells seem persistent and possibly unrelated to 90th Precinct plume. JK spoke with Jane Staten of URS and agreed that if next round of GW sampling still showed high MTBE levels, situation at Eng. Co. 216 would be re-evaluated. Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006. MW-3 - 150 PPB mtbe in groundwater. Recommendations: maintain DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb (July 2006). Benzene and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX). AZ10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: "I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil sampling and analyses in areas of residual groundwater contamination (i.e. 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report." AZ4-25-2011 Reviewed LiRo status report. This spill is associated with four closed in place 550 gallon gasoline USTs. Two soil borings will be installed near these USTs. AZ11-28-2011 A report dated 9-8-2011

Remarks: stated that drilling for the borings approved by DEC was scheduled for August 2011. AZ6-12-2012 Reviewed a status report dated 3-29-2012. ORC socks were placed in contaminated wells. AZ4-12-2012 Reviewed a status report dated 8-31-2012. Semi-annual sampling is being performed at 12 wells. Downgradient well MW-2 exhibited continued rise in contaminant levels. Left a message for S. Frank. He called back and we discussed the site. He will into it. Maybe LiRo will install a well downgradient of 216-MW-2 AZ

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHITOMIRSKY" The spill is referred to spill # 8809462. The site is currently under remediation by LiRo Engineers. - II (03/02/05). 4/28/05- Reviewed the monthly monitoring report-Jan/05. A multi-phase extraction system is in place and is performing well. Both vapor and water effluent are under compliance. A trace (.01 ft) of free product persists at one well only as revealed from monthly monitoring data. Quarterly groundwater sampling results show persistently decreasing trend and are close to under compliance. Soil sampling is done semiannually. Routine site monitoring to continue. 3 monthly electronic files have been installed in the eDoc Folder.- II6/6/05- Reviewed Feb/05 & Mar/05 monthly monitoring reports. The MPE system monitoring data shows that it is working effectively. Neither of the scheduled Quarterly GW sampling nor Semi-annual soil sampling were done during the monitoring period as they were not due in this period. All monitoring wells have become free from Free Product. Routine monitoring to continue as scheduled.- II7/22/05- Reviewed the Monthly Monitoring Report prepared by LiRo Engineers dated May 27, 2005. The report presents MPE system performance monitoring data for the month of April, 2004. The system monitoring data indicate that vacuum measurements were not taken at two monitoring wells and six (50%) extraction wells. This lack of readings prevents DEC from properly evaluating the system's effectiveness. Sent the above comment to DDC and LiRo via email. Installed the monthly monitoring reports for Feb., Mar. & Apr./05 in the eDoc Folder. - II8/23/05- Reviewed the May/05 monitoring report. The report presents MPE system operating data and GW sampling results for the month of May/05. Apprx. 0.3 lbs VOC was collected and the MPE system is functioning effectively. Monthly GW sampling could not be done on wells EW-6 & MW-8 due to deposits lining the inside of the drop tube and well EW-1 & MW-13 for being under water. Over all, the GW contamination has reduced substantially and four of the wells

BROOKLYN NORTH 03/03A DOS -DDC (Continued)

S104621574

sampled in May/05 still exceed NYSDEC quality criteria for one or more compounds. Routine monitoring will continue.- II.9/19/05- Reviewed the June & July/05 monthly monitoring reports. MPE system is operating effectively. Approx. 2.8 lb VOC was collected during July month which is very high compared to the June month. LiRo did not explain the reason. Quarterly GW sampling was not due during the monitoring period. Routine system monitoring will continue. - II.10/25/05- Reviewed the August/05 monitoring report. The MPE system collected about 0.5 lb VOC during the month and the last month's spike (2.8 lb) is said to be an anomaly. Overall GW contamination at most wells has been significantly reduced. Low level Product has appeared in two wells and they have been sampled for fingerprint analysis. Of the four wells sampled, two wells were non-detect for STARS list compounds. Other two wells showed a very slight increase in TVOC contamination. However, routine monitoring will continue.- II11/18/05- Reviewed the Sept. & Oct/05 monthly monitoring reports. Product appearance in wells LW-1 & MW-1 have been found to be mineral spirit and hydraulic oil respectively by fingerprint analysis. In Sept. & Oct/05 the MPE system collected 4.2 lbs and 2.4 lbs of VOCs respectively. LiRo states this increase in influent VOC levels during the period due to system cleaning and drop tube adjustments which the contractor Franklin conducted during this period. GW sampling was not due during this two months of monitoring period. LiRo recommends to continue operation of the MPE system with improved induced vacuum. LiRo also recommends installation of passive skimmers in two wells having product. LiRo's recommendation for passive skimmers installation and plan for next round of annual soil sampling four borings) are approved with an additional boring to be located in the vicinity of GPR-13. Filed the monthly reports in the eDoc folder.- II01/31/06: This spill transferred from Imdad to Q.Abidi.Reviewed November/05 monthly monitoring report. Quarterly groundwater sampling was not performed during this monitoring period. On Dec.6, 2005 Liro pumped out wells LW-1 and MW-1 with a vacuum truck, removing 1,412 gallons of contaminated fluids, of which an estimated 14 gallons was free product. Liro recommends to continue the system operation. No response letter necessary.- QA02/07/06: Reviewed December/05 Monthly monitoring report. Quarterly groundwater sampling was not performed during the monitoring period. LiRo recommends that the vacuum truck should return to the site to treat wells LW-1 and MW-1. Site is being transferred to Greyhawk. Data show decrease in induced vacuum levels, possibly indicating a line blockage.Liro suggest New CM should evaluate the site and determine whether system should be cleaned, or shut down and only use a vacuum truck on LW-1 and MW-1. Filed the monthly report in the eDoc folder.- QA08/18/06: Transferred to S.Kraszewski. According to URS Bi-monthly update report Rouc performed GW sampling and gauging on April 5, 2006. VOCs detected range from 6 ppb to 532 ppb. SVOCs were below detection. Monthly gauging on May 5, 2006 revealed 0.22 ft of product in LW-02 and 0.01 ft in LW-01. On June 15, 2006 no free product in LW-02 and 0.01 ft of product in LW-01. An absorbent sock was placed in LW-01. - SK08/31/06: Reviewed Quarterly O&M and Monitoring Report for April-June 2006 submitted on July 7, 2006 by Greyhawk/Roux. On April 5, 2006 Roux gauged and monitoring wells EW-1, EW-4, EW-6, EW-9, LW-1 and LW-2. Gauging occurred on May 5 and June 15 as well. GW flow direct was determined to be southerly. No free product in April, but 0.01 ft for LW-1 and 0.22 ft for LW-2 in May. In June, LW-1 had 0.01 ft. All six MWs revealed VOCs ranging from 6 ppb to 532 ppb with

BROOKLYN NORTH 03/03A DOS -DDC (Continued)

S104621574

several TAGM exceedances. No SVOCs detected in GW. Greyhawk plans on continuing quarterly GW sampling but recommends reducing the gauging and free product removal frequency from monthly to quarterly visits. Low PID readings for influent and effluent air. However, influent air TVOCs reveal 3250 ug/m³ in April and 877 ug/m³ in June. Since the system is still effectively removing volatiles Greyhawk recommends continued operation and maintenance of the MPE system. They will attempt to increase the vacuum in EW-3 and EW-12. SK called Andris Ledins at Greyhawk (718-943-1100.) Left a message to call back. - SK10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. - JAM5/31/07 Reviewed Quarterly Monitoring Report for July through September 2006 submitted by Roux and dated Nov. 10, 2006. Free phase product was detected in wells LW-02 (0.01 foot) and product sheen detected in EW-06 on July 20, 2006. During the previous quarterly monitoring period (April through June 2006), free product was detected in well LW-01 (0.01 ft) and LW-02 (0.22 ft). Groundwater samples were collected from wells on the quarterly schedule (more wells are sampled on an annual schedule at this site) and the highest level of TVOCs was 693ug/L in LW-01. The MPE system continues to run however restricted vacuum readings have been observed in multiple monitoring wells and ventilation wells. 6/11/07 Reviewed Quarterly Monitoring Report for October Through December 2006 submitted by Roux and dated March 15, 2007. Free-phase product was detected in wells LW-02 (0.10 ft) and EW-06/MW-08 (0.15 ft) and product sheen was observed in LW-01 during the October gauging event. Wells EW-06/MW-08 was not gauged in December because of a DOS truck was obstructing and LW-01 and LW-02 had petroleum absorbent socks which were removed. Groundwater samples were collected from wells on the quarterly schedule and the highest level of TVOCs was 261ug/L in LW-01. The MPE system has had an uptime of approximately 80 percent during this monitoring period. However, the system has been hampered by the decreased inlet header vacuum, which resulted in the system's inability to extract groundwater and expose the smear zone. Attached in the appendices were an Enhanced Bioremediation Work Plan and Additional Site Investigation Work Plan. The Enhanced Bioremediation Work Plan proposed injecting a bacteria/enzyme mixture at wells LW-01, LW-02 and MW-16. These wells would be monitored to evaluate the effectiveness of the injection. I requested that EW-07/MW-09 be included in the monitoring program and approved the work plan. The Additional Site Investigation Work Plan proposed the advancement of seven soil borings in locations as shown in Figure 8. I requested that the new borings be advanced as close as possible to the original soil samples collected at the beginning of the site investigation and approved the work plan. Additional recommendations to the O&M Procedures are as follows: 1) Convert MPE system to SVE system 2) Reduce frequency of the quarterly groundwater monitoring program to semi-annual 3) Reduce frequency of gauging from monthly to quarterly 4) Remove SVOCs from the groundwater sampling program 5) Remove wells EW-05, MW-12 and MW-15 from the groundwater sampling program. Recommendations 1, 3, 4, and 5 were approved. Since a new remedy is being implemented at the site groundwater monitoring should continue on a quarterly basis for several more rounds. The reduction of monitoring frequency from quarterly semi-annual will be reevaluated at a later date. A letter was sent today with these approvals and can be found in edocs. - JAM3/3/08 Reviewed Quarterly O&M and Monitoring Report for period January through June 2007 submitted by Roux and dated September 18, 2007. MPE system operated

S104621574

at the site and as currently configured the MPE system is not operating efficiently to remediate residual soil and groundwater. Groundwater samples were collected from select wells in January and April 2007 for VOCs and SVOCs. No SVOCs were detected in any wells and TVOCs were observed ranging from ND to 84ug/L. Roux states the MPE system has effectively reduced levels of free product and residual soil and groundwater contamination. During the next monitoring event Roux will conduct quarterly monitoring, implement the approved bioremediation WP and convert the MPE system to an SVE system. - JAM6/10/08 Spoke to Brian Morrissey at Roux. He said the DOS is terminating their lease and moving from the site. They will maintain liability for the spill. Several tanks on the site will be closed. The In-situ Bioremediation work plan should be implemented soon. The MPE system will also be converted to an SVE system. I have received emails from Envirotrac notifying the DEC that the MPE system has been shut down due to a faulty solenoid valve. The valve will be replaced and the estimated down time is 1 week. - JAM6/23/08 Spill number 0001698 was closed and consolidated with this spill number. Hoist oil was observed in several wells which has been evacuated or removed by petroleum absorbent sock. I added Hoist Oil to the material list on this spill case. I called Brian Morrissey and let him know that spill number 0001698 was closed and consolidated with this spill. - JAM7/28/08 Reviewed Quarterly Monitoring Report for period July 2007 through May 2008 submitted by Roux and dated June 24, 2008. The MPE system operated at the site with an uptime of 81 percent. As configured the MPE system is not operating effectively and needs optimization. Free product was detected in 4 of the on-site monitoring wells with a max thickness of 0.38 feet in well EW-09/MW-03. Product identified as hydraulic oil or heavy lubricating oil. VOCs were detected in several wells with the max detection during the reporting period of 512ug/L in LW-01 in July 2007. Roux advanced six soil borings as per the approved work plan to a depth ranging between 24 to 31 feet. VOCs were detected in 4 of the six borings with a max of 249400ppb in RXSB-02 from interval 19-21 fbs. Roux recommends the following: 1. Continue quarterly groundwater monitoring program. 2. Continue using petroleum absorbent socks in wells LW-01 and LW-02. 3. Conduct a soil investigation (as proposed in Appendix E) near the three UST areas in the south-southwester part of the site. 4. Optimize the MPE system performance. I sent an email today approving these recommendations. A work plan should be submitted in a separate letter for approval that describes the optimization of the current MPE system in more detail. The letter should include a process and instrumentation diagram and a site diagram showing the additional extraction points. The report and email are uploaded to eDocs. - JAM9/12/08 Received an email from Tom Hug at Envirotrac. The MPE system was shut down because the discharge line has become clogged and the system is shutting down on a "high water alarm." As soon as the blockage is cleared the system will be restarted. Estimated downtime is 1 week. - JAM5/12/10 Received an email from Stephen Frank at LiRo and Fatemah Ashkan at the NYCDDC. LiRo proposed a conceptual remedy, which includes excavation and removal of USTs on-site as well as injecting chemical oxidants to treat smear zone and groundwater contamination. I sent a reply email stating that, "The proposed approach is acceptable; however, a remedial action work plan (RAWP) must be submitted to the DEC for approval. The RAWP should include a detailed description of the proposed excavation/tank removal work with figures showing the

S104621574

proposed excavation limits and an end-point soil sampling plan. The RAWP should also include a chemical oxidant injection plan with a detailed description of the chemical oxidant to be used, how the chemical oxidant will be applied and a monitoring plan to evaluate the effectiveness of the remedy." I also notified them that the EPA Underground Injection Control Program needs to be notified and an application must be submitted to perform the chemical oxidant injections. - JAM6/25/10 Reviewed the Proposed Site Pre-Design Investigation Work Plan for the above referenced site submitted by LiRo Engineers, Inc. (LiRo) dated June 16, 2010. The work plan was prepared for the tanks located on the adjacent property at 314 Rutledge Street and proposes advancing nine soil borings and installing two groundwater monitoring wells. The purpose is to locate the three previously abandoned tanks and delineate soil and groundwater contamination, and to determine the limits of the planned soil excavation and design a chemical oxidation injection program, which constitute the remedial strategy approved by the NYSDEC via email on May 12, 2010. The work plan is uploaded to eDocs. I issued a letter today approving this work plan. A summary report including appropriate diagrams, soil boring logs, well construction logs, and tables summarizing soil and groundwater analytical data should be submitted to the NYSDEC for review. A detailed remedial action plan based on the findings of this investigation should also be included for review and approval. Letter uploaded to eDocs. - JAM11-10-2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ2-14-2011 Reviewed revised additional soil and geophysical investigation summary report and remedial action work plan dated 10/13/2010 and received from J. Kolleeny on Dec. 20, 2010. The plan proposed an in-situ chemical oxidation system to treat smear zone and phreatic zone at 314 Rutledge St. Also, the plan proposed excavation of the remaining USTs and excavation of the remaining residual soil contamination and injections of a metal solution, hydrogen peroxide, and a biological treatment at 306 Rutledge Street. An e-e-mail was sent to S. Frank, V. Brevdo and F. Ashkan: "I have reviewed a Revised Soil and Geophysical Summary Report and Remedial Action Work Plan dated October 13, 2010. The Work Plan is approved. The Responsible Party and Contractors are responsible for the safe execution of the Work Plan." AZ8-18-2011 The following e-mail was received from S. Frank (LiRo) on 8/18/2011: "At the Quarterly meeting we discussed Brooklyn 3/3A. As you know, NYCDOS moved out of the leased site several years ago. There is currently litigation over rent payments and site impacts that have been ongoing between the property owners and NYC. To complicate matters, the former DOS site includes two separate properties (306 Rutledge and 314 Rutledge) that are owned by two different parties. Both parties are separately in litigation with the City. The City is committed to remediating both properties, but in the past, all site contamination was being addressed under a common spill number associated with fuel oil releases on the 306 Rutledge property. We have acquired Sanborn Fire Insurance maps that show that the 314 site had historically been used for dry cleaning and the historical mapping shows "solvent tanks" in the portion of the site where the contamination was identified as mineral spirits (see attached Sanborn Map). A mineral spirits derivative was historically used for dry cleaning. The City has inquired if it would be possible to open a separate spill number for the mineral spirits release at the 314 Rutledge Street property. At the meeting, Vadim indicated that NYSDEC would review the site

S104621574

information and advise DDC with regard to opening a new spill for mineral spirits at 314 Rutledge Street. I was wondering if you have had an opportunity to discuss this issue with him." AZ8/22/2011 The following e-mail was sent by S. Frank (LiRo) to Vadim Brevdo and AZ on 8/22/2011: "Dear Mr. Brevdo, I am writing to follow-up on our quarterly meeting conversation regarding the former use of 314 Rutledge Street for Dry Cleaning and the identification of a mineral spirits release. Mr. Alex Zhitomirsky called me to inquire whether chlorinated dry cleaning hydrocarbon compounds (i.e., tetrachloroethene and/or its breakdown products) were present. LiRo tested for full Target Compound List (TCL) volatile organic compounds during our February 2011 groundwater sampling of wells in the area of concern (314 Rutledge and 306 Rutledge at the common wall with 314 Rutledge) and the results are summarized in the attached table. Based on the February 2011 sampling, there is no evidence that chlorinated compounds are present in groundwater and all samples showed a chemical identification of mineral spirits. Thank you for your attention to this matter and do not hesitate to contact me if your office needs additional information." AZ10/26/2011 An e-mail with the information regarding the Owner of "314 Rutledge, LLC. Contact info: c/o Abraham Glanzer, 718 855-9100. Mailing address: Edith Kahan and/or Abraham Glanzer, 170 Hewes St, Brooklyn, NY 11211." AZ10/31/2011 Discussed this site w/V. Brevdo. Contacted S. Frank of LiRo and requested a technical memo which will summarize all information related to a mineral spirits spill. 12-13-2011 Received an email from S. Frank: "Dear Alex, I wanted to update you on the status of remedial work at Brooklyn 3/3A. We are installing injection wells for the ISCO work at both properties (314 Rutledge and 306 Rutledge) as well as removing tanks that were formerly closed in place in the building interior at 306 Rutledge. In conjunction with the tank removal work, we are over-excavating contaminated soil to the extent possible. We are hoping to finish the well installation and tank removal work this week. We expect the ISCO injection work will begin within a couple of weeks after the well installations are completed." AZ2-13-2012 Reviewed and discussed with V. Brevdo a report by LiRo Former DSNY Brooklyn 03/3a Garage Request for spill number for mineral spirits released at 314 Rutledge. The report states that contamination at 314 Rutledge is a different spill and plume from 206 Rutledge. A spill at 306 Rutledge is allegedly caused by mineral spirits. According to the report, this site was a dry cleaning operation between 1947 and 1965. The Sanborn maps indicate the presence of solvent tanks located along eastern wall of 314 Rutledge which is adjacent to the 306 Rutledge Street property. Petroleum based mineral spirits (Stoddard solvent was historically used in dry cleaning operations. Soil and groundwater investigation completed by EBC (contractor working for 314 Rutledge owner) at 314 Rutledge in 2008 indicated petroleum related VOC in soil and groundwater. EBC recommended the DEC Hotline be notified, however, it was not done. Free phase product fingerprint analysis for the sample from MW-18 (located at 314 Rutledge) identified the product as mineral spirits. Routine groundwater sampling completed in February 2011 from 314 Rutledge wells MW-17 and MW-18 indicated petroleum identification as mineral spirits. DSNY records indicate that petroleum fuel storage and fueling operations were never conducted by DSNY at the 314 Rutledge parcel. However, PBS records indicate that there are three 1,500 gal tanks closed and registered by DSNY in 2000. Product stored indicated as gasoline. This discrepancy must be resolved. S. Frank

S104621574

indicated that these tanks were filled with concrete and will be excavated by LiRo. I requested to attempt fingerprinting any remaining product or sludge in the tanks in question. Also, the tanks design should be described. The Sanitation is leasing this site from 1993. LiRo should submit tank inspection results. LiRo should submit any information supporting statement that DSNY did not use 314 Rutledge for fueling or storage. LiRo should include fingerprint analysis of the alleged mineral spirits. The site was discussed with J. Urda. It was decided that V. Brevdo will contact A. Samani and request a conference call with a City lawyer AZ10-3-2012 LiRo issued a report in August 2011, stating that Empire Environmental conducted the tank removal and remedial soil excavation work at 306 Rutledge from December 2011 to January 2012. The report was uploaded to e-docs. AZ10-4-2012 According to LiRo's report dated January 8, 2012, tanks 009, 010 and 011 are 1,500-gallon gasoline USTs which were closed in place at 314 Rutledge in 2000. These tanks were registered as gasoline tqanks. However, according to DSNY records, petroleum fuel was not stored and petroleum fuel operations were not conducted at the 314 Rutledge parcel. The results of geophysical investigation did not indicate the presence of USTs beneath the site. In October 2010, free phase product was observed in 314 Rutledge St. well MW-18. Fingerprint analysis identified the product as mineral spirits. Soil and groundwater contamination are present at 314 Rutledge. However, in the report dated August 8, 2012, LiRo stated that they located and removed previously closed in place mineral spirits tanks at 314 Rutledge Street parcel. A report for the 314 Rutledge Street tank removal will be submitted to DEC under separate cover. Discussed the site with V. Brevdo. AZ1-2-2013 Reviewed LiRo's report dated August 8, 2012. According to the report, Spill#9200212 was opened in in 1992 due to the release of gasoline and hoist oil in the southern portion of the 306 Rutledge parcel of the site. Underground storage tanks (USTs) and aboveground storage tanks (ASTs) used by DSNY for storing gasoline and hoist oil include three 550-gallon USTs (Tanks 012, 013, and 0140, one hoist oil UST and one hoist oil AST). Multi-phase extraction system was made operational in 2002 and shut down in 2008 because of operational issues. The proposed remedial plan included soil/UST excavation to address spill#92002112 in the 306 Rutledge portion of the site. In addition, the plan proposed chemical oxidation to treat mineral spirits contamination supposedly coming from the historic dry cleaning operation at 314 Rutledge. 1-11-2013 A CSL was sent to C/O GLanzer 170 Hewes Street, Brooklyn, NY 11211. Copies were sent to J. Urda/V. Brevdo. AZ

Remarks:

U.G. TANK INSIDE BLDG, NOT USED FOR 10 YEARS. EXCAV. FOR NEW FLOOR, DISCOVERED CONTAMINATED SOIL. SHOULD BE CHECKED ASAP, PLAN TO POUR NEW FLOOR SOON.

DEC Memo:

3/27/07 bf: Spoke with Matt of Associated Environmental (631)234-4273. Epoxy patch from previous repair at top of tank was problem. Tank is AST. They plan on having the tank cleaned out, inspected, remove epoxy, and weld a steel patch to tank. Then tank will be tightness tested. They plan on starting work next week. One problem is getting a tanker to be dedicated to the building while the repairs are made. Petroleum Tank Cleaners will be doing repairs and testing in conjunction with Associated. Sent ttf letter to:David Rochlitz544 Park AvenueBrooklyn, NY 112057/13/07 On 7/12/07, received call from Antionette Ollivierre of American Environmental Associates and Solutions (718)209-0653. She requested a call back. Called her back today. I faxed her a copy of the ttf letter dated 3/27/07. fax:(718)622-5807. bf9/20/07 Received call from Aron Weinstein tesla Environmental 732-904-4618. Called him back at 2:45 PM. He will send email letting me know where project stands. Tank is encased in concrete and there may be structural concerns regarding the building. A Phase II was done on the property and eight borings were done. I told him I need to see those. I asked him why the tank failed and he could not answer except that the Horner EZ 3 should not be allowed. He was on a cell phone and was hard to hear. bf11/13/07 On 11/8/07, received call from Donna of ABC Tank. Ph.(718)272-2800 Fax.(718)272-3147. She requested any paperwork regarding the spill. I sent her the ttf letter and the spill report. Called her back, but she is not in until Thursday. bf3/4/08 Site inspected on 2/29/08. NOV issued. Received call to day from John of Gianco (contractor doing tank test/repair). I faxed ttf letter to him. Fax: (631)952-5975. bf4/2/08 Signed order hand-delivered with check for \$1100 panalty. bf4/30/08 Received faxed letter on 4/9/08 from John Sinatra of Gianco, dated 4/8/08, to Robert Hoffman. Tank passed pressure test over the weekend holding 7 pounds of air. No contamination was found on, near, or surrounding the tank. It is his belief that the tank can be out online as a backup.6/19/08 Called Robert Hoffman requesting tank test report. He faxed letter to close spill, not report. Sent tt return letter to him since document is not a tank test report. bf7/1/08 Received passing test report on 6/30/08. NFA. bf

Remarks: CONTACT IS FROM COMPANY THAT HIRED CALLER TO PERFORM TANK TEST: MATT FROM ASSOCIATED ENVIRONMENTAL

RESPONSE FROM ANSWERING MACHINE. DISCUSSED SPILL WITH STEVE, WHO SUGGESTS THAT I TALKED TO JON KOLLEENY.I DISCUSSED WITH JON, WHO WAS WILLING TO TAKE OVER THE INVESTIGATION & MONITOR ANY FURTHER DEVELOPEMENT. - E.R.Franklin Co. excavated some contaminated soil but had to return some soil to the pit to stabilize edge of pit under sidewalk adjacent to precinct. Franklin took end point samples and did some follow-up Geoprobe borings. Found only minor impacts to vadose zone soil, and gasoline-related impacts at water table. Site is being remediated by URS under DDC Consent Order. OK to close this spill; see open spill for this site, no. 9512590.- J. Kolleeny 4/4/05.

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KOLLEENY"URS investigated site, operated dual-phase extraction system to address free product, soil and groundwater contamination. System operation was terminated in 2002 due to diminishing results. To address remaining groundwater contamination they applied ORC. Groundwater monitoring still ongoing. - JK 4/4/05Spill transferred from Kolleeny to A. Zhitomirsky on 4/4/05. - JK10/31/2005 Reviewed report dated September 2005. MTBE is at 230 ppb. AZ8-14-2006 Reviewed monitoring report by Roux dated July 28, 2005 for March through June 2006.MW-3 - 150 PPB mtbe in groundwater.Recommendations: maintainn DPE and Oxygen delivery remediation systems shut down; continue gw monitoring, discontinue SVOCs analyses, evaluate alternative technologies. AZ04-5-2007 Reviewed Monitoring Reports submitted in November 2006 for July through September 2006 and on March 23, 2007, for October through December 2006. Residual MTBE contamination was detected in four wells with concentrations up to 60 ppb(July 2006). Benzine and naphthalene were encountered in one well. DPE was inactive. ORC injections and ORC socks were discontinued. In October 2006 sampling event MTBE ranged from 16 ppb to 136 ppb. Some increase of MTBE concentrations was observed. ORC socks will be installed in MW 216-MW-01, 216-MW-03 and MW-09. Recommended maintaining shutdown status of DPE system, reducing monitoring and reporting to semi-annual. These recommendations were approved. An e-mail was sent to Brian Morrissey (ROUX): I have reviewed Monitoring Report for October- December 2006 dated March 15, 2007. The report recommended reducing monitoring and reporting frequency to semi-annual. ORC socks should be placed in wells where VOC concentrations exceed NYSDEC Guidance Values. AZ10-22-2007 Reviewed Monitoring Reports submitted in August 2007 for January through June 2007. Residual MTBE contamination was detected in five wells wells with concentrations up to 85 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. Roux recommended continuing semi-annual groundwater monitoring program. AZ 7-2-2008 Reviewed Monitoring Reports submitted in April 2008 for July through December 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 56 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux recommended continuing semi-annual groundwater monitoring program. AZ2-13-2009 Reviewed Monitoring Reports submitted in October 2009 for January through September 2008. Residual MTBE contamination was detected in four wells of the six wells with concentrations up to 66 ppb. ORC socks were reinstalled in three monitoring wells at the NYSDEC request. MTBE is the only VOC detected at a concentration greater than its NYSDEC AWQSGV in multiple wells. Roux will conduct a site wide groundwater sampling round in preparation for NFA. AZ11-6-09 An e-mail was sent to Brian Morrissey/Fatemeh Ashkan/ V. Brevdo: "I have reviewed a semi-annual report for the above site dated May 22, 2009 add covering the period of June 2008 through March 2009. Roux proposed conducting soil

sampling and analyses in areas of residual groundwater contamination (i.e.e 216-MW-02 and MW-08) in order to determine current status of soil impacts. Also, you proposed considering enhanced bioremediation for this site. These proposals are approved and should the work plan should be included in the next monitoring report." AZ3-29-2011 Reviewed 4,000 gal gasoline tank closure report.3 bottom samples were collected at depth 13 to 16 bgs. Sidewalls samples could not be collected due to the steel sheeting that was previously installed during the original tank installation. Groundwater sample was collected from approximately 13 ft bgs. No visual evidence of contamination was detected. PID readings 0.6 - 2.1 ppm. The tank was in good condition. 456.4 tons of soil was transported for offsite disposal. No VOCs or SVOCs were detected in the soil samples. Groundwater sample contained VOCs detected above NYSDEC TOGs total VOCS 438 ppb. AZ4-27-2011 An e-mail was sent to LiRo/DDC/V. Brevdo: "I have reviewed the Site Turnover Status Report and Semi-Annual Monitoring Report dated January 24, 2011. I concur with the LiRo's recommendations to install two wells near a former 4,000 gal gasoline UST. Since the groundwater contamination was discovered when this UST was removed, two additional wells are required near this tank (a total of four wells).Well MW-01 could be removed from the monitoring schedule, as per LiRo's recommendation. Additional soil borings are approved. There is a number of USTs, including gasoline tanks, closed in place at this site. I recommend that these tanks be removed, if feasible." AZ11-27-2011 Reviewed report dated Aug. 29, 2011. The report stated that the latest groundwater results show VOCs were detected above AWQSGVs in four wells. LiRo will ORC socks and continue semi-annual monitoring. AZ6-11-2012 Additional soil borings SB-01 through SB-04 will be installed. New monitoring wells LMW-01 through LMW-04 will installed in the second quarter of 2012. AZ4-15-2013 ORC socks are installed in MW-02 and MW-08. AZ LABORATORY RESULTS SHOW SOIL CONTAMINATION

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/09/2013	Telephone: N/A
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 07/12/2013
Number of Days to Update: 62	Next Scheduled EDR Contact: 10/21/2013
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013	Source: EPA
Date Data Arrived at EDR: 05/29/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 08/19/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/22/2013	Telephone: 518-402-9622
Date Made Active in Reports: 09/12/2013	Last EDR Contact: 08/22/2013
Number of Days to Update: 21	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 01/01/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 02/20/2013	Telephone: 518-402-9814
Date Made Active in Reports: 03/15/2013	Last EDR Contact: 08/23/2013
Number of Days to Update: 23	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Varies

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 07/08/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 07/10/2013	Telephone: 518-457-2051

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 08/19/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 08/22/2013	Telephone: 518-402-9549
Date Made Active in Reports: 09/11/2013	Last EDR Contact: 08/22/2013
Number of Days to Update: 20	Next Scheduled EDR Contact: 12/02/2013
	Data Release Frequency: Varies

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

UTM Y (Meters):	4505822.0
Elevation:	14 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40073-F8 BROOKLYN, NY
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

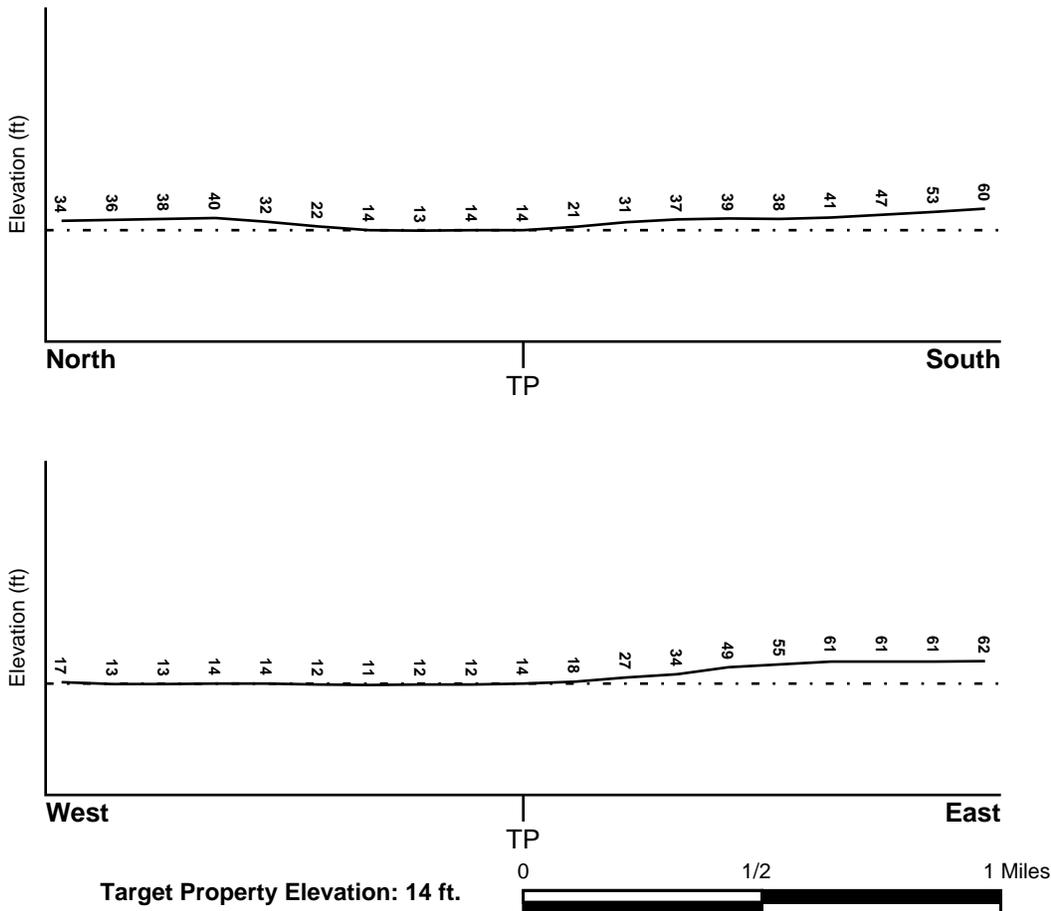

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood <u>Electronic Data</u>
KINGS, NY	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	360497 - FEMA DFIRM Flood data
Additional Panels in search area:	3604970055B - FEMA Q3 Flood data 3604970056B - FEMA Q3 Flood data 3604970063B - FEMA Q3 Flood data 3604970064B - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic <u>Data Coverage</u>
BROOKLYN	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1 - 2 Miles West
Site Name:	Naval Station Ny
Site EPA ID Number:	NY5170022250
Groundwater Flow Direction:	NOT AVAILABLE.
Measured Depth to Water:	14 feet in a well located 1 mile southeast of the site.
Hydraulic Connection:	Information is not available about the hydraulic connection between the surficial aquifer (upper glacial till) and underlying aquifer(s). Bedrock is present at an estimated depth of 100 feet.
Sole Source Aquifer:	A sole source aquifer is present at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Re: **5-11 Whipple Street, Brooklyn, NY**
Block 2272 Lots 45, 46 and 147

Dear Mr. Dushinsky:

Environmental Business Consultants (EBC) performed a Limited Phase II subsurface investigation at the above referenced property on May 29, 2013 to assess the environmental condition of the property.

Property Description

The street address for the Site is 5-11 Whipple Street, Brooklyn, New York 11206. The Site is identified as Block 2272, Lots 45, 46 and 147 on the Borough of Brooklyn Tax Map (Kings County). The lots are located on the north side of Whipple Street and the intersection of Whipple Street and Flushing Avenue. Lot 45 has 25 feet of frontage on Whipple Street and Lots 46 and 147 have 37.5 feet of frontage on Whipple Street, and all three lots are 100 feet deep. The total area for the Site is approximately 10,000 ft² (0.23 acres).

Lots 45, 46 and 147 are currently undeveloped and are being used for vehicle parking.

Phase I Environmental Site Assessment

A Phase I Environmental Site Assessment (ESA) was completed by Environmental Business Consultants (EBC) in September 2013. Based upon this report, all three lots were originally developed with mixed use residential and commercial buildings in the late 1880's. Lots 45 and 46 have been vacant since 1977 and Lot 147 has been vacant since 1981.

All three lots have been assigned an E-designation (E-238) as part of the Broadway Triangle Re-zoning Area. A review of the Final Environmental Impact Statement (FEIS) (No. 09HPD019K) prepared as part of the Broadway Triangle Re-zoning project, indicates the following E-designations by Lot:

- Lot 45: designated as "E" Hazardous Materials/Air/Noise
- Lot 46: designated as "E" Hazardous Materials/Air/Noise
- Lot 147: designated as "E" Hazardous Materials/Air/Noise

Historic fill is likely to be present at depths as great as 10-12 feet below grade in the front portions of the lots based upon historic use of the properties and likelihood of the presence of historic cellars.

No other environmental concerns were identified as a result of the Phase I ESA. No registered underground/above ground tanks are associated with these properties.

Phase II Environmental Investigation

Soil Sampling

Six soil boring locations (B1 through B5 and B7) were selected as shown on **Figure 1** to gain representative soil quality information from across the site.

All borings were advanced with Geoprobe™ direct push equipment and sampled with a 5 foot macro core sampler using disposable acetate liners. Soil was characterized by a Qualified Environmental Professional (QEP) and field screened for the presence of volatile organic compounds (VOCs) using a photo-ionization detector (PID).

At each of the soil boring locations, soil samples were collected continuously from grade to a depth of 15 feet below grade. Retrieved sample cores were field screened for the presence of VOCs with a photo-ionization detector (PID) and visually inspected for evidence of contamination. Soil was characterized as fill materials in the top 0-5 feet followed by silty sands and sandy clays to the termination depth. Soil boring logs are attached in **Appendix A**.

A minimum of two soil samples were retained from the six boring locations, one surface sample representing the 0-2 foot interval and one sample at the interval(s) in which physical evidence of contamination or an elevated PID reading was observed. In the absence of such evidence samples were retained from interval representing the groundwater interface.

Groundwater Sampling

Four groundwater samples were collected as shown on **Figure 1** to gain representative groundwater quality information from across the site. Polyethylene tubing fitted with a stainless steel check valve was used to purge and collect groundwater samples from borings B1 through B4. Sample tubing was replaced between each sample location. Groundwater was encountered at approximately 10 feet below grade.

Sample Handling and Analysis

Collected samples were appropriately packaged, placed in coolers and shipped via laboratory dispatched courier for delivery to Phoenix Environmental Laboratories (Phoenix) of 587 East Middle Turnpike, Manchester, CT 06040, a New York State ELAP certified environmental laboratory (ELAP Certification No. 11301). Select soil samples were analyzed for volatile organic compounds (VOCs) by USEPA method 8260, semi-volatile organic Compounds (SVOCs) by USEPA method 8270 (CP-51 List), RCRA Metals and TCLP Lead. Groundwater samples were analyzed for VOCs by USEPA Method 8260.

Results

Soil sample results were compared to the Unrestricted Use and Restricted Residential Use Soil Cleanup Objectives (SCOs) as presented in NYSDEC CP51 Soil Cleanup Guidance (10/21/10). Groundwater results were compared to the New York State 6NYCRR Part 703.5 Class GA groundwater standards. Analytical data for the soil samples are summarized in **Tables 1** through **4**, and a copy of the laboratory analytical report is included in **Appendix B**.

As presented in **Table 1**, only one VOC was detected within one of the 14 soil samples retained. Acetone was detected slightly above Unrestricted Use SCOs in sample B7 (10-12ft). No other VOCs were detected.

As presented in **Tables 2** and **3**, 4 SVOCs were detected above NYSDEC Restricted Residential Use SCOs in 4 of the 6 shallow soil samples and 1 deep sample. SVOC exceedences included benz(a)anthracene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. The metals barium, lead and mercury were detected in shallow soil above Restricted Residential SCOs in all 6 shallow

ENVIRONMENTAL BUSINESS CONSULTANTS

samples. Overall, these findings are consistent with observations for shallow historic fill sites in areas throughout NYC.

As presented in **Table 4**, only one VOC was detected within one of the four groundwater samples obtained. Methyl t-butyl ether (MTBE) was detected above NYSDEC groundwater standards in MW2, at a concentration of 34 µg/L. No other VOCs were detected. As MTBE was not detected in any soil samples collected from the Site, and the sample was obtained adjacent to the southern property boundary, this is indicative of an off-site source of contamination.

Please call if you have any questions or would like to discuss the project further.

Very truly yours,
Environmental Business Consultants

Kristen DiScenza

FAX 631.924.2870

Thursday, June 13, 2013

Attn: Mr. Charles B. Sosik, P.G.
Environmental Business Consultants
1808 Middle Country Rd
Ridge NY 11961-2406

Project ID: 3-11 WHIPPLE ST
Sample ID#s: BD85032 - BD85053

This laboratory is in compliance with the NELAC requirements of procedures used except where indicated.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in black ink that reads "Phyllis Shiller". The signature is written in a cursive style.

Phyllis Shiller
Laboratory Director

SDG Comments

June 13, 2013

SDG I.D.: GBD85032

8270 Analysis:

Some extracts required dilution due to the large presence of non-target hydrocarbon material, not all requested reporting levels could be achieved.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatle analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

BRL=Below Reporting Level

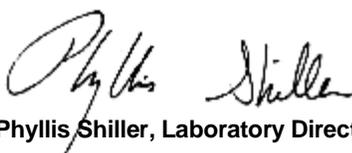

Comments:

Per 1.4.6 of EPA method 8270D, 1,2-Diphenylhydrazine is unstable and readily converts to Azobenzene. Azobenzene is used for the calibration of 1,2-Diphenylhydrazine.

* Due to a matrix interference and/or the presence of a large amount of non-target material in the sample, an elevated RL was reported for the semivolatle analysis.

All soils, solids and sludges are reported on a dry weight basis unless otherwise noted in the sample comments.

If there are any questions regarding this data, please call Phoenix Client Services at extension 200.

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

Health & Safety Plan

PHASE II INVESTIGATION

7 Whipple Street
Brooklyn, NY 11206
Block 2272; Lots 45, 46, 147

1.0 INTRODUCTION

This Health and Safety Plan ("HASP") is developed for utilization during implementation of the Phase II Investigation (Phase II) at the above referenced site located in 7 Whipple Street in Brooklyn, New York (the Site). The HASP is to be enforced by CA RICH's Project Health and Safety Manager and the on-site Health & Safety Coordinator (HSC) or his/her designee. The on-site HSC will interface with the Project Manager and is vested with the authority to make field decisions including the termination of on-site activities if an imminent health and safety hazard, condition or related concern arises. Information and protocol in the HASP is applicable to all on-site personnel who will be entering the designated work zone.

2.0 POTENTIAL HAZARDS

2.1 Chemical Hazards

CA RICH is currently unaware of any chemical hazards on-site. Soil samples were recently collected from the Site. Low levels of Volatile Organic Compounds (VOCs) were identified below Restricted Residential Soil Cleanup Objectives (SCOs). Low levels of Semi Volatile Organic Compounds (SVOCs) and metals were identified. A few SVOCs and metals were detected above Restricted Residential SCOs. CA RICH will operate as if there is a potential for VOCs, SVOCs, and metals contamination on-site.

VOC and SVOCs are typically described as "sweet" or "aromatic" smelling and are narcotic in high concentrations. Acute exposure to significant concentrations of these chemicals can cause irritation of the skin, eyes and mucus membrane, headache, dizziness, nausea, and in high enough concentrations, loss of consciousness and death (*Sax, 1984*). These compounds are suspected to be carcinogenic with chronic exposure.

Physical properties and additional toxicological information for potential contaminants are included in Appendix A.

2.2 Other Health & Safety Risks

Normal physical hazards associated with using drilling and excavation equipment and hand tools as well as hazards associated with adverse climatic conditions (heat & cold) or physical site-related debris represent a certain degree of risk to be assumed by on-site personnel.

Certain provisions in this Plan, specifically the use of personnel protective equipment, may tend to increase the risk of physical injury, as well as susceptibility to cold or heat stress. This is primarily due to restrictions in dexterity, hearing, sight, and normal body heat transfer inherent in the use of protective gear.

3.0 RISK MANAGEMENT

3.1 Work / Exclusion Zones

For each proposed investigation activity a work / exclusion zone will be established. Access to this area will be limited to properly trained, properly protected personnel directly involved with investigation. Enforcement of the work / exclusion zone boundaries is the responsibility of the on-site Health & Safety Coordinator or his/her designee.

3.2 Personnel Protection

Health & Safety regulatory personnel have developed different levels of personnel protection to deal with differing degrees of potential risks of exposure to chemical constituents. The levels are designated as **A**, **B**, **C**, and **D** and are ranked according to the amount of personnel protection afforded by each level. Level **A** is the highest level of protection and Level **D** is the lowest level of protection.

The different levels are primarily dependent upon the degree of respiratory protection necessary, in conjunction with appropriate protective clothing. Levels of protection mandate a degree of respiratory protection. However, flexibility exists within the lower levels (B, C, and D) concerning proper protective clothing.

The four levels of protection were developed for utilization in situations which involve suspected or known atmospheric and/or environmental hazards including airborne contamination and skin-affecting substances.

It is anticipated that all of the investigation work will be performed using Level D protection (no respiratory protection with protective clothing requirements limited to long sleeved shirts, long pants or coveralls, work gloves and steel-toe leather work boots).

Level D may be modified by the HSC to include protective clothing or equipment (Saran-coated disposable coveralls or PVC splash suits, safety glasses, hard hat with face shield, and chemically resistant boots) based upon physical hazards, skin contact concerns, and real-time monitoring.

Real-time air monitoring for total airborne organics using either an OVA or an HNU will determine if and when an upgrade from Level D to a higher level of respiratory protection is warranted. Decisions for an upgrade from Level D to higher levels of protection, mitigative actions, and/or suspension of work are the responsibility of the Project Manager and/or the designated on-site Health & Safety Coordinator.

In the event odors are detected, Level C respiratory protection will be employed. Organic vapor cartridges are capable of removing xylenes at a concentration of 1,000 ppm and trimethylbenzenes at a concentration of 250 ppm.

3.2 Air Monitoring

The Health & Safety Coordinator or his/her properly trained assignee will conduct "Real Time" air monitoring for total organic vapors. 'Real-time' monitoring refers to the utilization of instrumentation, which yields immediate measurements. The utilization of real time monitoring helps determine immediate or long-term risks to on-site personnel and the general public, the appropriate level of personnel respiratory protection necessary, and actions to mitigate the recognized hazard.

3.2.1. Organic Vapor

A. Instrumentation

Real-time monitoring for total organic vapor (TOV) utilizes either a photo-ionization detector (PID) or flame ionization detector (FID). The appropriate PID is an intrinsically safe HNU Systems Model PI-101, MiniRae 3,000 or equivalent PID, which is factory calibrated to benzene and is capable of detecting petroleum-related contamination. The appropriate FID is a Foxboro model 128 Organic vapor Analyzer (OVA), which is factory calibrated to methane.

B. Application

Organic vapor monitoring is performed as outlined in the NYSDOH Community Air Monitoring Plan. Specifically, monitoring shall be conducted at the downwind perimeter of the work zone periodically during work activities. If TOV levels exceed 5 milligrams per meter cubed (mg/m^3) above established pre-work background levels, work activities will be halted and monitoring will be continued under the provision of a Vapor Emission Response Plan (outlined in Section 5).

3.3 Worker Training

Personnel working in the contamination area must be trained, fit-tested, and medically-Certified (OSHA 29 CFR 1910. 134).

All personnel working within the work/exclusion area must confirm their participation in an ongoing health surveillance program. The program must consist of an initial "baseline" examination stipulated by OSHA (29 CFR 1910. 134). The examination is designed to screen for evidence of adverse effects of occupational exposure (particularly to toxic substances) and determine personnel fitness with respect to the use of respiratory protection.

Each worker enlisted in the medical surveillance program receives an annual examination similar to the baseline exam to evaluate irregularities or trends in his/her health with respect to potential exposure. Upon termination of employment, contract/subcontract or job completion, each worker/employee must take an 'exit examination' identical to the annual exam. All physicals will be performed by licensed physicians with medical histories to be confidentially maintained by their employer.

Prior to any work, all workers involved with the project should be aware of the potential chemical, physical and biological hazards discussed in this document, as well as the general safety practices outlined below. A safety briefing by the on-site HSC and/or assistant designee shall take place at the outset of work activities.

3.4 General Safety Practices

The following safety practices shall be followed by all project personnel.

1. Avoid unnecessary skin exposure to subsurface materials. Sleeved shirts tucked into long pants (or coveralls), work gloves, and steel-toe leather work boots are required unless modified gear is approved by the HSC. Remove any excess residual soil from clothes prior to leaving the site.
2. No eating, drinking, gum or tobacco chewing, or smoking allowed in designated work areas. Thoroughly wash hands prior to these activities outside the work area. Avoid sitting on the ground during breaks or while eating and drinking. Thoroughly wash all exposed body areas at the end of the workday.

3. Some symptoms of acute exposure include: dizziness, light-headedness, drowsiness, headache, and nose/eye/skin irritation. If these symptoms are experienced or strong odor is detected, leave the work area and immediately report the incident to the on-site HSC.

3.5 Enforcement

Enforcement of the Site Safety Plan will be the responsibility of the HSC or his/her designee. The Coordinator or his/her designee should be on-site on a full-time basis and perform or directly oversee all aspects of Project Health & Safety operations including: air monitoring; environmental mitigation; personnel respiratory and skin protection; general safety practices; documentation; emergency procedures and protocol; and reporting and recordkeeping as described below.

3.6 Reporting & Recordkeeping

Incidents involving injury, symptoms of exposure, discovery of contained (potentially hazardous) materials, or unsafe work practices and/or conditions should be immediately reported to the HSC.

A logbook must be maintained on-site to document all aspects of HASP enforcement. The log is paginated and dated with entries made on a daily basis in waterproof ink, initialed by the HSC or designee. Log entries should include date and time of instrument monitoring, instrument type, measurement method, test results, calibration and maintenance information, as well as appropriate mitigative actions responding to detections. Miscellaneous information to be logged may include weather conditions, reported complaints or symptoms, regulatory inspections, and reasons to upgrade personnel protection above the normal specification (Level D).

4.0 EMERGENCIES

4.1 EMERGENCY RESPONSE SERVICES

- | | | |
|-----|--|-----------------------|
| (1) | HOSPITAL
Woodhull Medical Center
760 Broadway
Brooklyn, NY 11206 | (718) 963-8000 |
| (2) | AMBULANCE | 911 |
| (3) | FIRE DEPARTMENT
HAZARDOUS MATERIALS | 911 |
| (4) | POLICE DEPARTMENT | 911 |
| (5) | POISON CONTROL CENTER | (800) 222-1222 |

The preceding list and associated attached map (Figure 1) illustrating the fastest route to the nearest hospital must be conspicuously posted in areas of worker congregation and adjacent to all on-site telephones (if any).

4.2 EMERGENCY PROCEDURES

4.2.1 Contact or Exposure to Suspected Hazardous Materials

In the event of a fire, chemical discharge, medical emergency, workers are instructed to immediately notify the HSC and proper emergency services (posted). Should physical contact with unknown or questionable materials occur, immediately wash the affected body areas with clean water and notify the HSC. Anyone experiencing symptoms of exposure should exit the work area, notify the HSC, and seek medical attention.

4.2.2 Personnel Decontamination, First Aid, and Fire Protection

The first step in the treatment of skin exposure to most chemicals is to rinse the affected area with water. For this reason, adequate amounts of potable water and soap are maintained on-site in a clearly designated and readily-accessible location. Portable emergency eyewash stations and a first aid kit must be made available and maintained in the same locations as the potable water. Fire extinguishers are also to be maintained on-site in designated locations. All on-site personnel are to be made aware of the locations of the above-mentioned on-site Health & Safety accommodations during the initial Health and Safety briefing.

4.2.3 Ingress/egress

Clear paths of ingress/egress to work zones and site entrances/exits must be maintained at all times. Unauthorized personnel are restricted from accessing the site.

5.0 VAPOR EMISSIONS RESPONSE PLAN

If the ambient air concentration of organic vapors exceeds 5 mg/m^3 above background at the perimeter of the work area, activities will be halted and monitoring continued. If the organic vapor level decreases below 5 mg/m^3 above background, work activities can resume. If the organic vapor levels are greater than 5 mg/m^3 over background but less than 25 ppm over background at the perimeter of the work area, activities can resume provided:

- The organic vapor level 200 ft. downwind of the work area or half the distance to the nearest residential or commercial structure, whichever is less, is below 5 mg/m^3 over background.

If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown. When work shutdown occurs, downwind air monitoring as directed by the Safety Officer will be implemented to ensure that vapor emission does not impact the nearest residential or commercial structure at levels exceeding those specified in the Major Vapor Emission section.

Major Vapor Emission

If any organic levels greater than 5 mg/m^3 over background are identified 200 feet downwind from the work area or half the distance to the nearest residential or commercial property, whichever is less, all work activities must be halted.

If, following the cessation of the work activities, or as the result of an emergency, organic levels persist above 5 mg/m^3 above background 200 feet downwind or half the distance to the nearest residential or commercial property from the work area, then the air quality must be monitored within 20 feet of the perimeter of the nearest residential or commercial structure (20 Foot Zone).

If efforts to abate the emission source are unsuccessful and, if organic vapor levels are approaching 5 mg/m³ above background for more than 30 minutes in the 20 Foot Zone, then the Major Vapor Emission Response Plan shall automatically be placed into effect;

However, the Major Vapor Emission Response Plan shall be immediately placed into effect if organic vapor levels are greater than 10 mg/m³ above background.

Major Vapor Emission Response Plan

Upon activation, the following activities will be undertaken:

1. All Emergency Response Contacts as listed in the Health & Safety Plan of the Corrective Action Plan will go into effect.
2. The local police authorities will immediately be contacted by the Safety Officer and advised of the situation.
3. Frequent air monitoring will be conducted at 30 minute intervals within the 20 Foot Zone. If two successive readings below action levels are measured, air monitoring may be halted or modified by the Safety Officer.

Metal: Noncombustible Solid in bulk form, but a slight explosion hazard in the form of dust when exposed to flame.

Incompatibilities & Reactivities Strong oxidizers, bromine azide [Note: Hydrogen gas can react with inorganic arsenic to form the highly toxic gas arsine.]

Exposure Routes inhalation, skin absorption, skin and/or eye contact, ingestion

Symptoms Ulceration of nasal septum, dermatitis, gastrointestinal disturbances, peripheral neuropathy, resp irritation, hyperpigmentation of skin, [potential occupational carcinogen]

Target Organs Liver, kidneys, skin, lungs, lymphatic system

Cancer Site [lung & lymphatic cancer]

Personal Protection/Sanitation (See [protection codes \(protect.html\)](#))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated/Daily
Remove: When wet or contaminated
Change: Daily
Provide: Eyewash, Quick drench

First Aid (See [procedures \(firstaid.html\)](#))
Eye: Irrigate immediately
Skin: Soap wash immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations
 (See [Appendix E \(nengapdx.html\)](#))

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:

(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted acid gas canister having an N100, R100, or P100 filter.

[Click here \(pgintrod.html#nrp\)](#) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

[Important additional information about respirator selection \(pgintrod.html#mustread\)](#)

Respirator Recommendations

Mercury vapor:

NIOSH

Up to 0.5 mg/m³:

(APF = 10) Any chemical cartridge respirator with cartridge(s) providing protection against the compound of concern[†]

(APF = 10) Any supplied-air respirator

Up to 1.25 mg/m³:

(APF = 25) Any supplied-air respirator operated in a continuous-flow mode

(APF = 25) Any powered, air-purifying respirator with cartridge(s) providing protection against the compound of concern[†](canister)

Up to 2.5 mg/m³:

(APF = 50) Any chemical cartridge respirator with a full facepiece and cartridge(s) providing protection against the compound of concern[†]

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern[†]

(APF = 50) Any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode

(APF = 50) Any powered, air-purifying respirator with a tight-fitting facepiece and cartridge(s) providing protection against the compound of concern(canister)

(APF = 50) Any self-contained breathing apparatus with a full facepiece

(APF = 50) Any supplied-air respirator with a full facepiece

Up to 10 mg/m³:

(APF = 1000) Any supplied-air respirator operated in a pressure-demand or other positive-pressure mode

Emergency or planned entry into unknown concentrations or IDLH conditions:

(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern

Any appropriate escape-type, self-contained breathing apparatus

Other mercury compounds: NIOSH/OSHA

Up to 1 mg/m³:

(APF = 10) Any chemical cartridge respirator with cartridge(s) providing protection against the compound of concern[†]

(APF = 10) Any supplied-air respirator

Up to 2.5 mg/m³:

(APF = 25) Any supplied-air respirator operated in a continuous-flow mode

(APF = 25) Any powered, air-purifying respirator with cartridge(s) providing protection against the compound of concern†(canister)

Up to 5 mg/m³:

(APF = 50) Any chemical cartridge respirator with a full facepiece and cartridge(s) providing protection against the compound of concern†

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern†

(APF = 50) Any supplied-air respirator that has a tight-fitting facepiece and is operated in a continuous-flow mode

(APF = 50) Any powered, air-purifying respirator with a tight-fitting facepiece and cartridge(s) providing protection against the compound of concern(canister)

(APF = 50) Any self-contained breathing apparatus with a full facepiece

(APF = 50) Any supplied-air respirator with a full facepiece

Up to 10 mg/m³:

(APF = 1000) Any supplied-air respirator operated in a pressure-demand or other positive-pressure mode

Emergency or planned entry into unknown concentrations or IDLH conditions:

(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted canister providing protection against the compound of concern

Any appropriate escape-type, self-contained breathing apparatus

(APF = 10) Any supplied-air respirator*

(APF = 50) Any self-contained breathing apparatus with a full facepiece

Emergency or planned entry into unknown concentrations or IDLH conditions:

(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

Emergency or planned entry into unknown concentrations or IDLH conditions:

(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

[Important additional information about respirator selection \(pgintrod.html#mustread\)](#)

RE: 7 Whipple Street, Brooklyn, NY

Order No.: 1401081

Dear Jessica Proscia:

American Analytical Laboratories, LLC. received 8 sample(s) on 1/17/2014 for the analyses presented in the following report.

Samples were analyzed in accordance with the test procedures documented on the chain of custody and detailed throughout the text of this report. The results reported herein relate only to the items tested or to the samples as received by the laboratory. This report may not be reproduced, except in full, without the approval of American Analytical Laboratories, LLC and is not considered complete without a cover page and chain of custody documentation. The limits (LOQ) provided in the data package are analytical reporting limits and not Federal or Local mandated values to which the sample results should be compared.

There were no problems with the analyses and all data for associated QC met laboratory specifications. If there are any exceptions a Case Narrative is provided in the report or the data is qualified either on the sample results or in the QC section of the report. This package has been reviewed by American Analytical Laboratories' QA Department/Laboratory Director to comply with NELAC standards prior to report submittal.

If you have any questions regarding these tests results, please do not hesitate to call (631) 454-6100 or email me directly at lbeyer@american-analytical.com.

Sincerely,

Lori Beyer
Lab Director
American Analytical Laboratories, LLC.

Case Narrative

WO#: 1401081
Date: 1/27/2014

CLIENT: CA Rich Consultants Inc.
Project: 7 Whipple Street, Brooklyn, NY

Samples were analyzed using the methods outlined in the following references:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW846 and additional methods as detailed throughout the text of the report. All method blanks, laboratory spikes, and/or matrix spikes met quality assurance objectives with exceptions notated in this Narrative discussion and/or in the QC Summary Section of the lab report with appropriate qualifiers. Additional quality control information such as surrogate recovery values for organic testing is provided as part of the analytical results.

Soil sample results analyzed for Volatile Organics via preparation method SW846 Method 5035A via the Low Level procedures potentially may be estimated, "J" (biased low) since the samples for this test were not collected according to the 5035A Method.

Volatile LCS are analyzed with preservatives - HCL/NaHSO₄/Methanol depending on level of analysis (high/low) similar to sample analysis. Outliers can be attributed to the presence of chemical preservatives. 2-Chloroethyl vinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Pesticide analysis by Method 8081B (if applicable to this work order) is analyzed on two distinct columns. Once a target compound is qualitatively confirmed by detection on both columns and quantitation is determined to be >40% between the two columns, AAL's policy is to report the lower of the values as suggested by SW846 Method 8000C in cases where no interference exists. If in the professional judgment of the laboratory, the higher value must be utilized this is explained in the lab report.

The following parameters (if included in this report) are not offered by NY ELAP: VOA 8260 Soil; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Diisopropyl ether, Ethanol, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl Acetate, n-Butyl Acetate, n-Propyl Acetate. VOA 8260 Liquid; 1,2,4,5-Tetramethylbenzene, Chlorodifluoromethane, Freon-114, p-Diethylbenzene, p-Ethyltoluene, Isopropyl Acetate, n-Amyl acetate, n-Butyl Acetate, n-Propyl Acetate. Pesticides 8081 Soil; DBCP. Herbicides 8151 Soil; 3,5-Dichlorobenzoic Acid, 4-Nitrophenol, Acifluorfen, Bentazon, Chloramben, DCPA, Picloram .Lachat 10-107-6-1B Ammonia in Soil, SM 2540G Total Volatile Solids, Soil TKN, Soil Organic Nitrogen, Percent Moisture, SM 4500-SO₃ B Sulfite in Liquid, Total Sulfur in Soil, Acid Soluble Chloride by ASTM C1152, Water Soluble Chloride by ASTM C1218, Chlorine Demand by SM 2350 B, Total Residual Chlorine in Liquid

 Custody seals intact on shipping container/cooler? Yes No Not Present
 No. Seal Date: Signed By:
 5. Was an attempt made to cool the samples? Yes No NA
 6. Were all samples received at a temperature of >0° C to 6.0°C Yes No NA
 7. Sample(s) in proper container(s)? Yes No
 8. Sufficient sample volume for indicated test(s)? Yes No
 9. Are samples (except VOA and ONG) properly preserved? Yes No
 10. Was preservative added to bottles? Yes No NA
 11. Is the headspace in the VOA vials less than 1/4 inch or 6 mm? Yes No No VOA Vials
 12. Were any sample containers received broken? Yes No
 13. Does paperwork match bottle labels? Yes No
 (Note discrepancies on chain of custody)
 14. Are matrices correctly identified on Chain of Custody? Yes No
 15. Is it clear what analyses were requested? Yes No
 16. Were all holding times able to be met? Yes No
 (If no, notify customer for authorization.)

Special Handling (if applicable)

17. Was client notified of all discrepancies with this order? Yes No NA

Definitions:

Sample Result and QC Summary Qualifiers - Level I and Level II Reports

B - The analyte was detected in the associated method blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.

E - The value is above the quantitation range

J - The analyte was detected below the limit of quantitation but greater than the established Limit of Detection (LOD). There is greater uncertainty associated with these results and data should be considered as estimated.

U - The compound was analyzed for but not detected.

H - Holding time for preparation or analysis has been exceeded.

S - Spike recovery is outside accepted recovery limits.

R - RPD is outside accepted recovery range.

P - Secondary column exceeds 40% difference for GC test.

* - Calibration exceeds method requirement. Due to the large number of analytes for organic testing, the method allows 10% of analytes to have %RSD and/or %D to be >20%.

LOD - Limit of Detection; the lowest level the analyte can be determined to be statistically different from a blank.

LOQ - Limit of Quantitation; the lowest amount of analyte in a sample that can be quantitatively determined with suitable precision and accuracy.

m - Analyte was manually integrated for GC/MS.

Technical Report for

C. A. Rich Consultants

Whipple Apartments, Whipple Street, Brooklyn, NY

Accutest Job Number: JB58146

Sampling Date: 01/17/14

Report to:

CASE NARRATIVE / CONFORMANCE SUMMARY

Client: C. A. Rich Consultants

Job No JB58146

Site: Whipple Apartments, Whipple Street, Brooklyn, NY

Report Date 1/22/2014 11:20:01 A

On 01/18/2014, 4 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at Accutest Laboratories. Samples were intact and chemically preserved, unless noted below. An Accutest Job Number of JB58146 was assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section.

Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

Volatiles by GCMS By Method TO-15

Matrix: AIR

Batch ID: V3W1466

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB57857-1DUP were used as the QC samples indicated.
- RPD(s) for Duplicate for 1,2,4-Trimethylbenzene, 1,3,5-Trimethylbenzene, 4-Ethyltoluene are outside control limits for sample JB57857-1DUP.

Matrix: AIR

Batch ID: V5W99

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) JB57931-4DUP were used as the QC samples indicated.

Accutest certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting Accutest's Quality System precision, accuracy and completeness objectives except as noted.

Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria.

Accutest Laboratories is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety. Data release is authorized by Accutest Laboratories indicated via signature on the report cover

Accutest Laboratories Sample Receipt Summary

Accutest Job Number: JB58146 Client: _____ Project: _____
 Date / Time Received: 1/18/2014 Delivery Method: _____ Airbill #'s: _____

Cooler Temps (Initial/Adjusted):

<u>Cooler Security</u>	<u>Y or N</u>			<u>Y or N</u>	
1. Custody Seals Present:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	3. COC Present:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Custody Seals Intact:	<input checked="" type="checkbox"/>	<input type="checkbox"/>	4. Smpl Dates/Time OK	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<u>Cooler Temperature</u>	<u>Y or N</u>	
1. Temp criteria achieved:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Cooler temp verification:	_____	
3. Cooler media:	_____	
4. No. Coolers:	0	

<u>Quality Control Preservation</u>	<u>Y</u>	<u>or</u>	<u>N</u>	<u>N/A</u>
1. Trip Blank present / cooler:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
2. Trip Blank listed on COC:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
3. Samples preserved properly:	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
4. VOCs headspace free:	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

<u>Sample Integrity - Documentation</u>	<u>Y or N</u>	
1. Sample labels present on bottles:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. Container labeling complete:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Sample container label / COC agree:	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<u>Sample Integrity - Condition</u>	<u>Y or N</u>	
1. Sample recvd within HT:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2. All containers accounted for:	<input checked="" type="checkbox"/>	<input type="checkbox"/>
3. Condition of sample:	Intact	

<u>Sample Integrity - Instructions</u>	<u>Y</u>	<u>or</u>	<u>N</u>	<u>N/A</u>
1. Analysis requested is clear:	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
2. Bottles received for unspecified tests	<input type="checkbox"/>	<input checked="" type="checkbox"/>		
3. Sufficient volume recvd for analysis:	<input checked="" type="checkbox"/>	<input type="checkbox"/>		
4. Compositing instructions clear:	<input type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>
5. Filtering instructions clear:	<input type="checkbox"/>	<input type="checkbox"/>		<input checked="" type="checkbox"/>

		JB37003-1	A1225	0.5	1.2	1.1	6000	20	9.8	10,000	500	550	

Definition:

$$\text{Final DF} = (\text{Original Canister DF}) \times (\text{Secondary Canister DF})$$

$$\text{Dilution Factor at Instrument} = \frac{(\text{Final Canister Dilution Factor}) \times (\text{Normal Sampling Volume in cc})}{(\text{Sample Volume in cc Injected})}$$

Example:

Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig or 750cc equiv volume. This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20(from canister dilution) x 20(from instrument dilution) = 400

Notes:

All strikeouts must be initial, dated and reason code applied as follows: # 1 = Reviewer Correction Error, # 2 = Transcription Error, # 3 = Computer Miscalculation, # 4 = Analyst's Correction Error

Definition: Final DF = (Original Canister DF) x (Secondary Canister DF)
 Dilution Factor at Instrument = (Final Canister Dilution Factor) x (Normal Sampling Volume in cc)
 (Sample Volume in cc Injected)

Example: Original Canister is diluted 2x for manual sample draw. 75cc from this canister is added to a 375cc minican and brought to 14.7 psig or 750cc equiv volume. This results in an additional dilution of 750/75 or 10. The final canister dilution factor is 2 x 10 = 20. From the dilution canister 20cc is injected at the instrument where normal volume is 400cc. This is an additional instrument dilution factor of 20. The final dilution multiplier is 20(from canister dilution) x 20(from instrument dilution) = 400

Notes:
