NYC VCP Cleanup Plan Remedial Activities to Begin

The New York City Office of Environmental Remediation (OER) is providing this Fact Sheet pursuant to the New York City Voluntary Cleanup Program (VCP). OER has approved the Remedial Action Work Plan (RAWP) submitted by 7 West 21, LLC for 7 West 21st Street, Manhattan, New York (Block 823, Lot 31). The remedial work will begin in October 2014. The RAWP can be reviewed electronically or in person at the document repositories identified in the box at left.

Site Description:

The 24,000 square-foot site is currently occupied by an asphalt-paved commercial parking lot. The proposed future use of the Site consists of two mixed-use, 18-story residential and commercial towers connected at the sub-cellar, cellar, and first floor.

Summary of the Remedy:

The remedial action for 7 West 21st Street is a Track 1 Unrestricted Use cleanup. The specific elements of the proposed remedial action include:

- Preparation of a Community Protection Statement and performance of all required NYC VCP citizen participation activities according to an approved Citizen Participation Plan;
- Performance of a Community Air Monitoring Program for particulates and volatile organic carbon compounds;
- Selection of NYSDEC 6 NYCRR Part 375 Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs);
- Excavation and removal of soil/fill in excess of SCOs;
- Collection and analysis of endpoint samples to determine if the remedy meets SCOs;
- Transportation and off-site disposal of all soil/fill material at permitted facilities in accordance with applicable laws and regulations for handling, transport and disposal of contaminated soil; and
- Submission of a Remedial Action Report (RAR) that describes the remedial activities and certifies that the remedial requirements have been achieved and lists any changes from this RAWP.

If Track 1 Cleanup is not achieved, the following construction elements will constitute Engineering and Institutional Controls:

- Installation of a waterproofing/vapor barrier system as part of the construction beneath the building slabs and along subsurface sidewalls.
- Construction of a composite cover system consisting of 6" thick concrete building slabs to prevent human exposure to residual soil/fill remaining under the Site.
- Construction and operation of a ventilated parking garage in the sub-cellar level in accordance with NYC Building Code requirements.
- Submission of an approved Site Management Plan (SMP) in the RAR for long-term management of residual fill, including certification of Engineering and Institutional Controls and reporting at a specified frequency;
- Continued registration with E designation for the property.

Cleanup activities are scheduled to begin in October 2014 and are expected take approximately five months to complete.

Next Steps: After the enrollee completes the remedial work, a RAR will be prepared and submitted to OER. The RAR will describe the cleanup activities and certify that all cleanup requirements were met. Once the RAR is approved, OER will issue a Notice of Completion, a City liability release, and a New York City Green Property Certificate. OER will then issue a fact sheet announcing the completion of the remedial action and identify all engineering and institutional controls to be used at the Site.

If you have any questions or know of any neighbor that would like to be added to the site contact list, please contact the OER Project Manager listed on the front page of this Fact Sheet. We encourage you to share this Fact Sheet with neighbors and tenants and/or post it in a prominent area of your building. For information regarding New York City's Voluntary Cleanup Program, please visit our website at: www.nyc.gov/oer.
