CERTIFICATION

I, William E. Silveri, am a Qualified Environmental Professional, as defined in RCNY § 43-1402(ar). I have primary direct responsibility for implementation of the Remedial Investigation for the 31-07 38th Avenue (NYC VCP Site No. 16CVCP002Q and OER Project 15EHAN396Q). I am responsible for the content of this Remedial Investigation Report (RIR), have reviewed its contents and certify that this RIR is accurate to the best of my knowledge and contains all available environmental information and data regarding the property.

William Silveri 07/13/2015

EXECUTIVE SUMMARY

The Remedial Investigation Report (RIR) provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy pursuant to RCNY§ 43-1407(f). The remedial investigation (RI) described in this document is consistent with applicable guidance.

Site Location and Current Usage

The Site is located at 31-07 38th Avenue in the Long Island City section in Queens, New York and is identified as Block 373 and eastern portion of Lot 1 on the New York City Tax Map. Figure 1 shows the Site location. The Site is approximately 6,000-square feet and is bounded by a one-story industrial warehouse to the north, 38th Street to the south, a one-story industrial warehouse to the east, and an active gasoline filling station and one-story service station to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used as an auto body repair and painting shop and contains a one-story warehouse with several hydraulic oil lifts, a spray booth/oven, and a partial basement which contains an active 275 gallon aboveground storage tank, which is used by the spray booth/oven.

Summary of Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 6-story mixed commercial and residential use building with a footprint of approximately 5,500 square feet. The existing on Site building will be expanded towards southwest portion of the lot. The current Lot 1 will be subdivided into two lots, with the proposed new building occupying the entire Lot 2. The total gross square footage of the proposed building will be approximately 20,700 square feet, including approximately 16,800 square feet of residential space and 3,900 square feet of commercial space. Partial excavation will be performed in the southwest portion of the Site to expand the existing partial basement to a depth of approximately 12 feet below grade and across portions of the Site to install new columns and foundation walls to a depth of approximately 5 feet below grade. Additional excavation will be performed in the eastern portion of the Site for an elevator pit to a depth of approximately 5 feet below grade. The total amount of soil expected to be removed for excavation of the new basement, structural footings, and parking elevator is approximately 650 cubic yards.

The new basement will house mechanical and utility equipment rooms for both the residential and commercial spaces and a passenger elevator for the residences. The ground floor will be utilized for the commercial space. Additionally, there will also be a residential lobby and vehicle elevator on the ground floor. The second floor will be utilized for parking. Floors above (3rd through 6th) will be occupied by residential units. The existing Lot 1 will be subdivided so that the eastern half will comprise only the Site. Layout of the proposed site development is presented in Figure 3.

The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

Summary of Past Uses of Site and Areas of Concern

Based upon the review of the Phase I Environmental Site Assessment (ESA) Report prepared by Nova Geophysical & Environmental Services (Nova) in March 2013, the Site history was established. The Site consists of an approximately 13,900 square foot lot that is currently developed with three one-story buildings. The first building, with an address of 37-33 31st Street, is a metal works facility which consists of a one-story commercial building of approximately 2,000 square feet. The second building, with an address of 31-05 38th Avenue, is an active gasoline filling station with a one-story commercial building that is used as a service station with a combined square footage of approximately 5,000 square feet. The last building (the Site being redeveloped), with an address of 31-07 38th Avenue, is an auto body repair and paint shop housing within a one-story commercial building occupying approximately 6,000 square feet. The Phase I ESA identified the Site (31-07 38th Avenue) as a registered aboveground storage tank (AST) facility, and identified an active 275-gallon AST in the partial basement of the Site, which is used for storing number two fuel oil. The active 275 gallon AST is currently being used by the spray booth/oven. The Phase I ESA also identified the Site as having an E-Designation for hazardous materials, noise, and air quality.

The AOCs identified for this site include:

1. Presence of tetrachloroethylene (PCE) and trichloroethylene (TCE) in soil vapor underneath the Site.

Figure 4 shows the Areas of Concern

Summary of the Work Performed under the Remedial Investigation

Athenica performed the following scope of work on behalf of Kayafas Contracting Company in June of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performed a Ground Penetrating Radar (GPR) survey;
3. Installed seven (7) soil borings across the entire project Site and collected fourteen (14) soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed three (3) groundwater monitoring wells throughout the Site to establish groundwater flow and collected three (3) groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed one (1) soil vapor and two (2) sub-slab vapor probes around Site and collected three (3) samples for chemical analysis.

Summary of Environmental Findings

1. Elevation of the property is approximately 34 feet.
2. Depth to groundwater ranges from 21.1 to 21.6 feet at the Site.
3. Groundwater flow is generally west-southwest at Site.
4. Bedrock was not encountered during this investigation.
5. The stratigraphy of the site, from the surface down, consists of 2 feet of medium to coarse sand with urban fill, underlain by 28 feet of fine to medium sand.
6. Soil/fill samples collected during this RI were compared to 6NYCRR Part 375-6.8 Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs) and Track 2 Restricted Use Restricted-Residential SCOs. Soil results showed that there were no detectable concentrations of PCBs in any of the soil samples. SVOCs were not detected in any of the soil samples above their respective Unrestricted Use SCOs. VOCs were not detected in any of the soil samples above their respective Unrestricted Use SCOs, with the exception of acetone (0.0039 mg/kg) in one soil sample. It should be noted that acetone is a common laboratory contaminant. One pesticide; 4,4'-DDT (0.061 mg/kg) was

detected above its respective Unrestricted Use SCO in one shallow (zero to 2 feet) soil samples. Two (2) metals, including lead (max. of 94.9 mg/kg) and zinc (max. of 129 mg/kg) were detected in one shallow (zero to 2 feet) soil sample above their respective Unrestricted Use SCOs. None of these metals exceeded their respective Track 2 Restricted Residential Use SCOs. Overall, the soil chemistry is unremarkable and was consistent with the observed native material in areas throughout New York City.

7. Groundwater samples collected during this investigation were compared to NYSDEC 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Pesticides or PCBs were not detected in any of the groundwater samples above their respective GQS. One VOC, chloroform (max. of 13 µg/L), was detected in all groundwater samples but only exceeded its respective GQS in MW-1. No other VOCs were detected exceeding their respective GQS. Two SVOCs, phenol (max. of 8.1 µg/L) and bis(2-ethylhexyl)phthalate (max. of 7.25 µg/L) were found to exceed their GQS in MW-1 and MW-3, respectively. Several dissolved metals were detected in groundwater samples but only sodium (max. of 65,900 µg/L) exceeded its respective GQS standards all three groundwater samples.
8. Sub-slab vapor and soil vapor samples collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006. The sub-slab vapor and soil vapor results indicated elevated levels of petroleum related compounds in all of the samples, including BTEX (max. 1,960 µg/m³). Chlorinated VOCs were detected at moderate concentrations in all of the samples. 1,1,1-trichloroethane (TCA) or carbon tetrachloride were not detected in any of the sub-slab vapor or soil vapor samples. Tetrachloroethylene (PCE) was detected in all three samples with a maximum concentration of 280 µg/m³. Trichloroethylene (TCE) was detected in all three samples with a maximum concentration of 110 µg/m³. Concentrations of PCE and TCE are above the monitoring/mitigation ranges established by NYSDOH. Since the soil and groundwater sample results showed no detections of PCE and TCE in all of the soil samples, the PCE and TCE in soil vapor is thought to come from an off-Site source.

REMEDIAL INVESTIGATION REPORT

1.0 SITE BACKGROUND

Kayafas Contracting Company has applied to enroll in the New York City Voluntary Cleanup Program (NYC VCP) to investigate and remediate a 0.13-acre site located at 31-07 38th Avenue in Long Island City section of Queens, New York. A mixed-use (residential and commercial) building is proposed for the property. The RI work was performed between June 3, 2015 and June 5, 2015. This RIR summarizes the nature and extent of contamination and provides sufficient information for establishment of remedial action objectives, evaluation of remedial action alternatives, and selection of a remedy that is protective of human health and the environment consistent with the use of the property pursuant to RCNY§ 43-1407(f).

1.1 Site Location and Current Usage

The Site is located at 31-07 38th Avenue in the Long Island City section in Queens, New York and is identified as Block 373 and eastern portion of Lot 1 on the New York City Tax Map. Figure 1 shows the Site location. The Site is approximately 6,000-square feet and is bounded by a one-story industrial warehouse to the north, 38th Street to the south, a one-story industrial warehouse to the east, and an active gasoline filling station and one-story service station to the west. A map of the site boundary is shown in Figure 2. Currently, the Site is used as an auto body repair and painting shop and contains a one-story warehouse with several hydraulic oil lifts, a spray booth/oven, and a partial basement.

1.2 Proposed Redevelopment Plan

The proposed future use of the Site will consist of a new 6-story mixed commercial and residential use building with a footprint of approximately 5,500 square feet. The existing on Site building will be expanded towards southwest portion of the lot. The current Lot 1 will be subdivided into two lots, with the proposed new building occupying the entire Lot 2. The total gross square footage of the proposed building will be approximately 20,700 square feet, including approximately 16,800 square feet of residential space and 3,900 square feet of commercial space. Partial excavation will be performed in the southwest portion of the Site to expand the existing partial basement to a depth of approximately 12 feet below grade and across portions of the Site to install new columns and foundation walls to a depth of approximately 5 feet below grade. Additional excavation will be performed in the eastern portion of the Site for

an elevator pit to a depth of approximately 5 feet below grade. The total amount of soil expected to be removed for excavation of the new basement, structural footings, and parking elevator is approximately 650 cubic yards.

The new basement will house mechanical and utility equipment rooms for both the residential and commercial spaces and a passenger elevator for the residences. The ground floor will be utilized for the commercial space. Additionally, there will also be a residential lobby and vehicle elevator on the ground floor. The second floor will be utilized for parking. Floors above (3rd through 6th) will be occupied by residential units. The existing Lot 1 will be subdivided so that the eastern half will comprise only the Site. Layout of the proposed site development is presented in Figure 3.

The current zoning designation is M1-2/R6A. The proposed use is consistent with existing zoning for the property.

1.3 Description of Surrounding Property

The Site is located within a primarily mixed use residential, commercial, and manufacturing area of Queens, New York. The Site is bounded by a one-story industrial warehouse to the north, 38th Street to the south, a one-story industrial warehouse to the east, and an active gasoline filling station and one-story service station to the west.

According to the OER Searchable Property Environmental E-Database (SPEED), there are no sensitive receptors (such as schools, hospitals, and day-care facilities) within a 500-foot radius of the Site.

Figure 2 shows the surrounding land usage.

2.0 SITE HISTORY

2.1 Past Uses and Ownership

Based upon the review of the Phase I Environmental Site Assessment (ESA) Report prepared by Nova Geophysical & Environmental Services (Nova) in March 2013, the Site history was established.

The Site consists of an approximately 13,900 square foot lot that is currently developed with three one-story buildings. The first building, with an address of 37-33 31st Street, is a metal works facility which consists of a one-story commercial building of approximately 2,000 square feet. The second building, with an address of 31-05 38th Avenue, is an active gasoline filling station with a one-story commercial building that is used as a service station with a combined square footage of approximately 5,000 square feet. The last building (the Site being redeveloped), with an address of 31-07 38th Avenue, is an auto body repair and paint shop housing within a one-story commercial building occupying approximately 6,000 square feet. The Phase I ESA identified the Site (31-07 38th Avenue) as a registered aboveground storage tank (AST) facility, and identified an active 275-gallon AST in the partial basement of the Site, which is used for storing number two fuel oil. The active 275 gallon AST is currently being used by the spray booth/oven. The Phase I ESA also identified the Site as having an E-Designation for hazardous materials, noise, and air quality.

The Phase I ESA Report was not previously submitted to OER, and a copy of the Phase I ESA is found in Appendix A.

2.2 Previous Investigations

Nova performed a Phase I ESA on March 13, 2013. The following RECs were identified as part of the Phase I ESA:

- Based on a review of the Sanborn fire insurance maps, the City Directories and the historical usage of the site and surrounding area as automobile repair filling stations, repair stations, and painting stations since at least 1939, the historical usage of the site and surrounding area may represent a recognized environmental condition for the site.
- The subject site is identified as an E-designated Site with E-Number 218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural

Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation by the New York City Department of Environmental Protection (NYC DEP).

The Phase I ESA Report was not previously submitted to OER, and a copy of the Phase I ESA is found in Appendix A.

CORE Environmental Consultants (Core) performed a Limited Subsurface Investigation on September 20, 2013 at the Site. This investigation consisted of four (4) soil borings down to 12 to 24 feet below grade and the collection of four (4) soil samples, at varying depths. The samples during this 2013 investigation were analyzed for VOCs and SVOCs per NYSDEC CP-51 parameters. VOCs and SVOCs were not detected in any of the samples collected.

Nova performed a Phase II Subsurface Site Investigation on November 29, 2013. The previous investigation was conducted at 37-33 31st Street, 31-05 38th Avenue, and 31-07 38th Avenue (the Site). While the previous investigation consisted of a geophysical survey and ten (10) soil borings down to 30 feet below grade, only two (2) soil borings were located in the Site boundary. Nova collected twenty (20) soil samples for laboratory analysis during the 2013 investigation and analyzed for VOCs, SVOCs, TAL metals, pesticides, and PCBs. VOCs, pesticides, and PCBs were not detected in any of the samples collected. The Nova report did not indicate which boring numbers corresponded to soil boring locations. SVOCs were not detected in any of the samples, except for SB-10 (0-2') where the concentrations of the detected compounds were below the NYSDEC Table 375-6.8(a) Unrestricted Use Soil Cleanup Objectives (SCOs). Metals generally did not exceed their Unrestricted Use SCOs, with the exception of lead in about half of the samples, mercury in one sample, and zinc in two samples. The concentrations of lead, mercury, and zinc did not exceed their respective Restricted Use – Restricted Residential SCOs.

A copy of the Limited Subsurface Investigation Report by Core and the Phase II Subsurface Site Investigation Report by Nova is provided in Appendix A.

2.3 Site Inspection

Mr. Michael Mandac of Athenica performed a Site inspection of May 22, 2015. The Site reconnaissance consisted of a walkthrough of the Site observing conditions throughout the entire auto body shop and the partial basement, as well as a walkthrough of the surrounding neighborhood. At the date of the inspection, the Site consisted of an auto body repair and paint shop housed within a one-story commercial building.

2.4 Areas of Concern

The AOCs identified for this site include:

1. Presence of tetrachloroethylene (PCE) and trichloroethylene (TCE) in soil vapor underneath the Site.

A map showing areas of concern is presented in Figure 4.

3.0 PROJECT MANAGEMENT

3.1 Project Organization

The Qualified Environmental Profession (QEP) responsible for preparation of this RIR is William E. Silveri.

3.2 Health and Safety

All work described in this RIR was performed in full compliance with applicable laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements.

3.3 Materials Management

All material encountered during the RI was managed in accordance with applicable laws and regulations.

4.0 REMEDIAL INVESTIGATION ACTIVITIES

Athenica performed the following scope of work on behalf of Kayafas Contracting Company in June of 2015:

1. Conducted a Site inspection to identify AOCs and physical obstructions (i.e. structures, buildings, etc.);
2. Performed a Ground Penetrating Radar (GPR) survey;
3. Installed seven (7) soil borings across the entire project Site and collected fourteen (14) soil samples for chemical analysis from the soil borings to evaluate soil quality;
4. Installed three (3) groundwater monitoring wells throughout the Site to establish groundwater flow and collected three (3) groundwater samples for chemical analysis to evaluate groundwater quality;
5. Installed one (1) soil vapor and two (2) sub-slab vapor probes around Site and collected three (3) samples for chemical analysis.

Fieldwork was photo documented and Appendix B provides the investigation photographs.

4.1 Geophysical Investigation

Athenica contracted Ground Penetrating Radar Systems (GPRS) to conduct a geophysical survey across the Site on June 3 and 4, 2015. The purpose of the GPR was to determine if any anomalies were present at the Site and to clear all sampling locations of any potential subsurface obstructions. GPRS utilized a 400 MHZ ground penetrating radar (GPR) instrument along transects approximately two feet apart. The survey was performed in all accessible portions of the Site. The geophysical survey did not identify any anomalies indicative of an underground storage tank (UST) at the Site or obstructions in the drilling locations. A copy of the geophysical survey report describing the methodologies and findings is included in Appendix C.

4.2 Borings and Monitoring Wells

Drilling and Soil Logging

A total of seven (7) soil borings were installed using a direct-push drill rig. The borings were designated SB-1 through SB-7. SB-1 and SB-4 were installed to 12 feet bgs. SB-2 was installed to a depth of 30 feet bgs. SB-3, SB-5, SB-6 and SB-7 were installed to 8 feet bgs.

From each of the direct-push soil borings, soil samples were continuously collected from grade to the boring termination depth and screened for evidence of contamination utilizing field observations (odor and/or staining) and a photoionization detector (PID). A PID makes use of the principle of photoionization for the detection and qualitative measurement of organic vapors. A PID does not respond to all compounds similarly, rather, each compound has its own response factor relative to its calibration. For this investigation, the PID was calibrated to the compound isobutylene, as published by the manufacturer. Light staining in the shallow zone (zero to 2 feet bgs) in all borings and slightly elevated PID readings were observed SB-1 (with a maximum of 18.1 ppm in the zero to 2 foot interval), SB-2 (with a maximum of 7.6 ppm in the zero to 2 foot interval), SB-3 (with a maximum of 60.0 ppm in the 2 to 4 foot interval), SB-4 (with a maximum of 25.0 ppm in the 4 to 6 foot interval), SB-5 (with a maximum of 0.6 ppm in the 4 to 6 foot interval), SB-6 (with a maximum of 0.2 ppm in the zero to 2 foot interval), and SB-7 (with a maximum of 51.2 ppm in the 2 to 4 foot interval).

Boring logs were prepared by a geologist are attached in Appendix D. A map showing the location of soil borings is shown in Figure 5.

Groundwater Monitoring Well Construction

A total of three (3) groundwater monitoring wells were installed to determine the groundwater quality beneath the Site on June 3 and June 4, 2015. The three monitoring wells were constructed of 1-inch Schedule 40 PVC with a 15-foot screened interval which intercepted the groundwater table at the approximate mid-point. SB-2 was converted into MW-1 and installed to a depth of 30 feet bgs. SB-5 and SB-6 were converted into MW-2 and MW-3, respectively, to a depth of 28 feet bgs. The monitoring well construction details are included in Appendix E. Monitoring well locations are shown in Figure 5.

Survey

The locations of soil borings and sub-slab vapor and soil vapor locations were field measured. A land survey was used to identify the location and elevation of the groundwater monitoring wells. The groundwater beneath the Site flows towards the west-southwest, which is consistent with the regional groundwater flow.

Water Level Measurement

Groundwater head measurements were collected utilizing a Solinst® 122 Oil/Water Interface Probe (Interface Probe). The Interface Probe can measure depths to water to 0.01 inch. Groundwater was encountered between 21.1 to 21.6 feet bgs at the Site. Water level data is included in Table 1. Figure 6 shows the groundwater flow contour diagram.

4.3 Sample Collection and Chemical Analysis

Sampling performed as part of the field investigation was conducted for all Areas of Concern and also considered other means for bias of sampling based on professional judgment, area history, discolored soil, stressed vegetation, drainage patterns, field instrument measurements, odor, or other field indicators. All media including soil, groundwater and soil vapor have been sampled and evaluated in the RIR. Discrete (grab) samples have been used for final delineation of the nature and extent of contamination and to determine the impact of contaminants on public health and the environment. The sampling performed and presented in this RIR provides sufficient basis for evaluation of remedial action alternatives, establishment of a qualitative human health exposure assessment, and selection of a final remedy.

Soil Sampling

A total of fourteen (14) soil samples were collected for chemical analysis during this RI. One shallow sample and one deeper sample were collected from all of the soil borings. Data on soil sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 2 through Table 5. Figure 5 shows the location of the soil samples collected in this investigation. Laboratories and analytical methods are shown below. Soil samples were collected in pre-cleaned, laboratory supplied glassware, stored in a chilled cooler (4°C) and submitted for analysis. Soil samples were analyzed at New York State Department of Health ELAP-certified laboratories. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and target analyte list (TAL) metals as well as trivalent and hexavalent chromium. All samples were transmitted under proper chain of custody procedures to York Analytical Laboratories, a State-certified (ELAP) laboratory for confirmatory laboratory analyses.

Groundwater Sampling

The three (3) on-site groundwater monitoring wells were gauged for groundwater and/or free product levels. One (1) groundwater sample was collected from each of the three (3) on-site monitoring wells; additionally one (1) trip blank and one (1) field blank were collected during this RI.

Representative groundwater samples from the groundwater monitoring wells were collected utilizing low-flow purging and sampling methods. The groundwater monitoring well was purged until water quality parameters, such as turbidity, conductivity, pH, and dissolved oxygen, were stabilized (10 percent variations or less) over three consecutive measurements while draw-down during purging is kept to a minimum (0.3 feet or less). Data on groundwater sample collection for chemical analyses, including dates of collection and sample depths, is reported in Table 6 through Table 10. Figure 5 shows the location of groundwater sampling. Laboratories and analytical methods are shown below. Groundwater samples were placed into laboratory-supplied glassware, immediately stored in an ice-filled cooler, and delivered with a chain-of-custody documentation to an ELAP certified and accredited laboratory. The groundwater sample collected during the RI was analyzed for TCL VOCs, TCL SVOCs, pesticides, PCBs, dissolved and total TAL metals, chromium hexavalent and chromium trivalent.

Soil Vapor Sampling

A total of one (1) soil vapor and two (2) sub-slab vapor probes were installed and three (3) vapor samples were collected for chemical analysis during this RI. Sub-slab vapor and soil vapor sampling locations are shown in Figure 5. Sub-slab vapor and soil vapor sample collection data is reported in Table 11. Soil vapor sampling logs are included in Appendix F. Methodologies used for soil vapor assessment conform to the *NYS DOH Final Guidance on Soil Vapor Intrusion, October 2006*.

Chemical Analysis

Chemical analytical work presented in this RIR has been performed in the following manner:

Factor	Description
Quality Assurance Officer	The chemical analytical quality assurance is directed by William

	Silveri.
Chemical Analytical Laboratory	Chemical analytical laboratory(s) used in the RI is NYS ELAP certified and was York Analytical Laboratories.
Chemical Analytical Methods	<p>Soil analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Groundwater analytical methods:</p> <ul style="list-style-type: none"> • TAL Metals by EPA Method 6010C (rev. 2007); • VOCs by EPA Method 8260C (rev. 2006); • SVOCs by EPA Method 8270D (rev. 2007); • Pesticides by EPA Method 8081B (rev. 2000); • PCBs by EPA Method 8082A (rev. 2000); <p>Soil vapor analytical methods:</p> <ul style="list-style-type: none"> • VOCs by TO-15 VOC parameters.

Results of Chemical Analyses

Laboratory data for soil, groundwater and soil vapor are summarized in Table 2 through 11, respectively. Laboratory data deliverables for all samples evaluated in this RIR are provided in digital form in Appendix G through Appendix I.

5.0 ENVIRONMENTAL EVALUATION

5.1 Geological and Hydrogeological Conditions

Stratigraphy

The stratigraphy of the Site, from the surface down, consists of approximately 2 feet of medium to coarse sand with urban fill, underlain by 28 feet of fine to medium sand.

Hydrogeology

A table of water level data for all monitor wells is included in Table 1. The average depth to groundwater is 21.37 feet bgs and the range in depth is 21.1 to 21.6 feet bgs. A map of groundwater level elevations with groundwater contours and inferred flow lines is shown in Figure 6. Groundwater flow is generally west-southwest at the Site.

5.2 Soil Chemistry

Soil/fill samples collected during this RI were compared to 6NYCRR Part 375-6.8 Track 1 Unrestricted Use Soil Cleanup Objectives (SCOs) and Track 2 Restricted Use Restricted-Residential SCOs. Soil results showed that there were no detectable concentrations of PCBs in any of the soil samples. SVOCs were not detected in any of the soil samples above their respective Unrestricted Use SCOs. VOCs were not detected in any of the soil samples above their respective Unrestricted Use SCOs, with the exception of acetone (0.0039 mg/kg) in one soil sample. It should be noted that acetone is a common laboratory contaminant. One pesticide; 4,4'-DDT (0.061 mg/kg) was detected above its respective Unrestricted Use SCO in one shallow (zero to 2 feet) soil samples. Two (2) metals, including lead (max. of 94.9 mg/kg) and zinc (max. of 129 mg/kg) were detected in one shallow (zero to 2 feet) soil sample above their respective Unrestricted Use SCOs. None of these metals exceeded their respective Track 2 Restricted Residential Use SCOs. Overall, the findings were consistent with the observed native material in areas throughout New York City.

Data collected during the RI is sufficient to delineate the vertical and horizontal distribution of contaminants in soil/fill at the Site. A summary table of data for chemical analyses performed on soil samples is included in Table 2 through Table 5. Figure 7 shows the location and posts the values for soil/fill that exceed the 6NYCRR Part 375-6.8 Unrestricted Use SCOs.

5.3 Groundwater Chemistry

Groundwater samples collected during this investigation were compared to NYSDEC 6NYCRR Part 703.5 Groundwater Quality Standards (GQS). Pesticides or PCBs were not detected in any of the groundwater samples above their respective GQS. One VOC, chloroform (max. of 13 µg/L), was detected in all groundwater samples but only exceeded its respective GQS in MW-1. No other VOCs were detected exceeding their respective GQS. Two SVOCs, phenol (max. of 8.25 µg/L) and bis(2-ethylhexyl)phthalate (max. of 7.25 µg/L) were found to exceed their GQS in MW-1 and MW-3, respectively. Several dissolved metals were detected in groundwater samples but only sodium (max. of 65,900 µg/L) exceeded its respective GQS standards all three groundwater samples.

Data collected during the RI is sufficient to delineate the distribution of contaminants in groundwater at the Site. A summary table of data for chemical analyses performed on groundwater samples is included in Table 6 through Table 10. Exceedances of applicable groundwater standards are shown.

Figure 8 shows the location and posts the values for groundwater that exceed the New York State 6NYCRR Part 703.5 Class GA groundwater standards.

5.4 Soil Vapor Chemistry

Sub-slab vapor and soil vapor samples collected during the RI were compared to the compounds listed in Vapor Intrusion Matrices in the New York State Department of Health (NYSDOH) Final Guidance for Evaluating Soil Vapor Intrusion, dated October 2006. The sub-slab vapor and soil vapor results indicated elevated levels of petroleum related compounds in all of the samples, including BTEX (max. 1,960 µg/m³). Chlorinated VOCs were detected at moderate concentrations in all of the samples. 1,1,1-trichloroethane (TCA) or carbon tetrachloride were not detected in any of the sub-slab vapor or soil vapor samples. Tetrachloroethylene (PCE) was detected in all three samples with a maximum concentration of 280 µg/m³. Trichloroethylene (TCE) was detected in all three samples with a maximum concentration of 110 µg/m³. Since the soil and groundwater sample results showed no detections of PCE and TCE in all of the soil samples, the PCE and TCE in soil vapor is thought to come from an off-Site source.

Data collected during the RI is sufficient to delineate the distribution of contaminants in soil vapor at the Site. A summary table of data for chemical analyses performed on soil vapor samples is included in Table 11.

Figure 9 shows the location and posts the values for soil vapor samples with detected concentrations.

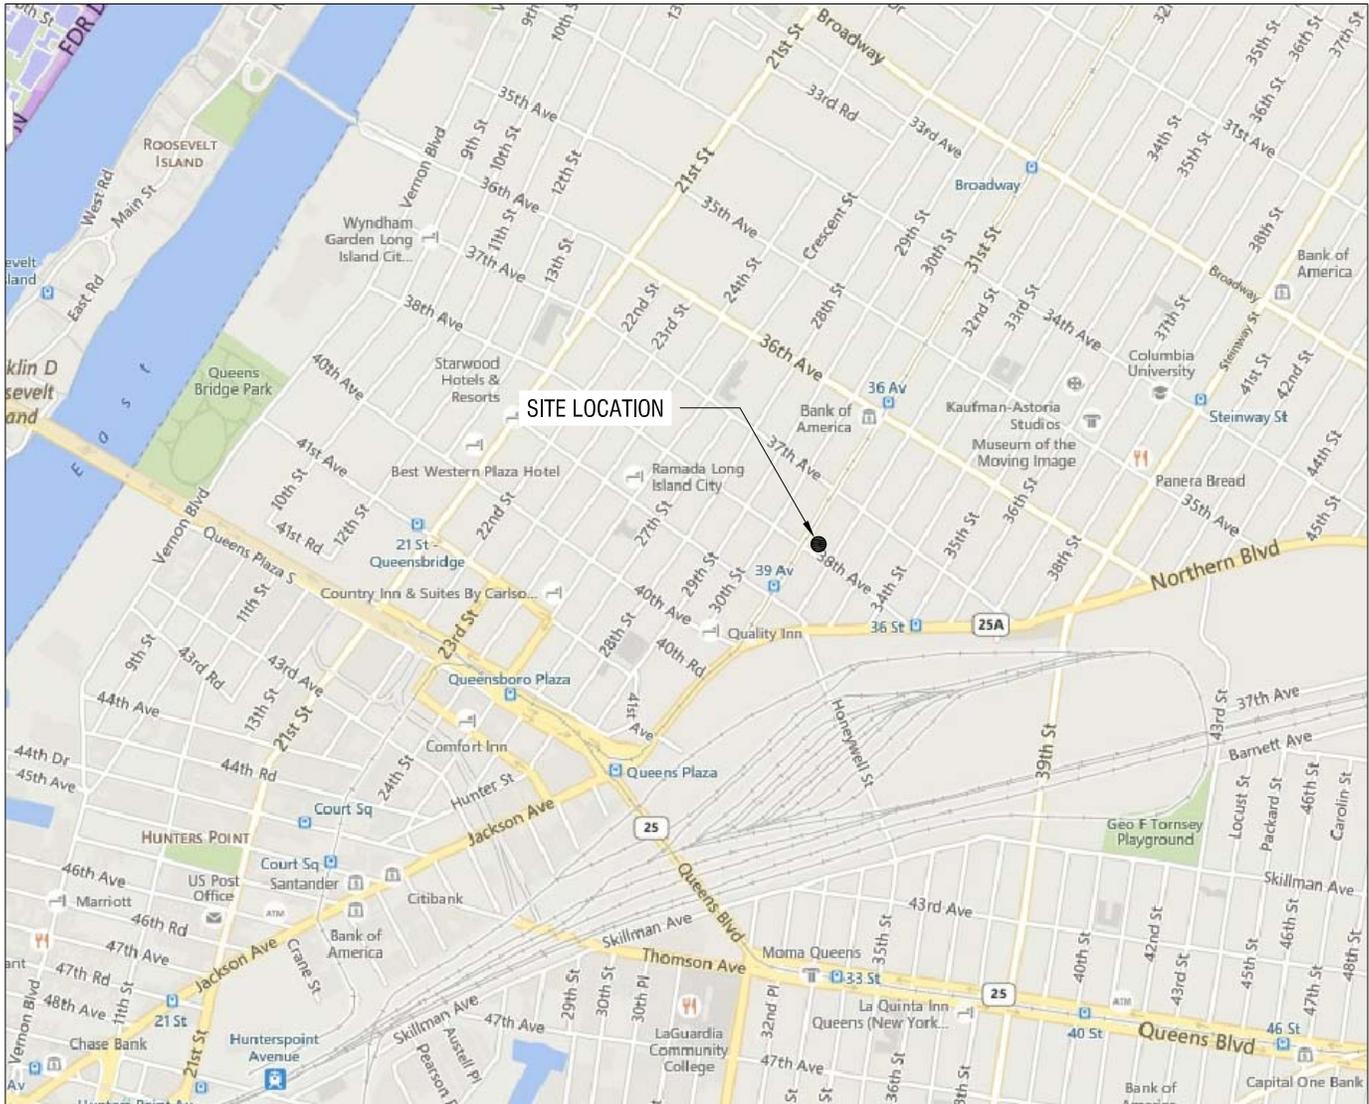

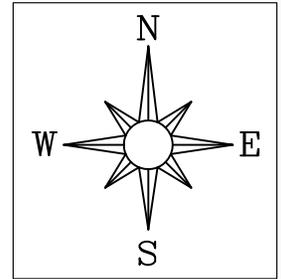

5.5 Prior Activity

Based on an evaluation of the data and information from the RIR, disposal of significant amounts of hazardous waste is not suspected at this site.

5.6 Impediments to Remedial Action

There are no known impediments to remedial action at this property.

Legend
mg/kg - milligrams per kilograms
NC - No criterion for evaluation of analytical parameter
ND - Analyte not detected at or above the indicated (reporting limit, method detection limit)
J - Analyte detected at or above the method detection limit (MDL)
D=result is from an analysis that required a dilution

Bolded values exceed the Part 375 Unrestricted Use Soil Cleanup Objectives
Bolded and gray shaded values exceed the Part 375 Restricted Use - Restricted Residential Soil Cleanup Objectives

Legend

mg/kg - milligrams per kilograms

NC - No criterion for evaluation of analytical parameter

ND - Analyte not detected at or above the indicated (reporting limit, method detection limit)

J - Analyte detected at or above the method detection limit (MDL)

D=result is from an analysis that required a dilution

Bolded values exceed the Part 375 Unrestricted Use Soil Cleanup Objectives

Bolded and gray shaded values exceed the Part 375 Restricted Use - Restricted Residential Soil Cleanup Objectives

Notes

1. Evaluation criteria for soil sample results is the NYSDEC Part 375 Value for Unrestricted Use Soil Cleanup Objective and Restricted Use - Restricted Residential SCOs

Comments:

Nova Geophysical & Environmental Services (NOVA) has performed this Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E 1527-05. This Phase I Environmental Site Assessment (ESA) has identified following *recognized environmental conditions* at the site:

- Based on a review of the Sanborn fire insurance maps, the City Directories and the historical usage of the site and surrounding area as automobile repair filling stations, repair stations, and painting stations since at least 1939, the historical usage of the site and surrounding area may represent a recognized environmental condition for the site.
- The subject site is identified as an E-designated Site with E-Number 218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation by the New York City Department of Environmental Protection (NYC DEP).

NOVA's Phase I Environmental Site Assessment (ESA) has identified *recognized environmental conditions* at the site and recommends the following:

- According to the historical Sanborn fire insurance maps, six (6) gasoline storage tanks were identified on the property. Three (3) of these tanks were located along 31st Street and three (3) along 38th Avenue. The regulatory database, noted that two (2) 550-gallon underground storage tanks had been removed from the site in December of 1969. However, there are no indications of whether these tanks have been removed or abandoned in-place. Therefore, NOVA recommends that a Geophysical Engineering surveys (GES) of the site be conducted in order to determine if any additional tanks, other than the two (2) 2,000-gallon registered USTs, exist at the Site. Should additional tanks be found at the Site, NOVA recommends that they should be closed and/or removed in accordance with all local, State, and Federal regulations.
- NOVA recommends that subslab soil vapor sampling be conducted at the site in order to determine if the air quality at the site has been compromised. This sampling should be done in accordance with the New York Department of Health Indoor Air Sampling and Analysis Guidance.
- Based on the E-218 designation of the Site, NOVA recommends that all work on the site to be conducted in accordance with CEQR standards and the corresponding City agencies.
- NOVA recommends that a Phase II Environmental Site Assessment Report be prepared in accordance with the New York City Department of Environmental Protection to investigate the potential of recognized environmental conditions at the site due to the sites and surrounding areas current and historical usage. This report should also be conducted in accordance with CEQR standards as per the E-218 designation that has been placed on the site due to it current usage as a gasoline station.

EXECUTIVE SUMMARY

NOVA Geophysical & Environmental Services (NOVA) performed a Phase I Environmental Assessment (ESA) of a gasoline service station located at the main address of 31-05 and 31-07 38th Avenue and 37-33 31st Street, in Long Island City, Queens, New York. This site has the following alternative addresses:

31-01 to 31-07 38th Avenue
37-33 to 37-35 31st Street
37-41 31st Street
31-39 38th Avenue
37-37 to 37-39 31st Street

The property consists of a 13,865 SF lot identified as Block 373, Lot 1 in the Long Island City section of Queens, New York. This site consists of three buildings, identified throughout the report collectively as “the subject site” or “the site.” In addition, the areas of the site are identified as the following:

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street:

Developed with a one-story commercial building with approximately 2,000SF of space, which has been occupied by a metal works company for the past five years.

Unit 2

Z.A. & D Service & Gasoline Station

Located at 31-05 38th Avenue:

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station. The site building consists of approximately 2,000SF of space and the paved parking area that houses the gasoline underground storage tanks (USTs), pump islands, and parking lot consists of approximately 5,000SF of space.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue:

This part of the site is developed with a one-story commercial building that has approximately 6,000SF of space that is used as an auto-body shop with an associated auto painting area and.

The main objective of the ESA was to identify the presence or likely presence, use, or release on the Site of hazardous substances or petroleum products as defined in ASTM Practice E 1527-05 as a *recognized environmental condition*. Below is a summary of the findings and conclusions of this report:

A review of the regulatory databases indicated that the Site is listed within state or local regulatory listings as a UST and AST facility for the address 31-05 38th Avenue and a FINDS, RCRA-NonGen, MANIFEST, US AIRS, and E-designation facility for the 37-33 31st Street address.

UST Listing

According to the regulatory database report, the facility located at 31-05 38th Avenue and identified as ZA & D Service Station is a registered UST facility. According to the report, this facility is an active facility that has two operational tanks that are 2,000 each. In addition to these in service tanks, two 550-gallon underground storage tanks were closed and removed from the site in December of 1969. There are no leaks or spills associated with these tanks.

AST Listing

According to the regulatory database report, the facility located at 31-05 and 07 38th Avenue and identified as ZA & D Service Station is a registered AST facility. According to the report, these facilities are active facilities that each building has one operational 275-gallon aboveground storage tank (AST) that is being used as waste oil storage and fuel oil storage. There are no leaks or spills associated with this tank, and therefore, it does not represent a recognized environmental condition for the site.

The Universal Auto Body & Radiator Repair listing located at 31-05 38th Avenue is listed as a FINDS, RCRA-NonGen, MANIFEST, and US AIRS facility. According to the regulatory database, this unit on the subject site does not presently generate any hazardous waste, is in compliance with all procedural requirements, has all manifest copies completed, and does not represent a recognized environmental condition for the site.

E-Designation

The subject site is identified as an E-designated Site with E-Number 218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation. Based on this information, all work at the site should be conducted in compliance with the site E-designation and in compliance with the New York City Department of Environmental Protection (NYCDEP).

Based on a review of the Sanborn fire insurance maps, and the historical usage of the site and surrounding area as automobile repair filling stations, repair stations, and painting stations, the historical usage of the site and surrounding area represent a recognized environmental condition for the site.

A review of the City Directories indicated that the Site has been used for automobile repair and gasoline filling station purposes since at least 1939. Based on this information, NOVA concludes that this represent a recognized environmental condition for the site.

NOVA observed the storage of hazardous substance (petroleum, paint and etc.) within unit 2 and 3 of the subject site. These units are currently used for automobile repair and automobile painting. The storage of these materials is within storage spaces, closets, and demarcated canisters and do not represent a recognized environmental conditions.

The following fuel oil storage tanks have been found at the site:

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue:

Contains a 275-gallon AST for waste oil. This unit contains has two (2) electric lifts and as well as two (2) former and current hydraulic lifts with associated subsurface hydraulic tanks. The yard contains two 2,000-gallon gasoline USTs with associated vent pipes and one-electric lift observed within the parking lot.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue:

This unit has a painting area with oven, which is fueled by a 275-gallon AST.

A review of the Certificate of Occupancies for the Site indicate that it has been used for produce storage, a one-family dwelling, gas station, automobile repair shop, lubrication facility, auto wash station, and repair facility.

A review of the surrounding properties revealed six (6) RCRIS-CESQG/LQG facility listings, total of forty-two (42) LTANK facility listings, twenty-six (26) registered UST facility listings, and seven (7) NY Spills facility listings identified within the specified search distances. However, based on their current regulatory status, NOVA concludes that none of these facilities represent an environmental concern for the Site.

NOVA conducted a limited survey of the Site for suspect friable and non friable ACM. Based on this limited survey, NOVA did not identify any suspect friable ACM associated with the on-site structures. However, since the asbestos survey was limited, and NOVA was unable to gain access to the kiosk, it is possible that friable and/or non-friable ACM may exist at the Site that was not observed by NOVA during the Site visit (i.e., wall voids, ceiling cavities, beneath carpets). Should any suspect ACM is identified at a later date, the suspect ACM should be addressed as ACM, in accordance with applicable local, state, and federal regulations, until sampling and analysis indicate otherwise.

Based on the age of the building, it is possible that lead based paint may exist on the site. However, the painted surfaces at the Site were in good condition at the time of the site visit.

1.0 INTRODUCTION

On March 11, 2013, NOVA conducted a Phase I Environmental Site Assessment (ESA) of the commercial property with three (3) units that contained auto-body shop, auto service and gasoline station and a metal workshop. This property is located at 31-05 and 31-07 38th Avenue and 37-33 31st Street, in Long Island City, Queens, New York, hereinafter referred to as “the Site”. This assessment was conducted in substantial compliance with the American Society for Testing and Materials (ASTM) Practice Designation E1527-05: *Standard Practice for ESAs: Phase I ESA Process*.

1.1 Purpose

The purpose of this ESA was to identify *recognized environmental conditions* in connection with the Site at the time of the site reconnaissance.

1.2 Scope-of-Services

This Phase I ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Standard Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this report. In accordance with the above-referenced agreement, NOVA performed walk-through observations of the Site, noted the use of adjacent properties, and conducted a search of readily available historical and regulatory records. More specifically, the scope of services included the following:

- **Site and Adjacent Property Observations**

Visual observations of the site, structures, and surrounding properties were made to identify potential sources or indications of chemical and/or petroleum impacts such as underground storage tanks (USTs), aboveground storage tanks (ASTs), potential sources of polychlorinated biphenyls (PCBs), chemicals and hazardous materials, and areas with surface stains or distressed vegetation. In addition, the immediately adjacent properties were observed, without being entered, for possible sources of impacts or environmental impairment that could migrate to the site via surface water runoff, groundwater transport, or other pathways.

- **Geological Information**

Published geological and groundwater information for the site was obtained from the EDR.

- **Historical Review**

Reviews of historical Sanborn fire insurance maps (Sanborn maps), for the site and adjacent properties were conducted to evaluate previous land use.

- **Federal and State Regulatory Review**

The following regulatory databases were reviewed to identify use, generation, storage, treatment, or disposal of hazardous materials, or releases of such materials that may impact the Site: United States Environmental Protection Agency's (USEPA) National Priorities List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Resource Conservation and Recovery Information System-Treatment, Storage, and Disposal facilities (RCRIS-TSD) and Corrective Action Facilities (CORRACTS); RCRIS-Large Quantity Generators (RCRIS-LQG); RCRIS-Small Quantity Generators (RCRIS-SQG); Emergency Response Notification System

(ERNS); Permitted Solid Waste/Inventory Facilities (SWF), Leaking Underground Storage Tank (LTANK); Registered Underground Storage Tank (UST); and State Superfund Registry (SHWS).

- **Interviews**

Interviews were conducted with persons familiar with the site regarding possible past or present use of potentially hazardous materials at the site, and other issues of potential interest relative to potential environmental conditions.

- **Prior Environmental Reports**

A Limited Subsurface Investigation report dated January 12, 2012 was provided for review.

Please note that the scope of work for this Phase I ESA does NOT include collection of samples or materials for testing, including testing of soil or groundwater, lead-based paint, lead in drinking water, asbestos containing material (ACM), etc.

1.3 Assumptions, Limitations and Exceptions

NOVA has prepared this Phase I Environmental Site Assessment using reasonable efforts in each phase of its work to identify *recognized environmental conditions* associated with hazardous substances or petroleum products at the Site. The scope-of-work for this Phase I ESA was consistent with the ASTM Practice E 1527-05. Findings within this report are based on information collected from observations made on the day of the site investigation and from reasonably ascertainable information obtained from governing public agencies and referenced sources.

NOVA's professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This statement is in lieu of other statements either expressed or implied. NOVA is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site observations, field exploration, and laboratory test data presented in this report.

This report is intended for the sole use of the Client. It should be noted that environmental evaluations are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and Site evaluations. For these types of evaluations, it is often necessary to use information prepared by others, and NOVA cannot be responsible for the accuracy of such information. Additionally, the passage of time may result in a change in the environmental characteristics at this Site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

Subsurface conditions were not field investigated, as this was outside the scope of this study, and may differ from the conditions implied by the surficial observations. This study is not intended to assess or otherwise determine if soil impacts, waste emplacement, or groundwater impacts exist. These data are accessible only by subsurface material and groundwater sampling through the completion of soil borings

and the installation of monitoring wells. The scope of work, in accordance with our agreement, did not include these activities.

It must be noted that no evaluation, no matter how thorough, can absolutely rule out the existence of hazardous materials at a given Site. This assessment has been based on prior Site history and observable conditions. Although the results of this study suggest that hazardous materials are unlikely to exist at the Site and that no further study is needed, existing hazardous materials and hazardous substances can escape detection using these methods. Therefore, if a higher level of confidence is required than can be defined by the Phase I scope of work, additional evaluation would, of course, be required.

Our conclusions regarding the potential environmental impact of nearby, off-site facilities on the Site are based on readily available information from the environmental databases listed and the assumed groundwater flow direction. A detailed file review of each facility was beyond the scope of work. Actual groundwater conditions, including direction of flow, can only be determined through the installation of monitoring wells.

NOVA does not warrant the correctness, completeness, currentness, merchantability, or fitness of any information related to records review provided in this report. Such information is not the product of an independent review conducted by NOVA, but is only publicly available environmental information maintained by federal, state, and local government agencies.

Deviations from ASTM Standard Practice E 1527-05 are listed as follows:

- File searches of the New York State Department of Environmental Conservation (NYSDEC) and U.S. Environmental Protection Agency (USEPA) records requires a written Freedom of Information Act (FOIA) request to obtain access to screen for the presence of, and gain access to, environmental records. Such information was deemed not to be reasonably ascertainable within the time constraints of this Phase I ESA.

1.4 Special Terms and Conditions (User Reliance)

This report may be relied upon by the undersigned or by any purchaser or assignee. In addition, the report may be relied upon by any rating agency involved in rating securities secured by, or representing an interest in, the Property Note. This report may be used in connection with materials offering for sale the Property Note, or an interest in the Property Note, and in presentations to any rating agency. With respect to the foregoing, the report speaks only as of the origination date of the report unless specifically updated through a supplemental report.

NOVA makes no other representation to any third party except that it has used the degree of care and skill ordinarily exercised by environmental consultants in the preparation of the report and in the assembling of data and information related thereto. No other warranties are made to any third party, either express or implied. NOVA's liability to any third party authorized to use or rely on this report with respect to any acts or omissions shall be limited to a maximum of no more than our contract price.

2.0 SITE DESCRIPTION

2.1 Location and Description

The property consists of a 13,865 SF lot identified as Block 373, Lot 1 in the Long Island City section of Queens, New York. This site consists of three buildings and a paved lot, identified throughout the report collectively as “the subject site” or “the site.” In addition, the areas of the site are identified as the following:

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street

Developed with a one-story commercial building with approximately 2,000SF of space, which has been occupied by a metal works facility for the past five years.

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station and pump station. The site building consists of approximately 2,000SF of space and the paved area that houses the gasoline underground storage tanks, pump islands, and parking lot consists of approximately 5,000SF of space.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This part of the site is developed with a one-story commercial building that has approximately 6,000SF of space that is used as an auto-body shop with has an associated pain area and oven.

The City of New York’s Assessor’s Office denotes the Site as Block 373, and Lot 1. The Site location is shown on Figure 1 - Site Location Map.

2.2 Surrounding Area General Characteristics

The Site is located within the Long Island City section of Queens, New York. The subject property is located in an area predominantly characterized with residential, parking, commercial, institutional, industrial, and transportation/utilities facilities. A map depicting the land use in the area can be seen in Figure 2- Area Map.

2.3 Current Use of the Site

This site consists of three buildings used as a gas and service station, an auto-body shop and a metal works facility.

2.4 Description of Site Improvements

The property consists of a 13,865 SF lot identified as Block 373, Lot 1 in the Long Island City section of Queens, New York. This site consists of three buildings, identified throughout the report collectively as “the subject site” or “the site.” In addition, the areas of the site are identified as the following:

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street

Developed with a one-story commercial building with approximately 2,000SF of space, which has been occupied by a metal workshop for the past five (5) years. The building also contains an office area and a bathroom.

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station and pump station. The site building consists of approximately 2,000SF of space and the paved area that houses the gasoline underground storage tanks (USTs), pump islands, an electric lift and parking lot consists of approximately 5,000SF of space. This building also contains a storage area (for unused oils, car parts, etc.) and a bathroom

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This part of the site is developed with a one-story commercial building that has approximately 6,000SF of space that is used as an auto-body shop with an associated painting area with oven, a paint storage area, a compressor room and an office.

5.2.1 Surface Observations

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street

This unit on the property is a one-story brick building that is heated by ceiling mounted gas fired units. The building is composed of office space, and a bathroom.

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station and pump station. Within the building is an office space and a storage area for new oil and

other automobile repair products. The building is heated with two (2) gas-fired ceiling mounted units and contains a 275-gallon AST for waste oil. This unit contains two (2) electric lifts and as well as two (2) former and current hydraulic lifts. The yard contains two 2,000-gallon gasoline USTs. With two fuel pumps with two (2) vent pipes and an electrical lift observed within the parking lot.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This part of the site is developed with a one-story brick building that is heated by two (2) ceiling mounted gas fired units. This unit has a painting area with oven, which is fueled by a 275-gallon AST. It has a paint storage area, a compressor room, an office and a bathroom. This building also contains a compressor.

Municipal water, electricity, gas, telephone and cable are provided to the subject property, and the Site is serviced by New York City municipal sanitary system.

2.5 Current Use of Adjoining Properties

The subject site is bordered to the east by a one-story commercial building identified as a glasswork facility. The adjacent property to the west on the northwest corner of 38th Avenue and 31st Street is a one-story commercial building. The adjacent property to the south across 38th Avenue, on the southeast corner of 38th Avenue and 31st Street, is a two-story mixed-use building with a sushi restaurant on the first floor and residential on the second. The adjacent property to the north along 31st Street is a one-story commercial building identified as a metal company.

3.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by personal communication with the occupants or workers in the building with regard to the Phase I ESA.

3.1 Title Records

The Site contact, Mr. Nick Koulizakis, provided no title records information.

3.2 Environmental Liens or Activity and Use Limitations

The Site contacts provided no information regarding property environmental liens or activity and use limitations. The search of the New York City Building Department records indicated that there are no environmental liens or activities or limiting uses performed at the Site.

3.3 Specialized Knowledge

Nova was not provided with any specialized knowledge regarding recognized environmental conditions associated with the Site.

3.4 Valuation Reduction for Environmental Issues

No information regarding valuation reduction for environmental issues associated with the Site was provided to Nova.

4.0 RECORDS REVIEW

A. PHYSICAL SETTING SOURCES

4.1.1 TOPOGRAPHY

According to the USGS Quadrangle Central Park, NY NJ Topographic Maps, the elevation of the Site is approximately 37 feet above mean sea level.

4.1.2 Soils

The soils in the area of the Site are classified as disturbed Urban Land. Urban Land refers to soils that have been altered by urban development such as buildings and streets, where at least 50 percent of the surface is covered with asphalt, concrete or other impervious building material. Typically, these soils have not been mixed with other materials, and characteristics can only be determined by on-site subsurface investigation.

4.1.3 Geology

According to the US Department of Agriculture (USDA) Soil Conservation Service (SCS) data STATSGO the following is the dominant soil composition of the target property:

<u>Era:</u>	Mezozoic	<u>System:</u>	Cretaceous
<u>Series:</u>	Upper Cretaceous	<u>Category:</u>	Stratified Sequence

Surface soils in the area can be characterized by silt loam, loamy sand, sandy loam, and fine sandy loam. Shallow soil can include sandy loam. Deeper soil can include unweathered bedrock, very gravelly-loamy sand, and sandy loam.

4.1.4 Hydrology

Groundwater beneath the Site area is unknown. The movement and direction of groundwater flow is influenced by many factors including, but not limited to, the aquifer's hydraulic characteristics, surface and bedrock topography, the presence of surface water bodies and the influence of pumping wells. Preliminary estimates of groundwater flow direction usually consider surface topography and the presence of nearby surface water bodies.

Local groundwater depth and flow direction can be influenced by additional factors (e.g., underground structures, seasonal fluctuations, soil and bedrock geology, and production wells), which are beyond the scope of this investigation. Groundwater flow direction in Queens County, New York is not available.

4.1.5 Flood Zones

According to a regulatory agency database obtained from EDR, Inc. (EDR), which included a review of the Flood Insurance Rate Maps (FIRMS) with the Federal Emergency Management Agency (FEMA) for Manhattan (New York) County, New York, the Site is not located within a 100 or 500 years flood zone.

4.2 Standard Environmental Records

A review of databases and files from federal, state and local environmental regulatory agencies was conducted to identify use, generation, storage, treatment or disposal of hazardous materials and chemicals, or release incidents of such materials, that may impact the site. EDR provided the federal and state environmental database information to NOVA.

The potential for the facilities identified by the database review to environmentally impact the site was evaluated solely on the distance and presumed topographic orientation (with respect to groundwater flow) of each facility relative to the site. Furthermore, each facility's presumed topographic orientation was determined solely by a review of available USGS quadrangle topographic maps. No attempt was made to verify the actual groundwater flow or to access regulatory agency files regarding the identified facilities, as this was beyond the scope of work for this project.

Federal, state, and local database records were reviewed for the Site and those properties surrounding the Site. Information on the improper storage, handling, and/or disposal of hazardous substances, wastes, or petroleum products, on or adjacent to the Site, is provided within these records. Following is a summary of the listings identified within applicable search radius.

Federal List	Surrounding Area Search Radius	No. of Sites Within Search Radius
National Priorities List (NPL or Federal Superfund Listing)	1 mile	0
Proposed NPL	1 mile	0
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)	½ mile	0
CERCLIS-NFRAP (No Further Remedial Action Planned)	¼ mile	0
RCRIS Corrective Action Reports (CORRACTS)	1 mile	1
Resource Conservation and Recovery Information System – Treatment, Storage or Disposal Facilities (RCRIS-TSD)	½ mile	0
RCRA registered large quantity generators of hazardous waste (LQG)	¼ mile	2
RCRA registered small quantity generators of hazardous waste (SQG)	¼ mile	4
NY State and Brownfield Voluntary Cleanup Program	Site	No

PHASE I ENVIRONMENTAL SITE ASSESSMENT
COMMERCIAL PROPERTY
31-05 & 31-07 38TH AVENUE AND 37-33 31ST STREET, QUEENS, NEW YORK 11101

Federal List	Surrounding Area Search Radius	No. of Sites Within Search Radius
(VCP)		
State List	Surrounding Area Search Radius	No. of Sites Within Search Radius
State Hazardous Waste Site (SHWS)	1 mile	5
State Landfill	1 mile	1
Leaking Storage Tank Incident Reports (LTANKS)	½ mile	42
Registered Underground Storage Tanks (USTs)	¼ mile	26
Drycleaners	¼	0
NY Spills	½ mile	7

TARGET PROPERTY

A review of the regulatory databases indicated that the Site is listed within state or local regulatory listings as a UST and AST facility for the address 31-05 38th Avenue and a FINDS, RCRA-NonGen, MANIFEST, US AIRS, and E-designation facility for the 37-33 31st Street address.

UST Listing

According to the regulatory database report, the facility located at 31-05 38th Avenue and identified as ZA & D Service Station is a registered UST facility. According to the report, this facility is an active facility that has two operational tanks that are 2,000 each. In addition to these in service tanks, two 550-gallon underground storage tanks were closed and removed from the site in December of 1969. There are no leaks or spills associated with these tanks. However, based on the age and date of the tank removed, it is possible residual contamination still exists on the site.

AST Listing

According to the regulatory database report, the facility located at 31-05 38th Avenue and identified as ZA & D Service Station is a registered AST facility. According to the report, this facility is an active facility that has one operational 275-gallon aboveground storage tank. There are no leaks or spills associated with this tank, and therefore, it does not represent a recognized environmental condition for the site.

The Universal Auto Body & Radiator Repair listing located at 31-05 38th Avenue is listed as a FINDS, RCRA-NonGen, MANIFEST, and US AIRS facility. According to the regulatory database, this unit on the subject site does not presently generate any hazardous waste, is in compliance with all procedural requirements, has all manifest copies completed, and does not represent a recognized environmental condition for the site.

E-Designation

The subject site is identified as an E-designated Site with E-Number 218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation. Based on this information, all work at the site

should be conducted in compliance with the site E-designation and in compliance with the New York City Department of Environmental Protection.

4.2.1 FEDERAL FINDINGS

National Priorities List (NPL)

The National Priority List is an Environmental Protection Agency (EPA) compilation pursuant to CERCLA 42 USC 9605 (a)(8)(B) of properties with the highest priority of cleanup pursuant to EPA's Hazard Ranking System.

Findings: Neither the Site nor other properties within a one-mile radius.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) List

The CERCLIS List is a compilation of known and suspected uncontrolled or abandoned hazardous waste sites which are, or were, under investigation by USEPA but have not been elevated to the status of a Superfund (NPL) site.

Findings: There are no sites listed as CERCLIS facility.

Resource Conservation and Recovery Information System (RCRIS)

The Resource Conservation and Recovery Act (RCRA) program identifies and tracks hazardous wastes from the point of generation to the point of disposal. The RCRIS database tracks those facilities that treat, store, and/or dispose of hazardous materials as defined by RCRA (referred to as TSD facilities). The RCRIS CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. The RCRIS Generators database tracks large and small quantity generators of hazardous waste. The RCRA Administrative Action Tracking System (RAATS) database, which maintains records of enforcement actions issued under RCRA for major violators, is included in the regulatory research report.

Findings: There are four (4) small and two (2) large quantity generators (RCRIS-SQG/LQG) located within 0.25 miles of the site. Based on their distance and their current status with no reported violations, none of these locations represent a recognized environmental condition for the Site.

Emergency Response Notification System (ERNS)

The ERNS list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR Parts 302 & 355.

Findings: Site not listed

4.2.2 STATE LISTS FINDINGS

State Hazardous Waste Sites (SHWS)

SHWS are known or inactive contaminated sites in New York and are classified as sites with contaminants present at levels, which exceed the applicable cleanup criteria for groundwater and/or soil standards.

Findings: Site is not listed. There are five (5) SHWS facilities located within 1 mile of the site. Based on distance, hydraulic downgradient position from the site, and/or current status these facilities do not considered a recognized environmental condition for the Site.

Solid Waste Facilities/Landfill Sites (SWF/LF)

The SWF/LF typically contains an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Conservation.

Findings: There is one (1) SHWS facilities located within one (1) mile radius of the site. Based on distance, hydraulic downgradient position from the site, and current status this facility does not considered a recognized environmental condition for the Site.

Leaking Storage Tank Incident Reports (LTANKS)

The LUST Incident reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection.

Findings: There are forty-two (42) LTANKS sites identified within 0.5 miles of the site plus the site LTANKS listing. All of these spills have been granted a “Closed” regulatory status with the New York State Department of Environmental Conservation, and therefore do not represent a recognized environmental condition for the Site.

Underground Storage Tanks (USTs)

The UST database contains registered USTs. These USTs are regulated under Subtitle I of the RCRA. The data come from the Department of Environmental Protection UST Data.

Findings: There are twenty-six (26) UST facility sites that contain petroleum products, identified within 0.25 mile of the Site. Due to their current regulatory status, no historical or current violations and/or spills, none of these facilities represent a recognized environmental condition for the Site.

Registered Recycling Facility List (SWRCY)

The data come from the Department of Environmental Conservation.

Findings: No findings reported within 1.0 mile of the site.

NY Spills, Dry Cleaners and VCP

Data collected on spills reported to NYS DEC.

Findings: There are a total of seven (7) NY Spills sites identified within the 0.25 miles of the Site. All of these spills have been granted a “Closed” regulatory status with the New York State Department of Environmental Conservation, and therefore do not represent a recognized environmental condition for the Site.

4.3 Historical Use Information

According to information obtained from the New York City Department of Finance, the Site is currently owned by L & EP Realty Corp.

According to aerial photographs, city directories and available property records, the Site was developed between 1888 and 1976 with the existing residential and commercial building. The following summarizes the findings of the research presented below pertaining to historical Site and surrounding area uses.

4.3.1 Property Tax Files

NOVA reviewed available records of the New York City’s Building Departments and Assessor’s office within the Queens County. According to their files, the Site is listed as Block 373 and Lot 1.

4.3.2 Land Title Records

The acquisition of land title records was not required by the scope of work for the ESA.

4.3.3 Historical USGS Topographic Quadrangles

Insofar as adequate historical information was obtained from EDR report. The historical topographic maps were included within the Appendix. According to these maps, there appear to be no recognized environmental conditions associated with the Site.

4.3.4 City Directories

City directories for the Site and surrounding area were obtained from EDR were reviewed as part of this assessment. City Directories were reviewed relative to the Site area for years spanning 1922 to 2012 in approximate 5-year intervals. The review of city directories identified that the Site and surrounding properties have been occupied by commercial, manufacturing, and mixed-use properties. EDR's City Directory Abstract is included in Appendix E and summarized below:

37-33 31st Street

1950-1970: pisacano Chas & Co Inc Whole Produce

1983: Peak Servive

1991: Three K Cabinets

2000: Tocton

2005-2007: Heer Metal Works Inc

37-35 31st Street

1939: Paramount Auto Body & Fender Works

31-05 38th Avenue

1962: AC Auto Glass Co

1967-1983: Universal Service Station
A OK Lease A Truck

1991: Maurice Auto Repair

2000-2012: ZAD Service Station

The surrounding area is characterized by residential, manufacturing, commercial properties including automobile painting, repair, and servicing, and mixed-used residential and retail properties.

A review of the City Directories indicated that the Site has been used for automobile repair and gasoline filling station purposes since at least 1939. Based on this information, NOVA concludes that this represent a recognized environmental condition for the site.

4.3.5 Sanborn Fire Insurance Maps

Historical Sanborn Fire Insurance Maps for the Site and surrounding area were obtained from EDR were reviewed as part of this assessment. Sanborn maps dated 1898, 1915, 1947, 1950, 1970, 1977, 1979, 1980, 1985, 1986, 1988-1996, and 2001-2006 were reviewed relative to the Site and surrounding properties.

Nova's review of EDR's historical Sanborn Fire Insurance Maps for the site and adjacent properties revealed that they have been used for commercial and manufacturing purposes uses including automobile repairs, painting, and services stations.

Based on a review of the Sanborn Maps, the site and the surrounding area represent a recognized environmental condition for the site. EDR's Historical Sanborn Fire Insurance Maps are included in Appendix F and summarized below:

1898:

The site is depicted as vacant land.

The adjacent properties to the north, east, and west are depicted with vacant land. The adjacent property to the south is depicted with a two-story store.

1936:

The site is depicted as a filling station with 6 gas tanks and a 2-story dwelling.

The adjacent property to the east and north (which is the same property) is depicted with an automobile printing building with 12 stalls. The adjacent property to the west is depicted with a filling station with ice storage and auto repair. The adjacent property to the south is depicted with two-story stores.

1947:

The subject site is depicted with a filling station with radiator repairs, a one-story store, and a two-story dwelling.

The adjacent property to the east is depicted with a one-story auto repair and lacquer spray company.

The adjacent property to the north is depicted as a lumberyard storage area. There are no significant changes to the adjacent properties to the south or west.

1950:

There are no significant changes to the subject site with the exception that a portion of the site now has a one-story building labeled "whole produce."

There are no significant changes to the adjacent properties.

1970:

The subject site remains unchanged from the previous map. However, an additional building has been developed and is a one-story building identified as auto repair.

The adjacent property to the west is depicted as a filling station with car wash. The adjacent property to the north is depicted with Gotham Lighting Company. There are no significant changes to the adjacent properties to the south or east.

1977-1979:

There are no significant changes to the subject site.

The adjacent property is now depicted as a auto repair facility. There are no significant changes to the adjacent properties to the south, east, or west.

1980-1989:

There are no significant changes to the subject site.

There are no significant changes to the adjacent properties with the exception that the car wash on the adjacent property to the west is no longer depicted and it is now depicted as a commercial building.

1990:

There are no significant changes to the subject site.

There are no significant changes to the adjacent properties with the exception that the adjacent property to the west is no longer developed with a gas station and is identified as a commercial and warehouse building.

1992-2002:

There are no significant changes to the subject site.

There are no significant changes to the adjacent properties with the exception that the adjacent property to the west is now depicted as an auto repair facility.

2003-2006:

There are no significant changes to the subject site with the exception that the site is no longer identified on the map as a filling station.

There are no significant changes to the adjacent properties.

Based on a review of the Sanborn fire insurance maps, and the historical usage of the site and surrounding area as automobile repair filling stations, repair stations, and painting stations, the historical usage of the site and surrounding area may represent a recognized environmental condition for the site.

4.3.6 Historical Aerial Photographs

Aerial photographs reviewed for the Site were provided by EDR. Aerial photographs dated 1924, 1954, 1966, 1975, 1984, 1994, 2006, 2009, 2010 and 2011 were provided for review and are included in Appendix C.

Due to the dense urban environment a review of the aerial photographs were not considered useful for this assessment.

4.3.7 Zoning/Land Use Records

NOVA attempted to review available historical zoning/land use records for information regarding past uses of the Site and surrounding area. These records indicated that the Site and its surroundings have been zoned for manufacturing and residential use with some commercial overlay usage. A copy of the Zoning Map can be found in Attachment H.

4.3.8 Prior Reports

NOVA was provided with a Limited Subsurface Investigation Report prepared by Core Environmental Consultants (CORE) of Maspeth, New York for the property located at 31-05 38th Avenue portion of the project area, dated January 12, 2012. According to this report, CORE installed three (3) soil borings at the referenced portion of the project site (next to the USTs & Pump Island). No elevated photoionization (PID) readings were observed. Soil samples and a groundwater sample were collected for laboratory analysis. None of the soil & groundwater samples collected for laboratory analysis contained any compounds above the NYSDEC Soil Cleanup Guidance and recommended no further investigation or remedial activities at the project site. (The copy of this report is included within Appendix H.

4.3.9 Interviews

NOVA interviewed Mr. Nick Koulizakis at the time of the Site inspection. He was unaware of any known environmentally sensitive conditions located at the Site.

5.0 SITE RECONNAISSANCE

NOVA's Senior Environmental Engineer, Levent Eskicakit, P.G., E.P., conducted the on-site investigation on March 11, 2013. The Site inspection consisted of a walk throughout the building, and around the perimeter of the Site. Photographs of the Site, as observed during the Site visit, are included in Appendix A.

5.1 Methodology and Limiting Conditions

The Site reconnaissance consisted of visual and/or physical observations of the Site and improvements; adjoining sites as viewed from the Site; and, the surrounding area based on visual observations made during the trip to and from the Site. Unimproved portions of the Site (if any) were observed along the perimeter and in a general grid pattern in safely accessible areas. Building exteriors (if any) were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

5.2 General Site Conditions

The property consists of a 13,865 SF lot identified as Block 373, Lot 1 in the Long Island City section of Queens, New York. This site consists of three buildings, identified throughout the report collectively as "the subject site" or "the site." In addition, the areas of the site are identified as the following:

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street

Developed with a one-story commercial building with approximately 2,000SF of space, which has been occupied by a metal workshop for the past five years.

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station and pump station. The site building consists of approximately 2,000SF of space and the paved area that houses the gasoline underground storage tanks, pump islands, and parking lot consists of approximately 5,000SF of space.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This part of the site is developed with a one-story commercial building that has approximately 6,000SF of space that is used as an auto-body shop with has an associated pain area and oven.

5.2.1 Surface Observations

Unit 1

Heer Metal Works, Inc.

Located at address 37-33 31st Street

This unit on the property is a one-story brick building that is heated by ceiling mounted gas fired units. The building is composed of office space, and a bathroom.

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station and pump station. Within the building is an office space and a storage area for new oil and other automobile repair products. The building is heated with two (2) gas-fired ceiling mounted units and contains a 275-gallon AST for waste oil. This unit contains has two (2) electric lifts and as well as two (2) former and current hydraulic lifts. The yard contains two 2,000-gallon gasoline USTs. With two fuel pumps with two (2) associated vent pipes observed within the parking lot.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This part of the site is developed with a one-story brick building that is heated by two (2) ceiling mounted gas fired units. This unit has a paint area with oven, which is fueled by a 275-gallon AST. It has a paint storage area, an office and a bathroom. It also contains a compressor.

Municipal water, electricity, gas, telephone and cable are provided to the subject property, and the Site is serviced by New York City municipal sanitary system.

All of the surrounding properties are zoned for residential use with some commercial overlays. Based on a review of municipal records, historical Sanborn maps, and city directories, surrounding properties were historically occupied by commercial and residential properties. NOVA did not observe any interior or exterior transformers on Site. NOVA observed no evidence of illegal or improper dumping, staining, or material mismanagement in the property.

During the Site investigation, no visual indications of stressed vegetation or discolored soils were observed on the site. No evidence of potentially hazardous materials or perceivable signs of hazardous material discharges (e.g., stained soil, stressed vegetation, unusual odors) were observed on the Site.

5.3 Hazardous Substance Use/Storage

NOVA observed the storage of hazardous substance within unit 2 and 3 of the subject site. These units are currently used for automobile repair and automobile painting. The storage of these materials is within storage spaces, closets, and demarcated canisters. According to the regulatory database and site inspection, copies of the manifests for these materials are kept onsite.

5.4 Underground and Aboveground Storage Tanks

Unit 2

Z.A. & D Service Station

Located at 31-05 38th Avenue

Contains a 275-gallon AST for waste oil. This unit contains has two (2) electric lifts and as well as two (2) former and current hydraulic lifts with associated hydraulic tanks. The yard contains two 2,000-gallon gasoline USTs with associated vent pipes observed within the parking lot. According to the NYSDEC records these tanks were registered and tightness & corrosion tested in June 2010 and 2012. The copies of these documents were provided within Appendix H

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue

This unit has a paint area with oven, which is fueled by a 275-gallon AST.

5.5 Other Petroleum Products

NOVA observed a variety of automobile related repair related products.

5.6 Polychlorinated Biphenyls (PCBs)

PCBs are toxic coolants or lubricating oils used in some electrical transformers, light ballasts, electrical panels or other similar equipment. NOVA observed two (2) hydraulic lifts within unit 2 of the site. It is possible these lifts contain PCB containing oils.

5.7 Waste Generation, Storage and Disposal

Waste oil is collected on-site in 275-gallon ASTs. This tank did not have any staining around the tank at the time of the site visit. NOVA did not observe any stressed or dead vegetation, stained concrete.

5.8 Septic Systems

The sanitary sewer system is provided by New York City. The Site does not contain an on-site septic system.

5.9 Storm Water Management/Surface Areas

NOVA did not observe any evidence of surface water, surface impoundments, retention ponds, dry wells, or other storm water management systems.

5.10 Wells

NOVA did not observe evidence of production or monitoring wells on the Site.

6.0 INTERVIEWS

6.1 Interview Summary

NOVA interviewed Mr. Nick Koulizakis at the time of the Site inspection. He was unaware of any known environmentally sensitive conditions located at the Site.

Additionally, Nova visited and/or contacted the New York City Building Department and Assessors Office. The Assessors Office provided ownership information. The NYC Building Department records and Assessor's information indicated that the property is designated as an E- 218 designated site.

An (E) designation provides notice of the presence of an environmental requirement pertaining to potential hazardous materials contamination, high ambient noise levels or air emission concerns on a particular tax lot. (E) Designations governed by Section 11-15 (Environmental Requirements) of the Zoning Resolution, are established in connection with a change in zoning or an action pursuant to a provision of the Zoning Resolution that would allow additional development to occur on property, or would permit uses not currently allowed.

The site has been given E-218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation. Based on this information, all work at the site should be conducted in compliance with the site E-designation and in compliance with the New York City Department of Environmental Protection (NCDEP).

A review of the Certificate of Occupancies for the Site indicate that it has been used for produce storage, a one-family dwelling, gas station, automobile repair shop, lubrication facility, auto wash station, and repair facility.

Interviews with other local municipal agency personnel and review of files did not reveal evidence of releases or known contamination on-site or at any facilities in the site vicinity that have not been previously discussed

7.0 NON-ASTM INVESTIGATION ITEMS

7.1 Wetlands

NOVA did not observe any indicators of wetlands at the Site or on adjacent properties. According to wetland data provided by the U.S. Department of the Interior, Fish & Wildlife Service National Wetland Inventory, and indicates that no designated wetlands exist on the Site.

7.2 Suspect Asbestos-Containing Material (ACM)

NOVA conducted a limited survey of the Site for suspect friable and non friable ACM. Based on this limited survey, NOVA did not identify any suspect friable ACM associated with the on-site structures. However, since the asbestos survey was limited, it is possible that friable and/or non-friable ACM may exist at the Site that were not observed by NOVA during the Site visit (i.e., wall voids, ceiling cavities, beneath carpets). Should any suspect ACM is identified at a later date, the suspect ACM should be addressed as ACM, in accordance with applicable local, state, and federal regulations, until sampling and analysis indicate otherwise.

7.3 Radon

The USEPA defines radon as a colorless, odorless, radioactive gas that comes from the natural decay of uranium that is found in nearly all soils. It typically moves through the ground to the air above and into homes and other buildings through cracks and openings in the foundation.

The New York State Department of Health maintains a database of radon test results on a local and county level. According to the EDR database, the subject property is located in an EPA Radon Zone 3, which is characterized by average radon levels less than 2 pCi/L. The EPA action level is 4 pCi/L. The average radon level of 81 locations sampled within New York (Queens) County in the basement was 0.97 pCi/L and 0.62 pCi/L for living rooms. Based on the radon test results and the radon zone designation at the Site, radon is not considered to be of environmental concern to the Site. NOVA did not perform testing for radon gas at the Site as a part of this assessment.

7.4 Lead Based Paint

NOVA conducted a visual survey to identify any damage (i.e., peeling, flaking, blistering) to painted surfaces within the accessible areas of the Property. Painted surfaces within the observed buildings were observed to be in good condition.

7.5 Mold Observation

NOVA provided a limited visual observation at the time of the Phase I ESA walk through for the presence of mold for the Site.

A reasonable effort was made to identify possible microbial-impacted areas. However, this does not imply a guarantee that all possible reservoirs (growth or airborne) of microbial growth were identified because microbial or water-impacted building materials may be hidden by walls, flooring, partitions, etc. In addition, it should be noted that bacteria growth might be present and amplified due to the presence of potential water-damaged building materials. Obvious evidence of microbial-impacted areas or water-damaged building materials was not identified in accessed areas at the Site at the time of the walk through.

8.0 FINDINGS AND OPINIONS

The following summarizes known or suspected environmental conditions in connection with the Site based on information collected during the ESA. For each condition, NOVA provides an opinion of the impact on the Site based on an evaluation of the results of record reviews, site reconnaissance and environmental sampling issues as discussed in this report. NOVA also provides a conclusion and rationale regarding whether or not an environmental condition is a *recognized environmental condition*.

- Based on the historical usage of the site and surrounding area for automobile repairs, painting, servicing, and gasoline filling stations since at least the 1930s, NOVA believes this may represent a *recognized environmental condition* for the subject site.
- The subject site is identified as an E-designated Site with E-Number 218 for Hazardous Materials Phase I and Phase II Testing Protocol, Air Quality- No. 2 Fuel Oil or Natural Gas Heat and Hot Water, and Window Wall Attenuation and Alternate Ventilation.

9.0 CONCLUSIONS / RECOMMENDATIONS

This Phase I Environmental Site Assessment (ESA) has identified *recognized environmental conditions* at the site and recommends the following:

- According to the historical Sanborn fire insurance maps, six gasoline storage tanks were identified on the property. Three (3) of these tanks were located along 31st Street and three (3) along 38th Avenue. The regulatory database, noted that two (2) 550-gallon underground storage tanks had been removed from the site in December of 1969. However, there are no indications of whether these tanks have been removed or abandoned in-place. Therefore, NOVA recommends that a Geophysical Engineering surveys (GES) of the site be conducted in order to determine if any additional tanks, other than the two (2) 2,000-gallon registered USTs, exist at the Site. Should additional tanks be found at the Site, NOVA recommends that they should be closed and/or removed in accordance with all local, State, and Federal regulations.
- NOVA recommends that subslab soil vapor sampling be conducted at the site in order to determine if the air quality at the site has been compromised. This sampling should be done in accordance with the New York Department of Health Indoor Air Sampling and Analysis Guidance.
- Based on the E-218 designation of the Site, NOVA recommends that all work on the site to be conducted in accordance with CEQR standards and the corresponding City agencies.
- NOVA recommends that a Phase II Environmental Site Assessment Report be prepared in accordance with the New York City Department of Environmental Protection to investigate the potential of recognized environmental conditions at the site due to the sites and surrounding areas current and historical usage. This report should also be conducted in accordance with CEQR standards as per the E-218 designation that has been placed on the site due to it current usage as a gasoline station.

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

AMTRAK SUNNYSIDE YARD	3929 HONEYWELL STREET	S 1/8 - 1/4 (0.137 mi.)	U165	575

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 7 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 11/19/2012 has revealed that there are 5 SHWS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the VAPOR REOPENED list, as provided by EDR, and dated 05/01/2012 has revealed that there are 2 VAPOR REOPENED sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 01/07/2013 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 11/19/2012 has revealed that there are 42 LTANKS sites within approximately 0.5 miles of the target property.

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 34 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

TANKS: This database contains records of facilities that are or have been regulated under Bulk Storage Program. Tank information for these facilities may not be releasable by the state agency.

A review of the TANKS list, as provided by EDR, and dated 01/02/2013 has revealed that there is 1 TANKS site within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 11/19/2012 has revealed that there are 2 VCP sites within approximately 0.5 miles of the target property.

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/19/2012 has revealed that there are 7 NY Spills sites within approximately 0.125 miles of the target property.

NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 3 NY Hist Spills sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 32 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 48 EDR US

EXECUTIVE SUMMARY

Hist Auto Stat sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 16 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIRS (AFS):

Airs Minor Details:

EPA plant ID: 110037615015
Plant name: HEER METAL WORKS INC
Plant address: 37-33 31ST ST
LONG ISLAND CITY, NY 11101
County: QUEENS
Region code: 02
Dunn & Bradst #: Not reported
Air quality cntrl region: 043
Sic code: 3356
Sic code desc: NONFERROUS ROLLING AND DRAWING, NEC
North Am. industrial classf: 331491
NAIC code description: Nonferrous Metal (except Copper and Aluminum) Rolling, Drawing, and Extruding
Default compliance status: IN COMPLIANCE WITH PROCEDURAL REQUIREMENTS
Default classification: POTENTIAL UNCONTROLLED EMISSIONS < 100 TONS/YEAR
Govt facility: ALL OTHER FACILITIES NOT OWNED OR OPERATED BY A FEDERAL, STATE, OR LOCAL GOVERNMENT
Current HPV: Not reported

Compliance and Enforcement Major Issues:

Air program: Not reported
National action type: Not reported
Date achieved: Not reported
Penalty amount: Not reported

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2011

DEC Memo:

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND" F & N was hired to conduct a phase 1 & phase 2 on a vacant lot. Part of this lot had been used as a gas station in the past. Several tanks were identified. During excavations to install footings for a new building, a waste oil tank was found and the top was damaged. During the heavy rains on 7/22/2003, water displaced the waste oil in the tank and the oil poured out into the trench area. F&N is going back to pump out the remaining oil and to "Guzzle" out the contaminated soil in the trench. F&N put in a proposal to the property owner to remove all of the remaining tanks on the site. 9/3/2003 Sangesland reviewed a Spill Closure Report prepared by F&N and dated August 19, 2003. Report outlines how a tank was found, pulled, contaminated soil "Guzzled" out and endpoint samples taken. All endpoint samples were clean. Spill Closed

Remarks: CALLER STATES A CONSTRUCTION COMPANY UNEARTH A WASTE OIL TANK YESTERDAY, AND SOMETIME LAST NIGHT WHEN IT WAS RAINING, THE TANK FILLED WITH WATER AND OVERFLOWED ONTO THE GROUND - CLEAN UP IS STARTING AT THIS TIME

Evaluation Action Summary:

Evaluation date: 02/11/2008
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 06/23/2007
Evaluation: SIGNIFICANT NON-COMPLIER
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 04/27/2007
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 04/27/2006
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: Not reported
Evaluation lead agency: EPA

Evaluation date: 08/27/2002
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: EPA Contractor/Grantee

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

 DER Facility ID: 125302
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"4/29/2002 - Sangesland spoke to property owner (Mr. Ron Levy).Mr. Levy did not feel comfortable with ProTest and requested information on how to close out this spill.Isolate and retest just the tank and just the piping. Once the spill is closed out, owner will abandon the tank and switch to gas. 6/10/2002 Man hole on top of tank was left open. Gasket was replaced and the tank passed the retest.7/3/2002 Mr. Levy called. He will send a copy of the tank test which shows that the tank passed the second test. He also said that he will be pulling the tank out and wanted to know the proper procedures. Sangesland provided Mr. Levy with a contact at PBS.6/16/05 Heitzman: See PBS 2-607788. Tank was removed July 2002. Closed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"8/18/2004 Sangesland spoke to Manny Caruana, Building Supervisor at See Factor Industry Inc. to discuss the specifics of what the DEC needs to close out this spill9/13/2004 Sangesland spoke again with Manny Caruana and asked him to send in the soil borings he has along with the tank closure documents.9/15/2004 Mr. Caruana hand delivered a package of documents to the DEC office. Included was a summary letter outlining the testing and closure of the tank. After the tank failed the tank test in 1998, it was not retested, however Mr. Caruana says he inspected the interior of the tank and said it was still secure. He states that the initial test was faulty because of a dry leak on the vent line. In 2000 the tank was abandoned by USA tanks and an abandonment certification was forwarded to the NYC Fire Dept. The building now operates on natural gas.In Feb 2000 several soil borings were taken on the site (3 in the tank area) as part of a structural investigation for a possible building expansion. Three of these borings were approx. 10 ft from the abandoned tank and went down to 20 ft depth. There was no evidence of any soil

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "
"02-28-05: Reassigned to Tibbe. Spill reopened due to pending
investigation by NYCT.08-11-05: NYCT performed an innvestigation.
Only one soil boring showed SVOC contamination above TAGM but it did
not have any correponding gw contamination nor was there any visual
or olfactory indication of petroleum contamination. Elevated SVOCs
are mostly likely due to fill material identified in the soil borings.
Not reported

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description: Location:Sunnyside Yard (the Site) is located at 39-29 Honeywell Street, Long Island City, Queens County, New York.Site Features:The Site is a railroad maintenance and storage facility that currently encompasses approximately 133 acres. Newtown Creek, which defines the border between Queens and Kings Counties, is located less than 0.5 mile south of the western portion of the Site. The Site is bordered by commercial/residential properties, with Northern Boulevard located to the north, 42nd Place located to the east, Thompson Avenue to the west, and Skillman Avenue located to the south. Current Zoning/Use:The Site is located in Manufacturing Zone (M1-1) and used as a railroad maintenance and storage facility Historic Use:The Yard was originally constructed in the early 1900's by the Pennsylvania Tunnel and Terminal Company, a subsidiary of Pennsylvania Railroad (later known as the Penn Central Transportation Company). On April 1, 1976, the Consolidated Rail Corporation (Conrail) acquired the Site, and the same day conveyed it to Amtrak, which has continued to operate it as a storage and maintenance facility for railroad rolling stock. Prior to September 29, 1961, a portion of the yard was owned by Long Island Rail Road (LIRR). Today, the LIRR maintains a right-of-way through the Yard. The Long Island Railroad (LIRR) is constructing tunnels through the Yard as part of its East Side Access (ESA) project. An extensive cleanup program was completed in 1996 to remove PCB contaminated sediment from impacted sewer manholes with subsequent sampling to identify sewer segments and manholes with

MAP FINDINGS

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

recurring PCB contaminated sediment impacts. Operable Units: The site is divided into six operable units. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. The operable units for this site are: Operable unit 1 (OU1) is the soil above the water table within the footprint of the High Speed Trainset Facility Service and Inspection (HSTF S and I) Building. Operable unit 2 (OU2) is the soil above the water table within the footprint of the HSTF S and I Building ancillary structures. Operable unit 3 (OU3) is the soil and separate phase petroleum hydrocarbon accumulation above the water table and soil below the water table within 8 acres in the north central portion of the Site. Operable unit 4 (OU4) is the soil above the water table (unsaturated zone) at the Site, excluding OU-1, OU-2, and OU-3. Operable unit 5 (OU5) is the sewer system (water and sediment) beneath the Site. Operable unit 6 (OU6) is the groundwater and saturated soil beneath the Site. Site Geology and Hydrology: Historic fill on the Site is predominantly comprised of reworked glacial deposits (unstratified sand, silt, clay and gravel) and railroad ballast, with lesser amounts of ash, cinders and construction debris. With the exception of paved areas, land occupied by buildings, and vegetated areas, the railroad ballast is ubiquitous at the land surface throughout the Site. Groundwater beneath the Site occurs in fill deposits, wetlands, or the Upper Pleistocene glacial deposits. The saturated Upper Pleistocene deposits comprise the Upper Glacial aquifer. The depth to groundwater across the Site varies from one to fifteen feet below ground surface. Groundwater within the shallow deposits flows predominantly west across the Site. However, groundwater between Queens Boulevard and Honeywell Street flows northerly and northwesterly toward the buried flow path of the Dutch Kills Creek and/or East River. In the deeper deposits, groundwater predominantly flows west across the Site.

Env Problem:

Nature and Extent of Contamination: Prior to Remediation: Remedial investigations have been conducted in multiple phases under NYSDEC oversight pursuant to the consent order. Seventeen specific areas of concern (AOC) were identified of concern (COCs). The following environmental exposure pathways and ecological risks have been identified for the Site: The Site poses an environmental threat associated with the potential impacts of contaminants to groundwater from soils impacted by the COC's. Continued migration of contaminated groundwater from off-site sources poses a potential environmental threat to on-site groundwater. Off-site sources will be addressed by remedial programs for the respective neighboring sites, as appropriate. There are no wetlands or other exposure pathways to fish and wildlife receptors in the Site. Operable Unit 1: Polychlorinated biphenyls (PCBs) were detected in 16 of 19 soil samples; all but one were less than 1 parts per million (ppm). The maximum concentration was 2 ppm. Six semi-volatile organic compounds (SVOCs), specifically carcinogenic polycyclic aromatic hydrocarbons (cPAHs), were detected above Technical and Administrative Guidance Memo (TAGM) 4046 Recommended Soil Cleanup Objectives (RSCOs) at depths up to three feet below ground surface (bgs). However, there was only one exceedance of the site specific soil cleanup level (SSSCL) of 10 ppm. Operable Unit 2: The soil above groundwater was sampled at depths up to three feet bgs. PCBs were detected in 15 of the 20 samples at a maximum concentration of 4.5 ppm. The other compounds of concern

AMTRAK SUNNYSIDE YARD (Continued)

S103575644

(COCs), lead and total cPAHs, were also detected at levels below the SSSCLs of 1000 ppm and 25 ppm respectively. Therefore, No Action was selected in the Record of Decision (ROD). Operable Unit 3: Surface Soil - The SSSCLs were exceeded for PCBs (2 out of 102 samples); lead (3 out of 3) and cPAHs (2 out of 27). The maximum concentration for PCBs was 73 ppm; for lead it was 1,080 ppm and cPAHs 108 ppm. Additionally, half an acre of visible petroleum contaminated surface soil was delineated at an average depth of one foot bgs. Subsurface Soil - There were no exceedances of the SSSCLs for the COCs. Waste Materials - The waste material onsite consists of PCB contaminated petroleum present in: (1) surface soils as mentioned above; (2) a potentially mobile separate phase hydrocarbon (SPH) plume floating over the groundwater surface; (3) a residual SPH trapped in soil pores below the water table; and (4) residues in underground structures. Sixty-five samples of SPH were collected and analyzed for PCBs. The maximum concentration was 360 ppm. SPH and sludge samples taken from underground structures contained PCB concentrations of 512 and 517 ppm respectively. Operable Unit 4: Surface Soil - There were exceedances of the SSSCLs for PCBs (60 out of 786 samples); lead (52 out of 471); and cPAHs (31 out of 436). The maximum PCB concentration was 25,000 ppm; cPAH was 113 ppm and lead was 7,020 ppm. Subsurface Soil - There were exceedances in soil samples for the SSSCLs viz. PCBs (13 of 455); lead (17 of 354) and cPAHs (18 of 376). The maximum PCB concentration was 3500 ppm; lead was 2600 ppm and cPAH was 119 ppm. Operable Unit 5: Sewer Sediment - PCBs were detected in 29 samples of sediment from the sewers at concentrations ranging from 0.053 ppm at MH-69 to 120 ppm at MH-6. PCB concentrations at MH-6 (one sample) and MH-38 (two samples) exceeded the 25 ppm NYSDEC-approved site specific soil cleanup level. MH-6 was remediated as an IRM in October 2011. Sewer Water - Discrete water samples (filtered and unfiltered) were collected from 12 manhole locations and analyzed for PCBs during performance of the OU-5 RI. PCBs were detected in 17 of 39 unfiltered samples with concentrations ranging from 0.14 parts per billion (ppb) to a high of 83 ppb. Five of the unfiltered samples, one from MH-3, three from MH-6 and one from MH-40 exceeded the 1 ppb waste water effluent limit. The waste water effluent limit is appropriate since the sewer discharges to a Waste Water Treatment Plant. Only one of the 39 filtered samples (MH-3) contained PCBs at a concentration (1.8 ppb) slightly exceeding the 1 ppb waste water effluent limit. Operable Unit 6: Saturated Subsurface Soil - A total of 159 samples of soil were collected from 29 boring locations. There were no exceedances of the SSSCLs for the COCs. Groundwater - Three plumes of chlorinated volatile organic compounds (CVOCs) were defined at the site. However, none of these were attributable to site operations, but are attributable to off-site sources. No site related groundwater contamination of concern was identified. Post Remediation: Remediation has been completed in OU-1 where 472 tons of contaminated soil, fill and debris were excavated and disposed of along with 280 cubic yards of concrete and asphalt and 2,450 gallons of liquid. A No Action ROD was issued for OU-2. Remediation has been initiated at OU-3 and OU-4. The OU-5 ROD for cleaning the sewers was issued on March 27, 2011, and the OU-6 ROD (No Action) was issued on March 30, 2010.

Health Problem:

Groundwater in the area of the site is not used as a source of potable water. Access to the site is controlled, preventing trespassers from coming in contact with contaminated soils.

Dump:

Tank Info:
Site ID: 15117

Tank Number: A02
Tank ID: 20048
Tank Status: In Service
Tank Type: Steel/carbon steel
Pipe Model: Not reported

Equipment Records:
B00 - Tank External Protection - None
A00 - Tank Internal Protection - None
D02 - Pipe Type - Galvanized Steel
J02 - Dispenser - Suction
K99 - Spill Prevention - Other
L09 - Piping Leak Detection - Exempt Suction Piping
C01 - Pipe Location - Aboveground
F01 - Pipe External Protection - Painted/Asphalt Coating

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008

Waste name: LEAD

Waste code: D009

Waste name: MERCURY

Waste code: D018

Waste name: BENZENE

Waste code: D035

Waste name: METHYL ETHYL KETONE

Waste code: D039

Waste name: TETRACHLOROETHYLENE

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: B007

Waste name: B007

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the

Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller Phone: Not reported
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 127449
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL."This spill case was reassigned from DEC (Sigona) to Rommelon 02/10/2004.02/28/05: Transferred from Rommel to Tibbe. Site being investigated by NYCT.Bureau B, unassigned, due to low priority. Transferred from R-2 on April 27, 2005. Formerly R-2, unassigned.12/15/05: Transferred back to Tibbe from Bureau B.08-30-06: NYCT attempted to perform a subsurface investigation but continually encountered refusal. A new subway tunnel, ventilation bulding and utilities were constructed in the area of the former tanks and associated contamination. It would appear that the contamination was removed during construction becuae of the large excavation that was required to construct these facilities, but NYCT has no reports or mainfests to indicate how much was removed. Further investigation does not appear to be possible due to the ubderground structures and utilities.

Remarks: Free product found in groundwater monitoring well

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 12/28/11- Zhune visited the site. RR Plumbing Sevice Corp. was going to replace the sewer line at this site. While digging they noiced oil smell. They stopped digging with the machine and started doing hand digging when they found soil contamination coming from a leaking return line. The line was shut down. AB Environmental is going to do the clean up.Violeta Leano 718-784-3530 -- Owner tleano@yahoo.com02/24/12- On 02/15/12 AB Environmental emailed the report dated 02/9/12.The soil contaminated in the impacted area was removed. The excavation was completed as best that could be accomplished with out compromising the foundation. One endpoint sample was collected at the bottom of the excavation(7feet). The endpoint sample analytical result indicated that all detected

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

1000387917

Quantity: 00025
Units: P - Pounds
Number of Containers: 001
Container Type: DF - Fiberboard or plastic drums (glass)
Handling Method: B Incineration, heat recovery, burning.
Specific Gravity: 01.00
Waste Code: D004 - ARSENIC 5.0 MG/L TCLP
Quantity: 00040
Units: P - Pounds
Number of Containers: 001
Container Type: DF - Fiberboard or plastic drums (glass)
Handling Method: B Incineration, heat recovery, burning.
Specific Gravity: 01.00
Waste Code: D002 - NON-LISTED CORROSIVE WASTES
Quantity: 00013
Units: P - Pounds
Number of Containers: 001
Container Type: DF - Fiberboard or plastic drums (glass)
Handling Method: T Chemical, physical, or biological treatment.
Specific Gravity: 01.00
Year: 2000
