Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: GROUP OF BIACHAM CORP
Owner/operator address: NOT REQUIRED
NOT REQUIRED, WY 99999
Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ZHAO"1/30/03 - tried to reach Jim, Statewide, and Mile, Silver Star.1/20/2003 - Two 275 gal tanks removed. Tanks were storing hydrolic oil.2/12/2003 - Grab samples results were received by DEC. Two floor samples showed clean results with both volatiles and semi-volitiles. North and west walls showed elevated contaminations with semi-volatiles.2/26/2003 - Re-sampled north and west side walls one foot away from the excervation. West wall side samples at 10 feet level showed elevated levels.4/1/2003 - Soil contamination remediation letter sent to site owner requesting that investigation must follow the DEC guidance.9/26/2003 - Laurel Environmental has contracted for the investigation. Zhao was on scene during Geo-boring.11/17/2003 - Final investigation report which prepared by Laurel Environmental Assoc. received by 11/12/2003. The report has indicated that a four semi-volatiles was slightly exceeded TAGM clean up levels at one boring port at 7' to 8' below surface and two componds at another boring point 15' below surface slightly exceeded TAGM Clean up levels. Based on the report, it's not practical to remediate. The spill number is closed.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was

"TIBBE"07/13/04 - transered from Zhitomirsky to Tibbe.07/27/05:
Investigations performed in the 1990's and 2000's for the closure of
UST. NO GW contamination discovered. Some soil contamination
discovered during removal of tank but it was excavated. NYCT has no
information concerning illegal dumping. Caller never returned phone
call. See 91-00729.
Remarks: CALLER RECEIVED AN ANONYMOUS TIP THAT A TRANSIT AUTHORITY SUPERVISOR
AT SITE IS CONTINUALLY DUMPING MATERIAL IN A LOT BEHIND THE BUILDING
- CALLER VERIFIED THAT THERE IS A SUBJECT AT THAT SITE WITH THE SAME
LAST NAME - CALLER BELIEVES THAT THE NOTIFIER IS ALSO AN EMPLOYEE ON
SITE - NOTIFIER ALSO STATED THAT AFTER THEY DUMP THE MATERIAL THEY
COVER IT WITH CONCRETE - CALLER WOULD LIKE A CALL BACK IN REFERENCE
TO THIS INCIDENT

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Owner/Op start date: 01/01/1966
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:

Date form received by agency: 01/01/2006
Facility name: MTA - EXISTING RAIL YARD
Classification: Not a generator, verified

Date form received by agency: 01/21/2003
Facility name: MTA - EXISTING RAIL YARD
Classification: Large Quantity Generator

Violation Status: No violations found

FINDS:

Registry ID: 110014358881

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis.

Env Problem: Nature and Extent of Contamination: Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The ROD recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface, therefore exposure is unlikely. A soil vapor extraction system is in place on-site to remediate VOCs in soil and soil vapor. Therefore, inhalation exposure via soil vapor exposure has been minimized. Additional data is needed to evaluate the potential for off-site exposure due to soil vapor intrusion.

Updated By: JHOCONNE
Site Description: See also Site no. 241009Location:The Levco Metals Finishers property is located in an urban area of New York City in an industrial part of Long Island City, Queens County. The address is 34-11 36th Street. Site Features:The entire site is occupied by a one story building which covers approximately 21,900 sq.ft. Historical Use:Levco was a metal finishing facility which conducted metal stripping, etching, and plating processes for over 30 years. Industrial operations ceased in November 1990. In March 1996, under the State Superfund Program the Record of Decision (ROD) was executed, which recommended delisting of the site from the Registry. The site has been delisted from the Registry in May 1996. The ROD also recommended additional groundwater monitoring on a semi-annual basis. The additional groundwater monitoring is being addressed under the Voluntary Cleanup Program.
Env Problem: Nature and Extent of Contamination:Interim Remedial Measures (IRMs) consisting of excavation and off-site disposal of soil achieved the

main remedial goals of the removal of hazardous waste in the former sump area and the cleanup of on-site soil to levels protective of the public health and the environment. These actions were completed under the State Superfund (SSF) Program. Additional remedial action commenced in 2005 under the Voluntary Cleanup Program (see site no. V00600) which is intended to address residual contaminants in the groundwater. An off-site vapor investigation was completed in 2010 under the SSF Program which concluded that there were no off-site vapor issues. Soil: Prior to IRM: elevated concentrations of volatile organic compounds (e.g., 2 ppm trichloroethane; 3.5 ppm trichloroethene) and metals (e.g. 21.2 ppm cadmium; 12 ppm chromium) were detected in the soil beneath the sump area. Contaminated soil from this area was excavated and disposed off site in October 1994 under the SSF Program. Groundwater : On-Site groundwater is contaminated as a result of disposal activities. Predominant contaminants above Class GA groundwater standards are trichloroethene, 1,1,1-trichloroethane, and cis-1,2-dichloroethene. The SSF Record of Decision (ROD) recommended additional groundwater monitoring on a semi-annual basis. From 1996 to 2001, several rounds of groundwater monitoring have been conducted and showed that the contaminant levels in the groundwater beneath the site have not declined to acceptable levels. Further remediation of groundwater is being addressed under site no. V00600. Soil gas: An off-site vapor investigation was completed in 2010 which concluded that there were no off-site vapor issues.

Health Problem: Soil and groundwater are contaminated with volatile organic compounds (VOCs). Exposure to contaminated groundwater is not expected since the area is served by public water. Contaminated soil is subsurface and will be removed as part of a site-wide redevelopment. A sub-slab depressurization system will be incorporated into the new building to prevent soil vapor intrusion from site related contaminants of concern.

Env Problem:

Street and 37th Avenue. Site Features: The main site features includes single story buildings and an open area. There are three inter-connected single story buildings, which occupy three adjacent lots. Approximately one third of the Site is open area which occupies another lot. The open area extends to the west up to 23rd Street. The open area also houses a tractor trailer sized metal storage container. The site is currently abandoned. Current Zoning/Use(s): The on-site laundry is currently inactive and is zoned for commercial use. The surrounding parcels are currently used for a combination of commercial, light industrial and utility right-of-ways. The nearest residential area is upgradient of the site, located north of laundry building, on the other side of 37th Avenue. There is a residential area approximately 400 feet downgradient of the Site, on the south side of 38th Avenue. Historical Use(s): From the 1930s to the late 1980s, the Site was used as a commercial laundry. The Site had been utilized as a commercial dry cleaner from the late 1980s to the mid 1990s. Prior uses that appear to have led to site contamination include dry cleaning operation, poor housekeeping and spills. An adjacent property owner conducted a Phase I Environmental Site Assessment in September 2003, a Phase 2 Limited Subsurface Investigation in October 2003 and a Phase 2 Limited Groundwater Investigation in December 2003. The Department conducted a Site Characterization from August 2007 through March 2010. In October 2010, the Site was placed on the Registry of Inactive Hazardous Waste Disposal Sites as a Class 2 site. Operable Units: Currently the Site has one operable unit, OU1. An operable unit represents a portion of a remedial program for a site that, for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. Site Geology and Hydrogeology: Subsurface material consists of sand and some silt and urban fill. The depth to the groundwater varies from approximately 13 to 15 feet below the ground surface. On-site groundwater flow direction is relatively flat. The general flow direction appears to be towards the southwest. Based on the MIP (Membrane Interface Probe) survey, the Perchloroethylene (PCE) plume appears to be spreading south. Nature and Extent of Contamination: The primary contaminants of concern at the site are tetrachloroethene (PCE) and trichloroethene (TCE). PCE and TCE have been found in on-site soils at concentrations up to 22 ppm, and 2.6 ppm, respectively, near the large metal storage container in the open area behind the laundry building based on Site Characterization conducted during 2009. The unrestricted use RSCOs for both PCE and TCE have been exceeded. PCE and TCE have been detected in on-site shallow groundwater at concentrations up to 2,000 ppb and 110 ppb respectively. Groundwater standards have been exceeded for PCE, TCE, vinyl chloride (VC), chloroform, and cis-1,2-dichloroethene. Per February 2009 laboratory data, the plume of PCE and TCE-contaminated groundwater has migrated at least 400' off-site at levels up to 13,000 ppb and 1800 ppb, respectively. PCE and TCE were detected in on-site soil vapor at levels up to 560,000 g/m3 and 6400 g/m3 respectively and off-site at levels up to 2600 g/m3 and to 470 g/m3, respectively. Superfund referral for RI/FS received on April 2011. Special Resources Impacted/Threatened: The site is located in the urban area and Fish and Wildlife Impact Analysis is not warranted. Significant Threat: The site poses a significant environmental threat because the area overlies a sole-source aquifer and because there is an ongoing release of PCE

and TCE from soil into groundwater.

Health Problem: Contact with contaminated soil is not expected since it is located at depth and covered by buildings, asphalt and concrete. Ingestion of contaminated groundwater is not likely since the area is served with public water. Site-related contaminants are present in soil vapor. Therefore, there is a potential for soil vapor intrusion to occur in on-site and off-site structures. Investigation of this potential pathway is recommended.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Acres: 1.100
HW Code: 241016
Record Add: 11/18/1999
Record Upd: 03/05/2012
Updated By: JHOCONNE

Site Description: Location: The site is located at 37-18 Northern Boulevard, Long Island City, Queens County, New York in the northwestern section of the county. Bordering the Site is Northern Boulevard to the north; Amtraks Sunnyside Railroad Yard (Sunnyside Yard) to the south; 39th Street, an automobile dealership, and a Hess (formerly Merit) gasoline station to the east; and commercial and industrial properties to the west. Site Features: The Site is approximately rectangular in shape and occupies approximately one acre of land. The Site contains a six-story industrial building with approximately 42,000 square feet per floor. A narrow strip of land on the south side of the property contains a loading dock and a dirt access path for vehicles. This strip of land is owned by the Metropolitan Transportation Authority (MTA) and is part of a long-term lease to Standard Motor Products. Current Zoning/Use(s): The site is being used for commercial office space. There is a commercial vegetable farm occupying part of the buildings roof. Historical Use(s): The Site has historically been involved in industrial and manufacturing activities since 1919. A small plating line for chrome plating of small machine parts operated from approximately 1975 to 1984. The site was previously used for painting automobile parts prior to distribution. In 1984, aqueous based paints replaced the previously used solvent-based paints. All painting operations were gradually eliminated between 1990 and 1991. The site also housed several other processes and included die-casting operations that ceased in the 1970s; rubber production that was eliminated around 1985; and degreasing which utilized chlorinated solvents that ended in

Env Problem:

1990. Until March 2008, automobile parts and components at the site were primarily manufactured in the basement within recent years. The manufacturing operations included metal fabrication and machining, plastic injection molding, and assembly. A small photography laboratory for production of newsletters, brochures also operated. Hazardous or toxic materials involved in plant operations are lubricating oils for machinery, caustics for degreasing, phenolics used in molding processes, epoxies for coil production, and water-based inks involved in their small-scale printing. All wastes were temporarily stored on-site in secure containers prior to off-site disposal at a licensed treatment, storage, and disposal (TSD) facility. The Record of Decision was issued on March 23, 2009, and the Remedial Design/Remedial Action Order on Consent was signed in April 2010. Site Geology and Hydrogeology: The Site is underlain by the following units (in order by increasing depth): urban fill, Upper Pleistocene glacial deposits (including both till and channel deposits), and bedrock. The fill is predominantly comprised of reworked glacial deposits (sand, silt, clay, and gravel) and railroad ballast with minor amounts of construction debris and other materials. The Upper Pleistocene glacial deposits consist mainly of ground moraine deposits (unstratified, poorly sorted mixture of sand, silt, clay, and gravel). Bedrock was encountered at a depth of 74 feet below land surface (i.e. 53 feet below mean sea level). The groundwater beneath the Site occurs under water table (unconfined) conditions. The depth to groundwater in the vicinity of the Site is approximately 5 feet below ground surface (bgs) but may be influenced by surface runoff that results in standing water across most of the Site during rain events. The water table occurs in either fill or glacial deposits. Groundwater elevation data show that flow is primarily from east to west beneath the Site. Due to the proximity to the East River, the hydraulic gradients are gentle which is consistent with the regional groundwater contour map and the groundwater contours present on the adjacent Sunnyside Yard property. Vertical groundwater movement is restricted by the Gardiners Clay where present or by the Precambrian bedrock which is considered to be the bottom hydrogeologic boundary of the groundwater flow system. The groundwater flow rate was estimated to be 0.78 feet/day.

Nature and Extent of Contamination: A site investigation in 1990 was initiated after an oily sheen was observed in a puddled area on the southeast side of the property. Soil samples from this area revealed elevated levels of petroleum hydrocarbons and volatile organic compounds (VOCs), primarily 1,1,1-trichloroethane. Approximately 2,700 sq. ft. of soil was excavated to a depth of 18 inches and stockpiled on-site. Further investigation determined that soils in the area of the rear loading platform contained elevated levels of petroleum hydrocarbons and VOCs (trichloroethane TCA, trichloroethene - TCE and other related chlorinated VOCs). Contaminated soils extended beyond the area excavated. Subsequent groundwater samples taken indicated contamination with TCA and lead. The highest levels of groundwater contamination are adjacent to the loading dock at the back of the building. Soil-Arsenic was detected at 19 ppm, which is above the applicable soil cleanup objectives (SCOs). Groundwater-For PCE, two monitoring well samples contained concentrations which exceeded the groundwater standard of 5 ppb. The sample from MW06 contained PCE concentration that has increased from 10 ppb in 2003 to 17 ppb in 2008. The sample from MW14D contained PCE at a level of 5.8 ppb. For TCE, four monitoring wells contained concentrations which

MAP FINDINGS

STANDARD MOTOR PRODUCTS INC (Continued)

1000310304

exceeded the groundwater standard of 5 ppb. TCE concentration in MW06 has increased from 6 to 8.2 ppb between 2003 and 2008. MW11S detections declined slowly from 13 ppb to non-detect from 2003 to 2008. MW11D detections declined from 18 ppb in 2003 to non-detect in 2008 with a spike of 78 ppb in 2005. MW14D detected TCE at 5.1 ppb. For cis-1,2-DCE, 10 monitoring wells contained concentrations which exceeded the groundwater standard of 5 ppb. MW09D sample contained detections that fluctuated between 2003 and 2006, the concentrations ranged from 48 to 36 ppb. The sample from MW11S contained cis-1,2-DCE concentrations that declined slowly from 71 ppb in 2003 to non-detect in 2008. The sample from MW11D contained concentrations that declined from 93 ppb in 2003 to 43 ppb in 2005 and 2008. The sample from MW12 contained cis-1,2-DCE concentrations that declined slowly from 64 ppb in 2003 to non-detect in 2008. The samples from MW13S and MW13D contained concentrations that declined from 44 ppb in 2003 to 17 ppb in 2005, and 34 ppb in 2003 to 20 ppb in 2005, respectively. The samples from MW14S and MW14D contained detected cis-1,2-DCE concentrations at 14 and 21 ppb, respectively. The samples from MW15 and MW16 contained detected concentrations of 19 and 9.4 ppb, respectively. For VC, 7 monitoring wells yielded samples whose concentrations exceeded the groundwater standard of 2 ppb. The sample from MW09S contained VC at 11 ppb in 2003 and 0.1 ppb in 2006. The sample from MW09D contained VC at a constant concentration of 4 ppb from 2003 to 2006. The sample from MW11S contained VC concentrations that declined slowly from 31 ppb in 2003 to non-detect in 2008. The sample from MW11D contained detections that fluctuated between 2003 and 2008, the concentrations ranged from 12 ppb in 2003, 6 ppb in 2006, and 8.5 ppb in 2008. The sample from MW12 contained VC concentrations that declined slowly from 13 ppb in 2003 to non-detect in 2008. The sample from MW13S contained VC concentrations that declined from 3 ppb in 2003 to 0.5 ppb in 2008. The sample from MW15 contained a VC concentration of 19 ppb in 2008. For 1,1,1-TCA, 2 monitoring wells yielded samples whose concentrations exceeded the groundwater standard of 5 ppb. The sample from MW10 contained 1,1,1-TCA at 13 ppb in 2003 to non-detect in 2005, and increased to 9.2 ppb in 2008. The same well, MW10 also detected 1,1-DCA at 74 ppb in 2005, but the concentration decreased to 8.2 ppb in 2008. The relatively flat gradient may cause more outward dispersion than advection. MW10 is also located underneath the 39th Street Bridge which could be a potential source for this relatively low contamination. The sample from MW11D contained 1,1,1-TCA at 6 ppb in 2003 and increased to 180 ppb in 2008. Significant Threat: The site presents a significant environmental threat. An Interim Remedial Measure (IRM) consisting of a sub-slab depressurization system (SSDS) has been installed in the building and is currently in operation.

Health Problem:

The on-site structure will have an active sub-slab depressurization system which will prevent contamination from entering the building via soil vapor intrusion. A air sparge/soil vapor extraction system will address contaminants present in the groundwater. Exposure to site-related contaminants in drinking water are not expected because public water serves the area.

DEC Memo: 4/6/04 TTF letter sent out to Cary Wolf.9/29/04 Met with B. Cohen(Certilman Balin Attorneys), B. Beck(Consultant, National Env.) with J. Rommel and L. Oliva. BP is doing cleanup under spill #8402855. Provided copy of TTF letter dated 4/6/04. B. Beck to provide response by 10/8/04.10/20/04 Received repair record for the premium tank line performed by Alvin Petroleum. Alvin excavated over the premium tank on 4/9/04. They found plastic in the check valve over the tank and removed the plastic and insert on valve. DIsconnected suction line from tank, tested the line at 50lbs. and found the line tight. Reconnected and installed drop in check valve. Received passing tightness test of previously failing premium line gas tank performed by Crompco. There was no release to the environment.10/21/04 NFA letter mailed.

DEC Region: 2
DER Facility ID: 149087
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"6/4/2002 - Sangesland called Dave Fazin at Crown Leak Detection (516-939-2959) to find out if repair work was ever done to this tank. If so, Crown needs to submit a letter stating that: tank was welded, past a tank test, no visible sign of leakage.4/14/06 - L. Alden - suggested action: Re-establish contact with Crown Leak Detection or site owner.11/16/06 - Austin - Reassigned to Ketani for followup/review - end12/1/06 - Raphael Ketani. The original caller was David Fazin of Crown Leak Detector (516) 939-2959. The TTF was on 3/26/02 and was the result of a failed epoxy patch. The patch was supposed to be rewelded and the tank system retested. Gus Tsambas (718) 721-2688 was involved with the site. PBS case #2-607845 with a 1500 gal. tank in service with #2 oil. The owners are Algus Realty Co., 25-26 33 Street, Astoria, NY, 11103, (718) 721-2688.I made contact with Mr. Tsambas. The phone number was his home. He said he has the passing test results and he will send it to me. He said that the tank sits on the concrete floor and the patch is on the top of the tank. He said that no oil was released.12/12/06 - Raphael Ketani. Mrs. Gallun of the Gallun Agency (718) 728-8120 called to ask what DEC needed to close the spill case. I told her we needed a new tank system test showing that the system is tight. She said she will have the super. call the oil company and arrange such a test, and send me the results. 1/4/07 - Raphael Ketani. I received the passing tank test results from Mr. Tsambos. Based upon these results and Mr. Tsambos' statement to me on 12/1/06 that no oil was released, I am closing the spill case.1/10/07 - Raphael Ketani. I received a copy of the passing tank test results from the Gallan Agency - Insurance and Real Estate.
Remarks: EPOXY PATCH ON TANK - WILL BE CLEANED,WELDED AND RETESTED

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "DEMEO"4/21/03 TJDUST Closure Report prepared by The Shaw Group Inc reviewed. One 4,000 gallon UST containing #2 Fuel Oil removed. Samples collected, SVOC Exceedances noted. Shaw stated supplemental investigation will be performed to further delineate petroleum impacted soils and groundwater impacts. 8/23/04 TJDShaw submitted (8/19/04) a work plan for supplemental investigation. Site is being developed for the construction of a new public school. As part of the project a new underground parking garage is to be built, which will involve excavating soils to a depth of 15 feet. Additional soil borings are planned in the area of previously identified contamination. Work plan was verbally approved on this date with requirement that SHAW notify DEC a minimum of 48 hours prior to scheduling sampling event. 8/23/04 TJD Multiple spills on single address. Spill 0104171 closed and cross referenced to 0101345. 11/17/05 - L. Alden - Called Mike Sherwood, Shaw Group, at (845) 492-3182. Left message. 12/19/05 - L. Alden - Called Sherwood back. Shaw is not doing the additional investigation on this site. Called his client, Lee Guterman, at the NYC School Construction Authority, (718) 472-8502. This property will be the site of the Frank Sinatra School. Anna Ciecierska, (718) 752-5028, returned my call. She didn't know the specifics of the project but would look into the file to determine where they were with the investigation/cleanup effort. 12/20/05 - L. Alden - Anna Ciecierska called back today. She had a report from February 2005 where the consultant had delineated the contaminated soil. She indicated that removal of contaminated soil was to commence within a week or two. She would wait to get the report before submitting a request to close the spill. 5/01/06 - L. Alden - Mark Hudok, GZA Geoenvironmental, (973) 256-7800, called. He was preparing a remediation plan and called to discuss post-excavation sampling that would be necessary after removal of contaminated soil. Recommended action: Review excavation plan and post-excavation results. 8/15/2006 Sangesland received a call from Jennifer Kahn of SCA requesting guidance on who the DEC case manager was for this site. Apparently in 2005 the project was sent up to DEC Albany for work and was then transferred back to DEC Region 2. Because the site is already into the remediation phase, the case is being transferred to the Region 2 Remediation Group (Koon Tang). 08/15/06: Transferred to Yau. (Yau) 08/16/06: Visited the school site with Joe. Met with the representatives from SCA. Told them additional groundwater samples will be required at the soil/groundwater interface. Will send in report as soon as results come back. (Yau) 08/24/06: Received report along with lab analytical results from SCA. Both soil and groundwater results are good except for N-2, N-3, and W-2. 1. The benzo(a)anthracene and benzo(a)pyrene exceeded TAGM slightly for the soil samples. 2. The o-xylene and dibenz(a,h)anthracene exceeded the TOGS standard slightly. DEC will approve the construction of a school building on top the this site. (Yau) 10/16/06 Re-assigned from Yau to Chanda (Chanda) 12/20/06: DEC received a phone call from Mr. Drew Pardus, School construction Authority, Ph: (718) 752-5036. He said that last week soil excavated from

the construction site and soil samples were sent to lab analysis. He will send in report as soon as possible as result come back.(Chanda)2/27/07:DEC received Endpoint Soil and Groundwater Sampling Results prepared by Shaw Environmental and Infrastructure, Inc., dated 2/26/07.3/14/07:DEC reviwed all report and documents regarding this spill. Based on the information presented to the Department DEC closed this spill.(Chanda)3/15/07: A NFA letter was issued to Ms. Lee Guterman, Manager, IEH Department, SCA, and copy to Mr. Bob Kanaparathi, SCA and Michael R. Sherwood Shaw Environmental & Infrastructure, Inc.

Remarks: WHILE EXCAVATING A SITE, CONTAMINATED SOIL WAS DISCOVERED. SOIL IS BEING STOCKPILED.

DEC Memo: 11/30/2005 Sangesland spoke to rep at Island tank. She said the site was dug out and endpoints were clean. She said a closure report would be sent ASAP.1/4/06-Hiralkumar Patel. Here is the summary of the report from Island Environmental Tank, Inc.* According to owner, the tank has previously been used for the purpose of storing #2 heating oil and owner doesn't know when this tank was installed.* UST was installed horizontally in the backfill material, with the top of the tank located approximately 4' below the surface.* A 1080 gal. capacity tank was removed in the presence of Mr. Vinny Lovari of Island Tank Enviromental. After removal from cavity, tank has been cut and washed and removed oil and water mixture with vac/truck.* No groundwater or static surface water was encountered in the tank cavity.* Tank had pits and holes.* Tank cavity was excavated approximately 30 cubic yard of soil in 55 gal. drums and disposed at Jamaica Recycling Inc. Jamaica, NY.* Tank cavity was backfilled and compacted in place.* 6 samples were taken out from cavity and tested at Severn Trent Laboratory, Edison, NJ.* The metal tank and all metal tank system components were removed from teh owner's property and disposed of as scrap metal at John Iron & Metal Co.,Inc. 33 Arthur Kill Road, Staten Island, NY.1/5/06-Hiralkumar Patel. No Further Action required letter has been sent to Mr. John Domenico.Case closed as per Mr. Jeff Vought.02/03/06-Hiralkumar Patel. Send out NFA again through fax (212-689-6082) as per John's request.
Remarks: tnak removal found oil on the tank. THERE IS 3 OR 4 DRUMS THAT NEEDS TO BE REMOVED. THE TANK HAS BEEN CUT UP.

DEC Memo: 2/5/07 - Haggerty - Located and reviewed UST Closure and Site Restoration Report dated Sept 16, 1998. Report also states additional UST's could be on-site. 1 unknown UST and piping were discovered during remedial activities. Spill to remain open. 9/12/05 - Cozzy - Spoke to current operator of facility (Auto Dynamics-PBS facility # 2-603539). They have operated this facility since 2000, and have no records of previous cleanup. Spill to remain open.8/2/05 Mike H. spoke with Michael Levine of Mamm Realty, said spill was properly remediated but has no record of it. Emailed Todd McIndoo of Yellowstone requesting info <tmcindoo@optonline.net>, but never got response.Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL" This gasoline spill case has been reassigned from DEC (Sigona) to Rommel on January 7, 2004. DEC SIGONA CALLED MICHAEL ALLETTO AT YELLOWSTONE ON 6/26/98. YELLOWSTONE INDICATED THAT THEY REMOVED ALL THE CONTAMINATED SOILS AND COLLECTED ENDPOINT SAMPLES WHICH ARE BEING TESTED. THE RESULTS WILL BE SUBMITTED TO DEC (SIGONA) WHEN THEY BECOME AVAILABLE.10/2/09 - Austin - Spill transferred from Albany staff to Zhune, for further investigation - end

S105684691

Town: New York City
Acres: 2.500
Date Record Added: 11/30/2000
Date Record Updated: 11/16/2012
Updated By: JAMORAS
Site Description: Location: The site is located in Queens County, on Jackson Ave between Orchard Street to the east, Queens Blvd. to the west and Long Island Railroad yard to the south. The G-Train runs underneath Jackson Avenue bordering the site to the north. The nearest residential structure is located approximately 100ft to the west across Orchard street. Site Features: This 2.5 acre site consists of 12 multi-story buildings and associated parking area located in a congested commercial/industrial area of Queens County. The only occupied structure on-site is a NYC Transit Authority building. Current Zoning/Uses(s): The current zoning at the site is Industrial and Retail. The surrounding area is zoned Special Long Island City Mixed Use District (LIC) and is a longstanding mix of residential, commercial, industrial and cultural uses at varying densities. Historical Uses: The site had formerly been used for chemical manufacturing. From 1901-1978, West Chemical Co. owned the property and manufactured commercial and disinfectant products such as disinfectants, insecticides, soaps, floor wax, and paper products dispensing machines. Manufacturing operations employed various chemical substances including creosote, coal and acids, cresylic acids, degreasing solvents, iodine, and assorted oils and pesticides. Metal plating and gasoline filling operations were also conducted at the property. In 11/78, Outlet City acquired title to the property from West Chemical. During Outlet City's ownership, a flea market and various vendor operations have been conducted at the property. The site is being investigated under the Voluntary Cleanup Program (VCP) under a 1997 agreement. Previous investigations in the late 1980's and early 1990's led to the property entering the VCP. Site Geology and Hydrogeology: Site geology consists of mostly sand at varying depths due to presence of shallow bedrock. Groundwater is approximately 8 -10ft below grade
Env Problem: Nature and Extent of Contamination: The site is contaminated with creosote, petroleum, and solvents. Both soil and groundwater are affected. The majority of the contamination is located in Areas D and E where Creosote in the form of both LNAPL (Light Non-Aqueous Phase Liquid) and DNAPL (Dense Non-Aqueous Phase Liquid) is present. LNAPL in Area D & E ranges from 0 - 6ft. Total on-site VOCs (Volatile Organic Compounds) including both chlorinated hydrocarbons and petroleum constituents are present in groundwater from non-detect - 30,000ppb. Total on-site SVOCs (Semi-Volatile Organic Compounds) are present in groundwater from non-detect to over 100,000ppb. An off-site investigation has not been completed at this site. A ventilation IRM is in place in the basement of building No. 4, where creosote LNAPL enters the basement during large rain events. The ventilation system was designed and installed in 2004. The ventilation system was started up on June 8, 2004. The final engineering report for this IRM was approved in September 2006. Bi-annual air testing is collected to evaluate the effectiveness of the ventilation IRM.
Health Problem: Exposures to contaminated groundwater is not expected because the area is served by public water. Soils contaminated with tetrachloroethene are beneath the site, however, exposure to this soil is not expected because the site is capped with asphalt. Indoor air

samples collected in a portion of the on-site building contained levels of tetrachloroethene that exceeded the New York State Department of Health Guideline for tetrachloroethene in Indoor Air. NYSDOH and NYSDEC will evaluate the need for additional investigations to determine the potential for soil vapor intrusion into structures near the site.

was detected in any monitoring wells. Per DEC's approval, the air sparge (AS) and soil vapor extraction (SVE) systems were turned off on May 3, 2002. Prior to turning the system off, an air effluent sample was collected from the SVE system for BTEX and VOC analyses. The analytical results showed that the concentrations of Benzene, Toluene, Ethylbenze and Xylene on all of the monitoring wells with the exception of MW-10 were found not detected (ND). The maximum concentration of BTEX is on MW-10 at 28,9 ppb. The concentrations of MTBE ranged from 1.6 ppb (MW-7) to 62 ppb (MW-8). See also spill 9700124. Rommel.05/09/05-File Update by Sun: A project review meeting was held on 05/05/05 between the Department, the Hess' Manager and Hess' consultant (EnviroTrac). Per EnviroTrac, Monitoring Well MW-8 appears to have been destroyed during construction activities in the sidewalk area adjacent to the location. A replacement well for MW-8 will be installed once the necessary permits are obtained from the New York City Department of Transportation (NYSDOT). EnviroTrac will inject calcium peroxide in the northern sidewalk of 38th Avenue to address the trace concentrations of MTBE detected in MW-8 in the past few times the well was sampled. The newly installed replacement well will be used to determine the effectiveness of the calcium peroxide injection. If concentrations of MTBE decrease to approximately 30 parts per billion (ppb), site closure will be proposed as discussed during an April 21, 2004 meeting between Hess, EnviroTrac and the Department. (WJS) 10/28/05: Project reassigned from Sun to Andersen. Monitoring report overdue. Need update on results of injecting calcium peroxide into MW-8. 11/21/05: NFA letter sent. contaminated soil discovered during tank removal

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"3/11/2003 Sangesland responded to the site of an ECO/Police action at a junk yard.Site has been an active "Auto Parts" facility for approx 2 years. Site is an irregular T shaped lot (approx 120' x 200')Cement/asphalt appears to cover majority of the lot, unknown if this ground cover is complete and impervious to surface spills. No obvious floor drains could be seen. Unknown if rainwater, auto fluids run into the ground or directly off site. Central area of the yard appears to be the car dismantling area and contains the majority of the spilled auto fluids (oil, transmission fluid, etc.) There is no controled spill containment area (no curbing, collection tank etc). Perimeter of yard was lined primarily with automobile racks (3 cars high). Ground staining appeared weathered and less severe than in the central area.Along with automotive liquids, the yard contained a large number of engines, transmissions, various engine parts and multiple automobile batteries (several appeared damaged and overturned).DEC Requirements:1) Surface of the yard must be cleaned down to the cement/asphalt level. An integrity inspection will be made to determine if there are any floor drains or open cracks directly to the ground below.2) A "Site Delineation" will be required at the property. A series of soil borings will be taken in a grid pattern over the area of the yard and soil/water samples tested to EPA Method 8260, 8770 & heavy metals.3) Based on the results of the "Site Delineation", a "Site Remediation Plan" will need to be prepared which will identify the procedure to clean up the contamination identified in the delineation.4/11/2003 - The owner of the property is believed to be "Virginia" 516-383-9358. She is somehow associated with "Yardley Associates". A call was made to this number in an attempt to get a mailing address, but no response was recieved.Lease holder to the site is: Jussain Zulfiqar and/or Anwar Javed.5/7/2003 Sangesland spoke with Virginia Lupoli (owner) She inherited the property from her father. Yardley Associates LLC is the corporate name for the owner.Sangesland outlined the work which will be required on this site. 1) Power wash the lot to determine the condition of the black top or cement pavement2) Geo Probe of site to determine the subsurface condition of the site.3) A 60 day limit will be put in the letter.4) A list of state contractors will be forwarded with the letterContact info:Yardley Associates LLCAttn: Virginia LupoliP.O. Box 237Cold Spring Harbor, NY 11724Fax # 631-385-447711/4/2003 Sangesland reviewed an Environmental Site Assessment for this site prepared by Dr. Norman Munroe (917-497-0190) of Astem Labs Inc. Report states that the entire site is capped with a cement pad between 8" and 24" thick. There did not appear to be any open preferential pathways directly to the soil. The report did not outline the path for rain water runoff or recharge.Report outlines soil boring work done on the

site along with some ground water sampling. Some minor soil VOC hits (BTEX) in BH-2, BH-4 and BH-9. One minor groundwater hit for Benzene & MTBE in BH-4. SVOC's for soil and water were below regulatory limits. Heavy metal concentrations in soil samples exceeded regulatory limits for several metals including: lead, arsenic, cadmium, chromium and copper. Based on this information, the case is closed with no further action required.

Remarks: DEC SPILLS GROUP CALLED TO SITE OF POLICE ACTION AT A JUNK YARD. SITE HAD SPILLS OF AUTO RELATED LIQUIDS OVER ENTIRE YARD AREA.

DEC Memo:

On 7/14/05, J Peck called RIR Com. Cynthia Roby doesn't work there now. Left mesasage to return call concerning spill. Could not determine owner of property from Property Shark or Acris. Called George Falidas on 7/14/05, left message to call back. On 1/19/05, reattempted to determine owner of property. No success. 3/30/07 - Austin - Trasferred to Ketani for further review - end5/21/07 - Raphael Ketani. I reactivated the case today. There was very little in the case file. Some printed pages for spill #0305345 (which doesn't pertain to the case, except the memo from Mr. Sigona to Mr. Hassan), an 11/7/05 letter from Joseph Peck of DEC to George Faildas regarding the spill, printouts from Google Earth and Property Shark, and a printout of the spill report for this case.I did a search of ACRIS, the NYC Property Tax database, and Property Shark and determined that 25-15 Queens Plaza North is just one part of the range of properties (25-01 to 25-27 Queens Plaza North) owned by Falidas Associates. It is also known by Bridge Plaza North. The block and lot are: 00415 and 0004. I called up George Falidas (718) 392-0514 of Falidas Associates and was connected to his brother, John Falidas.I made a field visit and met John Falidas. He showed me the basement of one of the properties owned by Falidas Associates and which is near to where the tank failed 2 buildings away. We entered a work room rented by a garment making company. The floor and walls and bathroom were clean. There were no signs of oil and no oil odors. Mr. Falidas said that he had paid lots of money to get the oil cleaned up years ago and the responsible party never paid anything to him. Mr. Falidas had a package of documents from the EPA and the DEC and showed them to me. These were the RCRA Subtitle C Site Identification Form, letters from South Mall Analytical Labs to PTC, and a DEC Spill Report. He gave me copies of these documents. I was particularly interested in the old DEC spill report form as this document wasn't in the case file.Next, I visited the 2 story building between Mr. Falidas' building and the site of origin of the spill. I met Sandro

Cestaro of Atlantic Precious Metal Casting, Inc. (718) 937-7100. He showed me his basement. There were some signs of a thin film of mud in one corner of the basement, but no signs or odors of oil, even though this was the building where the oil first entered. Lastly, I went to the site of the oil spill. The auto parts service place had burned completely, according to the old spill report case notes. This site was 41-22 to 41-30 27 Street. The site was sold to developers who later built an apartment building that was finished in early 2007. This building is listed as 41-28 27 Street. I met the super., Leonardo Colon. He took me to the lowest point in the building. This was a parking garage. There were no signs of oil nor any odors. He said he was new here and didn't know much about the building. The building management company is Golden Management and the contact person is Brandon Wechsler (718) 230-2600, ext 111. I took 3 pictures of the apartment building and the neighboring properties. I remember seeing the dig out for the foundation for the building when I passed by the site many months back. They went down below the bottom of the foundation for the neighboring building which contains Atlantic Precious. This is a depth of about 15 feet or so. Based upon my site visits and the fact that the old auto parts area has been dug out, and the lack of evidence of a spill, I am closing the spill case.

Remarks: SPILL AT A COMMERCIAL BLD CALLER IS A TENANT AND REQ A CALL FROM DEC SPILL HAS NOT BEEN CLEANED UP BEEN SMELLING THIS FOR ABOUT 3 WEEKS

DEC Remarks: Spill cleanup being supervised under voluntary cleanup agreement. IRM is under review. Proposed work plan to enhance IRM submitted to DEC on March 28, 2000. The site was inspected by NYSDOH, and DEC to address elevated levels of VOAs. There is presence of ben ene in soils and groundwater, and seepage into basement level. There is significant amt of free product from historical spill of creosote solvent previously stored at site. DEC Ha Waste and DEC Spills working on remediation project. Also see spill no. 9600688 for further

SHWS:

Program: HW
Site Code: 58713
Classification: SIGNIFICANT THREAT TO THE PUBLIC HEALTH OR ENVIRONMENT - ACTION REQUIRED.
Region: 2
Acres: 1.000
HW Code: 241028
Record Add: 11/18/1999
Record Upd: 03/19/2012
Updated By: JAQUINN

Site Description: LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge. SITE FEATURES: The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grand masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level. CURRENT ZONING/USE(S): The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site. HISTORICAL USE(S): National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST. OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination. SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

Env Problem: NATURE AND EXTENT OF CONTAMINATION: Based upon investigations to date, the primary contaminants of concern at the site include toluene. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000s ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated. These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well. The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Possible site impacts to the East River have not been assessed at this time. SPECIAL RESOURCES IMPACTED/THREATENED : None known. SIGNIFICANT THREAT: A significant

1000259753

Health Problem: threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.

Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/01/2012	Source: EPA
Date Data Arrived at EDR: 10/11/2012	Telephone: N/A
Date Made Active in Reports: 12/20/2012	Last EDR Contact: 03/01/2013
Number of Days to Update: 70	Next Scheduled EDR Contact: 04/22/2013
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/01/2012	Source: EPA
Date Data Arrived at EDR: 10/11/2012	Telephone: N/A
Date Made Active in Reports: 12/20/2012	Last EDR Contact: 03/01/2013
Number of Days to Update: 70	Next Scheduled EDR Contact: 04/22/2013
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/02/2012	Source: EPA
Date Data Arrived at EDR: 11/28/2012	Telephone: 703-412-9810
Date Made Active in Reports: 01/07/2013	Last EDR Contact: 03/01/2013
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/10/2013
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 07/31/2012	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/09/2012	Telephone: 703-603-8704
Date Made Active in Reports: 12/20/2012	Last EDR Contact: 01/11/2013
Number of Days to Update: 72	Next Scheduled EDR Contact: 04/22/2013
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 11/02/2012	Source: EPA
Date Data Arrived at EDR: 11/28/2012	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013

Next Scheduled EDR Contact: 04/15/2013
Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013
Date Made Active in Reports: 02/27/2013
Number of Days to Update: 12

Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013
Date Made Active in Reports: 02/27/2013
Number of Days to Update: 12

Source: Environmental Protection Agency
Telephone: (212) 637-3660
Last EDR Contact: 02/15/2013
Next Scheduled EDR Contact: 04/15/2013
Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013
Date Data Arrived at EDR: 02/15/2013
Date Made Active in Reports: 02/27/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/19/2012	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2012	Telephone: 703-603-0695
Date Made Active in Reports: 02/27/2013	Last EDR Contact: 12/10/2012
Number of Days to Update: 63	Next Scheduled EDR Contact: 03/25/2013
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/19/2012	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2012	Telephone: 703-603-0695
Date Made Active in Reports: 02/27/2013	Last EDR Contact: 12/10/2012
Number of Days to Update: 63	Next Scheduled EDR Contact: 03/25/2013
	Data Release Frequency: Varies

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/09/2005	Source: Department of the Navy
Date Data Arrived at EDR: 12/11/2006	Telephone: 843-820-7326
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 02/18/2013
Number of Days to Update: 31	Next Scheduled EDR Contact: 06/03/2013
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2012	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/17/2013	Telephone: 202-267-2180
Date Made Active in Reports: 02/15/2013	Last EDR Contact: 01/17/2013
Number of Days to Update: 29	Next Scheduled EDR Contact: 04/15/2013
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SHWS: Inactive Hazardous Waste Disposal Sites in New York State

Referred to as the State Superfund Program, the Inactive Hazardous Waste Disposal Site Remedial Program is the cleanup program for inactive hazardous waste sites and now includes hazardous substance sites

Date of Government Version: 11/19/2012	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/20/2012	Telephone: 518-402-9622
Date Made Active in Reports: 12/12/2012	Last EDR Contact: 02/20/2013
Number of Days to Update: 22	Next Scheduled EDR Contact: 06/03/2013
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

VAPOR REOPENED: Vapor Intrusion Legacy Site List

New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

Date of Government Version: 05/01/2012	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/23/2012	Telephone: 518-402-9814
Date Made Active in Reports: 07/03/2012	Last EDR Contact: 02/20/2013
Number of Days to Update: 41	Next Scheduled EDR Contact: 06/03/2013
	Data Release Frequency: Varies

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: Facility Register

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 01/07/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 01/09/2013	Telephone: 518-457-2051
Date Made Active in Reports: 01/16/2013	Last EDR Contact: 01/07/2013
Number of Days to Update: 7	Next Scheduled EDR Contact: 04/22/2013
	Data Release Frequency: Semi-Annually

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Date of Government Version: 11/19/2012	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 11/20/2012	Telephone: 518-402-9711

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Number of Days to Update: 79	Next Scheduled EDR Contact: 03/25/2013
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Most Recent Revision: 1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

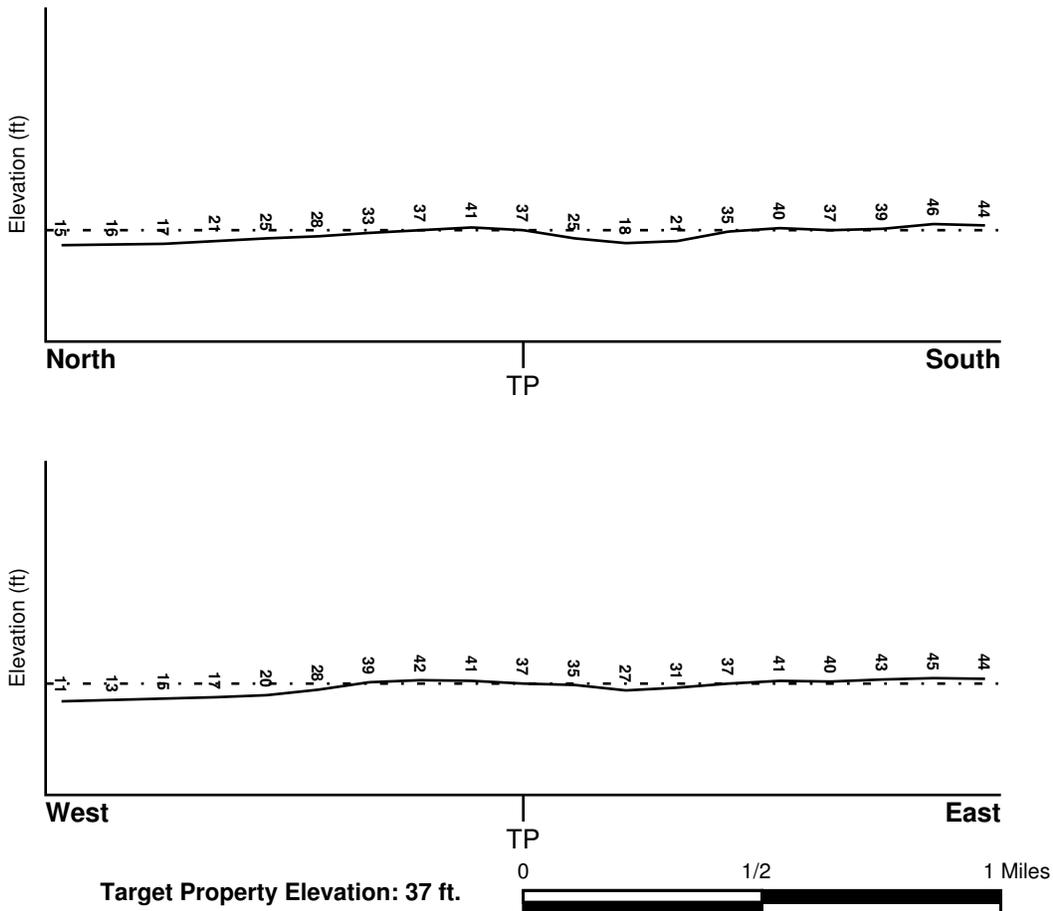

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

As an authorized representative of the above named facility, I affirm under penalty of perjury that the information displayed on this form is correct to the best of my knowledge. Additionally, I recognize that I am responsible for assuring that this facility is in compliance with all sections of 6 NYCRR Parts 612, 613 and 614, and applicable sections of 6 NYCRR Subpart 360-14 (used oil tanks only), not just those cited below.

- The facility must be re-registered if there is a transfer of ownership
- The Department must be notified within 30 days prior to adding, replacing, reconditioning, or permanently closing a stationary tank
- The facility must be operated in accordance with the code for storing petroleum, 6 NYCRR Part 613.
- Any new facility or substantially modified facility must comply with 6 NYCRR Part 614.
- This certificate must be signed and posted on the premises at all times. Posting must be at the tank, at the entrance of the facility, or the main office where the storage tanks are located.
- Any person with knowledge of a spill, leak or discharge must report the incident to DEC within two hours (1-800-457-7362).

College Point, New York 11356

RE: Limited Subsurface Investigation for the Property Located at 31-05 38th Avenue, Astoria, New York (Z.A.D. Service Station).

Dear Mr. Klein:

CORE Environmental, Inc. (CORE) has prepared this letter to summarize the results of the Limited Subsurface Investigation (LSI), performed at the above referenced site. The purpose of the LSI was to determine if the subsurface soil and groundwater has been impacted by historical operations of the property as a gasoline and diesel filling station.

Soil borings were completed in order to collect soil samples and a groundwater sample to evaluate sub-surface conditions in the area surrounding the active underground storage tanks, fueling island, and a previously abandoned fill line. This letter report summarizes site investigation activities, soil and groundwater sampling and laboratory analysis.

Summary of Attachments

A site location map, Figure 1, was prepared and is included in Attachment 1. Also included in Attachment 1 is a Soil Boring Location Plan, Figure 2. Soil Boring Logs are included in Attachment 2. A summary of the soil and groundwater analytical results is presented in Attachment 3. The analytical reports for the soil and groundwater samples are included as Attachment 4.

Soil Boring Activities

On December 11, 2012 CORE completed three (3) soil borings. The soil borings were located in close proximity to areas of concern. Boring B-1 was located south of the operational underground storage tanks, just west of the fueling island. Boring B-1 was advanced to a total depth of 28 feet below ground surface. Boring B-2 was located south of the fueling island, 5 feet west of an abandoned fill line. Boring B-2 was advanced to 24 feet below ground surface. Boring B-3 was located 2 feet northwest of the underground storage tanks. Boring B-3 was advanced to a depth of 24 feet below ground surface.

The soil borings were completed utilizing a hydraulic-powered direct push probe sampler (SIMCO Earthprobe 200). CORE's field geologist oversaw the completion of the soil borings. Soil samples were collected utilizing a four foot long, two-inch diameter macro-core sampler with liner. All macro-core liners were examined for visual evidence of contamination (i.e. staining, discoloration) and any olfactory indications (i.e. odors). In addition soils were screened using a calibrated photoionization detector (PID) to qualitatively screen the soils for Volatile Organic Compounds (VOCs). In general, the first macro core encountered fill material consisting of concrete, gravel, fine to medium sand,

consistent with urban fill. Below a depth of three-feet, coarse brown sand was encountered. Groundwater at the site was found to be at 23 feet below ground surface.

Soil Sampling Activities

Two soil samples for laboratory analysis were collected from each boring. There were no elevated PID readings detected in any of the soil samples recovered. Soil samples were collected from a depth of 12 feet and 23 feet (just above the water table) for laboratory analysis. Soil samples were transferred from the macro core liners to laboratory provided sample containers and preserved with ice.

Groundwater Sampling Activities

One groundwater sample was collected from a temporary well consisting of a 1 inch diameter polyvinyl chloride (PVC) constructed riser pipe with a 10 foot section of slotted screen pipe. A peristaltic pump with new polyethylene tubing was used to sample the groundwater.

Sample Analysis

All samples were preserved at 4° degrees Celsius in a cooler with ice prior to and during shipment. Chain-of-Custody documentation accompanied the samples during shipment. The samples were sent to a New York State Department of Health certified laboratory for the analysis. York analytical Laboratories Inc. (ELAP Number 10854) performed the analysis on all the samples. Soil samples were analyzed for New York State Department of Environmental Conservation (DEC) CP/51 Soil Cleanup Guidance memorandum Volatile Organic Compounds (VOCs) and Semi-Volatile Organic Compounds (SVOCs) using EPA methods 8260 and 8270. The groundwater sample was analyzed for VOC's only.

Soil Sample Results

SVOCs were detected in soil boring sample SB-2-12. Benzo(a)anthracene, Chrysene, and Pyrene were detected at 73, 86, and 94 micrograms per kilogram, but did not exceed DEC Standards and Guideline Values (SGVs) from CP-51 / Soil Cleanup Guidance of 1, 1, 100, grams per kilogram respectively. A summary of the analytical results of the soil samples and the SGVs is presented in Table 1.

Groundwater Sample Results

Analytical results indicate that VOCs were detected in the groundwater sample collected from SB-1-GW. Methyl tert-butyl ether (MTBE) and Toluene were detected at 1.8 and 1.6 micrograms per liter, but not in concentrations in excess of the DEC Division of Water Technical and Operational Guidance Series (1.1.1) Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations of 10 and 5 micrograms per liter respectively. A summary of the analytical results of the soil samples and the SGVs is presented in Table 2.

46-11 54th Avenue Maspeth, NY 11378 ♦ Phone: 718.762.0544 ♦ Fax: 718.762.0545
2312 Wehrle Drive, Buffalo, NY 14221 ♦ Phone: 716.204.8054 ♦ Fax: 716.204.8557

Conclusions and Recommendations

Field screening and laboratory analysis of soils and groundwater at the site do not indicate that the current or historical operations at the site which includes a gasoline and diesel fueling station have impacted the subsurface soil and groundwater at the site. Based on the findings of this LSI, CORE recommends no additional investigative or remedial activities.

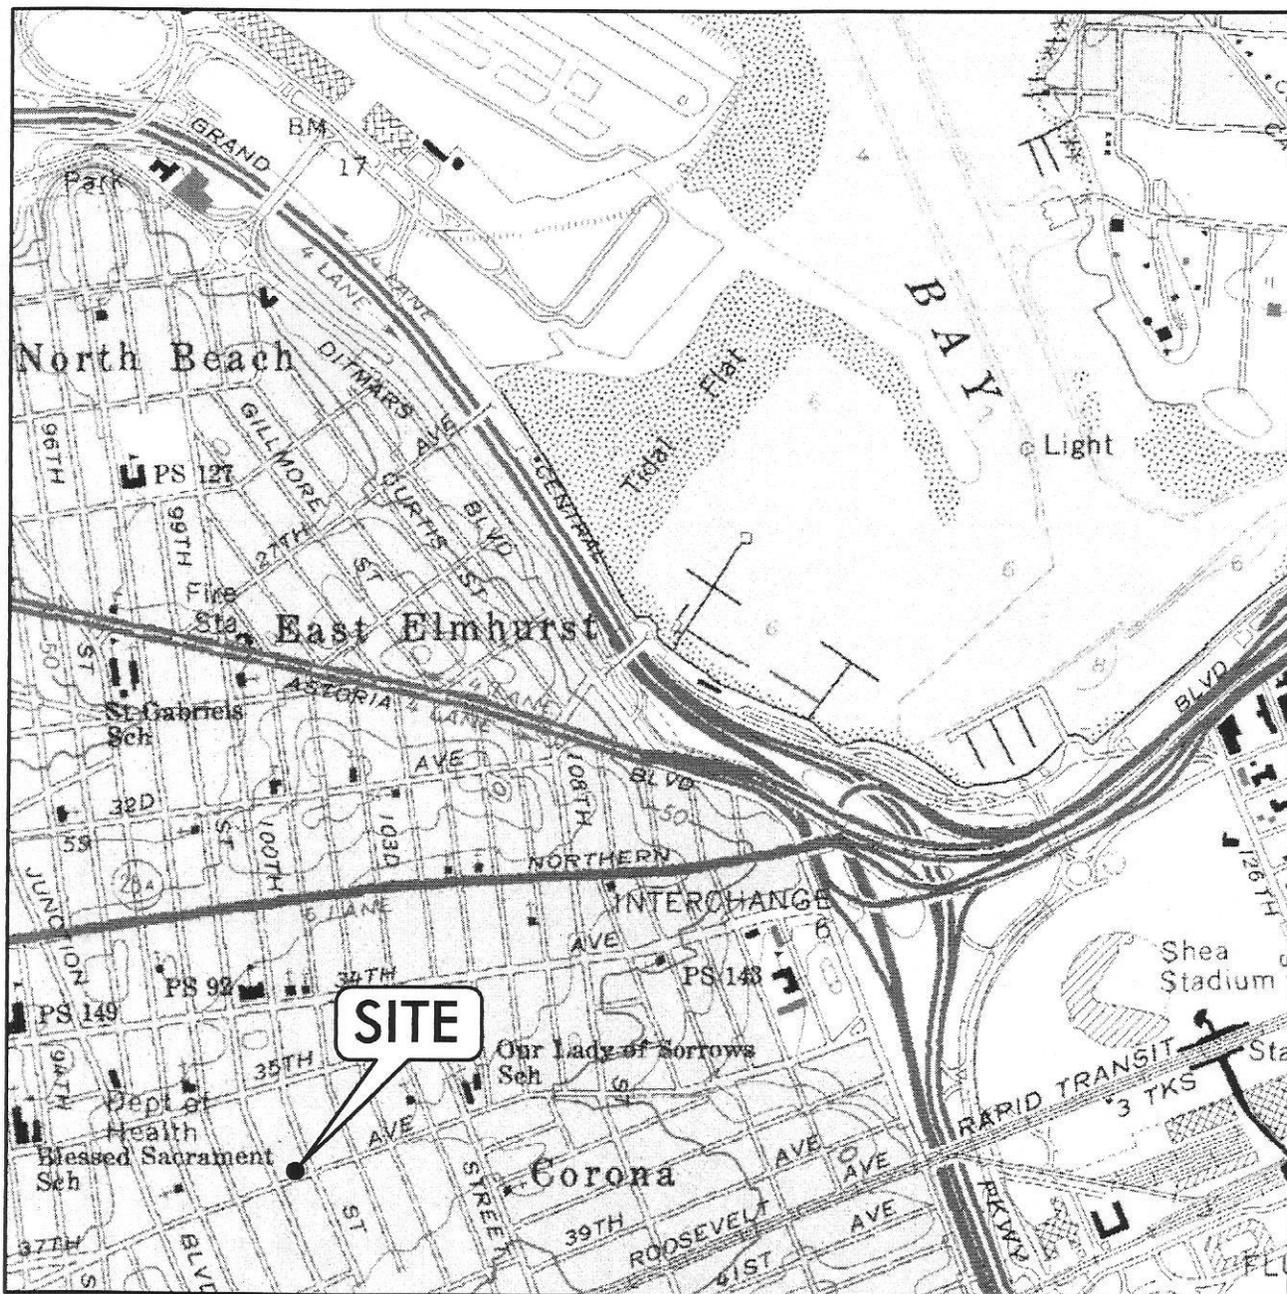

Sincerely,

CORE Environmental Consultants, INC.

1.0 EXECUTIVE SUMMARY

Alma Bank authorized NOVA Geophysical & Environmental Services (NOVA) to perform a Phase II Subsurface Site Investigation of the commercial property located at 31-05, 31-07 38th Avenue, Astoria, New York (the "Site"). The Site consists of three attached one-story buildings (3) with an asphalt-paved area, located on an approximately 13,865 square feet parcel of land.

The purpose of NOVA's investigation was to determine if soil and groundwater quality had been adversely impacted by historical or current operations at the Site. The site is located within the Astoria/Long Island City Section of Queens. The following work scope has been developed in response to Phase I ESA findings, as at risk for due-diligence. According to the New York City Department of Buildings (NYCDOB) Records, on March 11, 2005, an "E" designation was effective for the Site. Based on these concerns, a Phase II was conducted by NOVA, to evaluate soil quality beneath the Site.

Geophysical Survey

NOVA conducted a geophysical engineering survey (GES) to determine if there are any current and former underground storage tanks (USTs), former septic system (if any), and oil/water separator (if any) located at the Site. The geophysical survey identified three abandoned (known) USTs and two (2) on-site gasoline USTs at the project site. According to the New York State Department of Environmental Conservation (NYSDEC) petroleum bulk storage division (PBS), these USTs were already properly closed-in place in September 8, 1997. The Copy of the closure report along with the NYSDEC and FDNY certifications are included within appendix of this report. No other USTs or oil/water separator were identified during the survey. Also NOVA cleared and marked all of the proposed environmental boring locations at the Site.

Soil Investigation

A total of ten (10) soil borings were installed at the project site. Soil samples were collected from each boring at depths of 0-2 feet below ground surface (bgs) and 18 to 20 feet bgs. All soil samples were analyzed for the presence of volatile organic compounds (VOCs) by Method 8260, semi-volatile organic compounds (SVOCs) by Method 8270, and TAL metals (methods 6210 & 7491) and Pesticides/PCBs (Method 8081/8082).

The soil laboratory results indicated that none of the site soil samples contained VOCs, SVOCs, TAL metals and Pesticides/PCBs compounds above the New York State Department of Conservation (NYSDEC) 6 NYCRR Part 375- Brownfield-Residential Soil Cleanup Objectives (NYSDEC 6 NYCRR BRSCO), and Eastern USA Background Levels (EUBL).

Groundwater Investigation

No groundwater samples were collected during the Phase II Investigation since groundwater was not encountered during the advancement of the borings to a maximum depth of 20 feet.

Conclusions/Recommendations

Field observations and soil sampling analytical results indicate that there is no evidence of a "spill" requiring reporting to NYSDEC. None of the soil samples contained elevated concentrations of VOC's, SVOCs, TAL metals and PCBs that exceed NYSDEC 6 NYCRR BRSCO. Therefore no further investigation is recommended at this time.

2.0 INTRODUCTION

NOVA Geophysical & Environmental Services (NOVA) performed a Phase II Environmental Site Investigation of a commercial property located at the main address of 31-05 and 31-07 38th Avenue and 37-33 31st Street, in Long Island City, Queens, New York. This site has the following alternative addresses:

31-01 to 31-07 38th Avenue
37-33 to 37-35 31st Street
37-41 31st Street
31-39 38th Avenue
37-37 to 37-39 31st Street

The property consists of a 13,865 SF lot identified as Block 373, Lot 1 in the Long Island City section of Queens, New York. This site consists of three buildings, identified throughout the report collectively as “the subject site” or “the site.” In addition, the areas of the site are identified as the following:

Unit 1

Located at address 37-33 31st Street:

Developed with a one-story commercial building with approximately 2,000SF of space, which has been occupied by a metal works company for the past five years.

Unit 2

Z.A. & D Service & Gasoline Station

Located at 31-05 38th Avenue:

This part of the site is developed with a one-story commercial building with a paved lot that is used as a gas station. The site building consists of approximately 2,000SF of space and the paved parking area that houses the gasoline underground storage tanks (USTs), pump islands, and parking lot consists of approximately 5,000SF of space.

Unit 3

ARISAM Auto Collision

Located at 31-07 38th Avenue:

This part of the site is developed with a one-story commercial building that has approximately 6,000SF of space that is used as an auto-body shop with an associated auto painting area and.

2.1 Project Scope of Work

The Project Scope of Work included the NYC DEP approved activities:

- Prior to the initiation of subsurface activities, *New York One Call* was contacted in order to assure that no subsurface utility services associated with the current operations were encountered during drilling activities.
- Geophysical Engineering Survey (GES) survey was performed to identify and locate unknown subsurface structures such as any other abandoned USTs, oil/water separator that may be present at the subject site. Additionally, all of the proposed environmental boring locations were cleared and marked to ensure the drilling areas were safe and free of underground utilities or other subsurface structures.
- A total of ten (10) soil borings (SB-1 through SB-10) were advanced throughout the Site. Soil samples were collected for laboratory analysis from all borings at the depth intervals 0-2' bgs and 18 to 20 feet bgs and from the interval depth that exhibited the greatest PID reading during field activities.
- The two sets of samples collected from each of the ten (10) soil boring locations were sent to Laboratories, a New York State Certified laboratory, analyze for the presence of volatile organic compounds (VOCs) by Method 8260, semi-volatile organic compounds (SVOCs) by Method 8270, and TAL metals (Method 6010 & 7491) and Pesticides/PCBs (Method 8081/8082).
- Preparation of a report summarizing the findings and conclusions will be prepared that will include figures depicting soil boring and soil vapor sample locations, and other significant Site features.

3.0 FOCUSED SUBSURFACE SITE INVESTIGATION

3.1 Geophysical Survey

On November 7th, 2013, NOVA conducted a geophysical engineering survey (GES) at the Site. The purpose of this investigation was to identify any former or abandoned USTs, to determine the location of former septic system (if any), oil/water separator (if any) and to clear and mark proposed environmental boring locations at the Site.

A ground penetrating radar (GPR) system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation. This system is capable of transmitting electromagnetic energy in the frequency range of 16 MHz to 1000 MHz. The GPR used in this process was a Noggins model with a 250 MHz antenna.

During this investigation, three abandoned USTs (550-gallon) were identified. According to the NYSDEC petroleum bulk storage division-(PBS), these USTs were already properly closed-in place in September 8, 1997. The Copy of the closure report along with the NYSDEC & FDNY certifications are included within appendix of this report.

Additionally two (2) gasoline USTs were also identified at the project site. No other substructures or USTs were identified at the Site. NOVA additionally cleared and marked all of the proposed environmental boring locations at the Site.

3.2 Soil Sample Collection Procedures and Field Observations

On November 13th, 2013 NOVA advanced a total of ten (10) soil borings throughout the Site. Continuous soil sampling was taken for all ten (10) boring locations till twenty (20) feet bgs or refusal was encountered. Refer to Figure 1 for the Soil Boring Location Map, which illustrates these boring locations.

No visible, olfactory or PID readings indicating that contamination or evidence of petroleum impact was present or identified during our Site investigation.

Utilizing Geoprobe equipment, each soil boring was continuously advanced in 5-foot intervals to selected depths. Selected intervals were field screened for evidence of contamination. All soils were physically evaluated for visual and olfactory evidence of contamination. Additionally, all soils were field screened with a photoionization detector (PID) for the presence of any volatile organic vapors. All PID readings were

“non-detected.” The soil borings were advanced to 20’ below ground surface (bgs). No groundwater was encountered during the advancement of the soil borings. Samples were collected from selected intervals and submitted for laboratory analysis. Two (2) soil samples were collected from each boring; from 0-2’ bgs and 18-20’ bgs. The Site soils consisted of fill materials with bricks, cobbles, brown medium size sand. No groundwater was encountered during the installation of these soil borings.

Generally accepted industry practices and New York State Department of Environmental Conservation (NYSDEC) guidelines for sampling procedures were followed during investigation and sampling activities. Following sample collection, boreholes were backfilled with soil cuttings and capped with bentonite, concrete, and/or asphalt patch.

3.2 Groundwater Sample Collection Procedures and Field Observations

No groundwater was encountered in any of the borings advanced to 20’ bgs. Therefore, no groundwater samples were taken at the Site.

4.0 Results of Laboratory Analyses

4.1 Soil Sample Results

A complete copy of the laboratory report from the soil sampling program is provided in Appendix C. The soil sample results are summarized in Table 1. The results were compared to the New York State Department of Conservation Recommended Soil Clean Up Objectives, 6 NYCRR Part 375. Soil results are presented in parts per million (ppm).

According to the laboratory report, no VOCs, SVOCs, PBCs, TAL Metals or Pesticides were detected in the soil samples taken at the site.

The following SVOCs were found in one or more of the twelve soil samples on site:

Benzo (a) anthracene, Phenanthrene, Chrysene, Fluoranthene, Pyrene and 2-Methylnaphtalene. According to the laboratory analytical results, none of these compounds were detected above the NYSDEC 6 NYCRR Part 375 Residential Soil Cleanup Objectives (BRSCOs). (See Table-1).

The following TAL Metals were found in one or more of the twenty soil samples on site:

Aluminum, Arsenic, Barium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Sodium, Vanadium, and Zinc. However none of the TAL metals contained concentrations above the NYSDEC 6 NYCRR Part 375 BRSCOs.

4.2 Groundwater Sample Results

No groundwater samples were taken as part of this Phase II since groundwater was not encountered during the advancement of the soil borings.

5.0 CONCLUSIONS/RECOMMENDATIONS

Field observations and soil sampling analytical results indicate that there is no evidence of a "spill" requiring reporting to NYSDEC. None of the soil samples contained elevated concentrations of VOC's, SVOCs, TAL metals and PCBs that exceed NYSDEC 6 NYCRR BRSCO. Therefore no further investigation is recommended at this time.

7.0 LIMITATIONS OF THE FOCUSED SUBSURFACE SITE INVESTIGATION

NOVA has prepared this Focused Subsurface Site Investigation in accordance with the contract scope of work, using reasonable efforts to attempt to identify areas of potential liability associated with recognized environmental conditions in the Site. Any survey for the presence soil or groundwater contamination in the Site was focused in nature. The survey may not be relied upon as a comprehensive investigation for the presence of such contamination in all areas of the Site or as meeting any standards established for conducting such surveys. NOVA has made no independent investigation of the accuracy of these secondary sources and has assumed them to be accurate and complete. NOVA does not warrant the accuracy or completeness of information provided by secondary sources. NOVA does not warrant that contamination that may exist on the Site has been discovered, that the Site is suitable for any particular purpose or that the Site is clean or free of liability. Any cost estimates are based on general comparisons with past projects of similar scope and size, and actual costs or design-phase estimates may vary substantially from these estimates.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 6010C

Qualifications:

Analyte is found in the associated blank as well as in the sample.

Analyte & Samples(s) Qualified:

Iron

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)], B054620-BS1, B054620-BSD1, B054696-BS1, B054696-BSD1

Data is not affected by elevated level in blank since sample result is >10x level found in the blank.

Analyte & Samples(s) Qualified:

Iron

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)], B054620-BLK1, B054696-BLK1

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Cadmium

B054620-BS1

SW-846 7471B

Qualifications:

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Mercury

B054589-BS1

SW-846 8082A

Qualifications:

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

Aroclor-1016, Aroclor-1016 [2C], Aroclor-1260, Aroclor-1260 [2C]

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)], B054691-BLK1, B054691-BS1, B054691-BSD1, B054691-MS1, B054691-MSD1

Surrogate recovery is outside of control limits on both columns.

Data validation is not affected since all results are "not detected" and bias is on the high side.

Analyte & Samples(s) Qualified:

Decachlorobiphenyl, Decachlorobiphenyl [2C], Tetrachloro-m-xylene, Tetrachloro-m-xylene [2C]

13G0140-15[SB-8 (0-2)]

SW-846 8260C

Qualifications:

Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possibility of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated.

Analyte & Samples(s) Qualified:

Bromomethane, Chloromethane, Dichlorodifluoromethane (Freon 12), Vinyl Chloride

13G0140-01[SB-1 (0-2)], B054607-MS1

Sample preserved in the laboratory, not in the field as required by the method.

Analyte & Samples(s) Qualified:

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)]

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Naphthalene

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)], B054607-BLK1, B054607-BS1, B054607-BSD1, B054607-MS1

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.

Analyte & Samples(s) Qualified:

1,4-Dioxane, 2-Butanone (MEK), Acetone, tert-Butyl Alcohol (TBA), Tetrahydrofuran

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-04[SB-2 (18-20)], 13G0140-05[SB-3 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-14[SB-7 (18-20)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-17[SB-9 (0-2)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], 13G0140-20[SB-10 (18-20)], B054607-BLK1, B054607-BS1, B054607-BSD1, B054607-MS1

SW-846 8270D

Qualifications:

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

2,4-Dinitrophenol, Benzo(g,h,i)perylene, Benzoic Acid, Dibenz(a,h)anthracene, Indeno(1,2,3-cd)pyrene

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], 13G0140-11[SB-6 (0-2)], B054737-BLK1, B054737-BS1, B054737-BSD1, 13G0140-03RE1[SB-2 (0-2)], 13G0140-04RE1[SB-2 (18-20)], B054909-BLK1, B054909-BS1, B054909-BSD1

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

4,6-Dinitro-2-methylphenol

B054792-BSD1

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.

Analyte & Samples(s) Qualified:

Benzoic Acid

B054792-BS1

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:**Benzoic Acid**

13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], B054792-BLK1, B054792-BSD1

One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.

Analyte & Samples(s) Qualified:**2,4,6-Tribromophenol**

13G0140-13[SB-7 (0-2)]

Surrogate recovery is outside of control limits, matrix interference suspected. Reanalysis yielded similar surrogate non-conformance.

Analyte & Samples(s) Qualified:**2,4,6-Tribromophenol, 2-Fluorophenol, Phenol-d6**

13G0140-03[SB-2 (0-2)], 13G0140-03RE1[SB-2 (0-2)]

Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.

Analyte & Samples(s) Qualified:**2,4-Dinitrophenol, 4-Nitrophenol, Benzoic Acid**

B054737-BLK1, B054737-BS1, B054737-BSD1, B054792-BLK1, B054792-BS1, B054792-BSD1

Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.

Analyte & Samples(s) Qualified:**1,2-Diphenylhydrazine (as Azobenzene), 1-Methylnaphthalene, 2,4-Dimethylphenol, 2-Methylnaphthalene, Aniline, Anthracene, Benzidine, Benzo(k)fluoranthene, Bis(2-chloroisopropyl)ether, Hexachlorocyclopentadiene, Isophorone, Nitrobenzene, N-Nitrosodimethylamine, N-Nitrosodi-n-propylamine, Phenol, Pyrene, Pyridine**

13G0140-06[SB-3 (18-20)], 13G0140-07[SB-4 (0-2)], 13G0140-08[SB-4 (18-20)], 13G0140-11[SB-6 (0-2)], 13G0140-12[SB-6 (18-20)], 13G0140-13[SB-7 (0-2)], 13G0140-15[SB-8 (0-2)], 13G0140-16[SB-8 (18-20)], 13G0140-18[SB-9 (18-20)], 13G0140-19[SB-10 (0-2)], B054792-MS1, B054792-MSD1, B054737-BLK1, B054737-BS1, B054737-BSD1, 13G0140-03RE1[SB-2 (0-2)], 13G0140-04RE1[SB-2 (18-20)], B054792-BLK1, B054792-BS1, B054792-BSD1, B054909-BLK1, B054909-BS1, B054909-BSD1, 13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)]

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:**2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Benzoic Acid, Dibenz(a,h)anthracene, Di-n-octylphthalate, Indeno(1,2,3-cd)pyrene**

B054737-BLK1, B054737-BS1, B054737-BSD1, B054792-BLK1, B054792-BS1, B054792-BSD1, B054909-BLK1, B054909-BS1, B054909-BSD1, 13G0140-01[SB-1 (0-2)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)]

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.

Analyte & Samples(s) Qualified:**Pentachloronitrobenzene**

13G0140-01[SB-1 (0-2)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)], 13G0140-09[SB-5 (0-2)], 13G0140-10[SB-5 (18-20)], B054737-BLK1, B054737-BS1, B054737-BSD1, B054792-BLK1, B054792-BS1, B054792-BSD1

Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:**2,4-Dinitrophenol, 4,6-Dinitro-2-methylphenol, Benzoic Acid, Dibenz(a,h)anthracene, Indeno(1,2,3-cd)pyrene**

13G0140-03RE1[SB-2 (0-2)], 13G0140-04RE1[SB-2 (18-20)], 13G0140-02[SB-1 (18-20)], 13G0140-03[SB-2 (0-2)]

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
t	Wide recovery limits established for difficult compound.
t	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
B	Analyte is found in the associated blank as well as in the sample.
B-07	Data is not affected by elevated level in blank since sample result is >10x level found in the blank.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
L-07	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
L-07A	Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD outside of control limits. Reduced precision anticipated for any reported result for this compound.
MS-07	Matrix spike recovery is outside of control limits. Analysis is in control based on laboratory fortified blank recovery. Possibility of sample matrix effects that lead to low bias for reported result or non-homogeneous sample aliquot cannot be eliminated.
PR-03	Sample preserved in the laboratory, not in the field as required by the method.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
S-13	Surrogate recovery is outside of control limits on both columns.
S-19	Data validation is not affected since all results are "not detected" and bias is on the high side.
S-19	Surrogate recovery is outside of control limits, matrix interference suspected. Reanalysis yielded similar surrogate non-conformance.
V-04	Initial calibration did not meet method specifications. Compound was calibrated using a response factor where %RSD is outside of method specified criteria.
V-05	Continuing calibration did not meet method specifications and was biased on the low side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the low side.
V-06	Continuing calibration did not meet method specifications and was biased on the high side for this compound. Increased uncertainty is associated with the reported value which is likely to be biased on the high side.
V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.
V-20	Continuing calibration did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

CLOSURE REPORT

FOR

**Z A AND D SERVICE STAION, INC.
31-05 38TH. AVENUE
LONG ISLAND CITY, NEW YORK 11101**

1.0 INTRODUCTION

1.1 Purpose of Report

The Franklin Company Contractors, Inc. was retained by Z A and D Service Station, Inc. to provide services for the removal of three (3) 550 gallon underground storage tanks. The tanks were removed by the Franklin Company Contractors, Inc. on September 8, 1997. The purpose of this report to summarize the activities of the tank removals and upgrade.

1.3 Site Background

The Z A and D Service Station, Inc. site (NYC DEC Facility Registration # 2-274763) is located at 31-05 38th. Avenue, Long Island City, New York. The location of the former (3) 550 gallon UST's and the general layout of the site is shown in Figure 1-1.

2.0 TANK REMOVAL ACTIVITIES

2.1 Removed Underground Storage Tanks

The tanks removed under this closure report consisted of three 550 gallon storage tanks USTs. The tanks were removed by Franklin Company Contractors on September 8, 1997.

2.2 Regulatory Contacts

The Franklin Co. Contractors notified NYSDEC and submitted a Petroleum Bulk Storage Application to close the tanks. In addition, the New York City Fire Department (NYFD) was contacted. At the completion of closure activities, an affidavit was submitted to the NYFD by the Contractor indicating the closure was completed.

2.3 Tank Removal

2.3.1 Tank Cleaning

The tanks were uncovered to gain access to the existing bungs. All three tanks were emptied of any remaining product. The tanks were purged of flammable vapors using an educator. After the tanks were safe, access to the interior of the tanks were made using non sparking tools. The interior of the tanks were cleaned using pressure washing , non sparking tools and oil sorbent materials. The non-hazardous oil waste was removed from the tanks and disposed of offsite.

2.3.2 Tank Inspection

The tanks showed no holes by visual inspection from the entrance opening. The tanks were standard 550 gallon tanks 3.5' in diameter X 8' long.

2.3.3 Tank Closure

The tanks were filled to capacity with slurry concrete.

2.4 Soil Screening

Soil sampling was accomplished by Impact Environmental using a Geo Probe. See Appendix A.

2.5 Tank Up Grade

The two remaining tanks on this site were upgraded to meet Federal Standards. The pertinent forms and documents are appended.

3.0 SUMMARY

The closure of three 550 gallon UST's was completed September 8, 1997. Fill and dispensing lines were cleaned and disconnected from the tanks. The tanks were cleaned of residuals and disposed of offsite.

The tanks were in good condition and showed no signs of leakage. The excavation showed no visual signs or soil contamination or soil staining.

Samples of the tank excavation were tested in accordance with EPA Method 8021. Analytical results showed no evidence of petroleum contamination above NYSDEC STARS Guidance Values.

Based on the results of this closure investigation, further investigation of this tank area is not warranted.

Att: Theodore Kalogiannis

RE: Commercial Property
31-05, 31-07 38th Avenue & 37-33 31st Street
Astoria, New York 11101

Dear Mr. Kalogiannis:

Nova Geophysical Services (NOVA) is pleased to provide findings of our geophysical survey at the above referenced project located at 31-05, 31-07 38th Avenue & 37-33 31st Street, Astoria/LIC, NY (the "Site"). Please see attached Geophysical Survey map for more details.

INTRODUCTION TO GEOPHYSICAL SURVEY

NOVA performed a Geophysical survey consisting of Ground Penetrating Radar (GPR) and Electromagnetic (EM) surveys at the Site to identify subsurface anomalies and to clear and mark proposed soil boring locations on November 7th, 2013. The equipment selected for this investigation included Electromagnetic Survey (EM61), Ditch-Witch utility locator, and MALA ground-penetrating radar (GPR) equipped with 250 MHz and 500 MHz shielded antennae

A GPR system consists of a radar control unit, control cable and a transducer (antenna). The control unit transmits a trigger pulse at a normal repetition rate of 250 MHz to 500 MHz. The trigger pulse is sent to the transmitter electronics in the transducer via the control cable. The transmitter electronics amplify the trigger pulses into bipolar pulses that are radiated to the surface. The transformed pulses vary in shape and frequency according to the transducer used. In the subsurface, variations of the signal occur at boundaries where there is a dielectric contrast (void, steel, soil type, etc.). Signal reflections travel back to the control unit and are represented as color graphic images for interpolation.

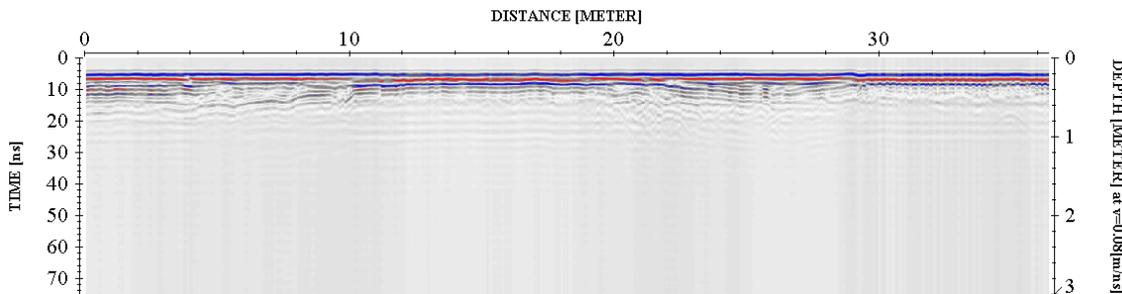

GEOPHYSICAL METHODS

GPR data profiles were collected for the areas of the Site specified by the client. The surveyed area consisted of asphalt improved lot with smaller areas of concrete patches. The whole Site lies on unconsolidated soils, with significant amount of clayey, that acts as “geophysical noise” and causes diffraction patterns not associated with subsurface structures. Despite the problems, we feel that the geophysical study was successful in reconstructing the subsurface and identified subsurface anomalies that need further investigation.

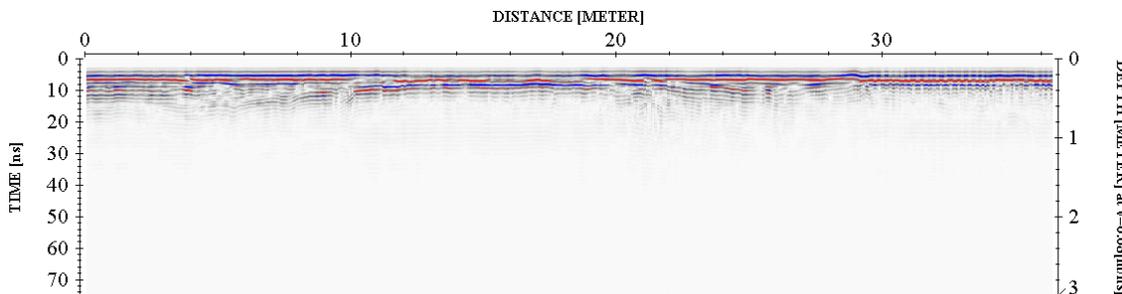

DATA PROCESSING

In order to improve the quality of the results and to better identify subsurface anomalies processed the collected data. The processes flow is briefly described at this section.

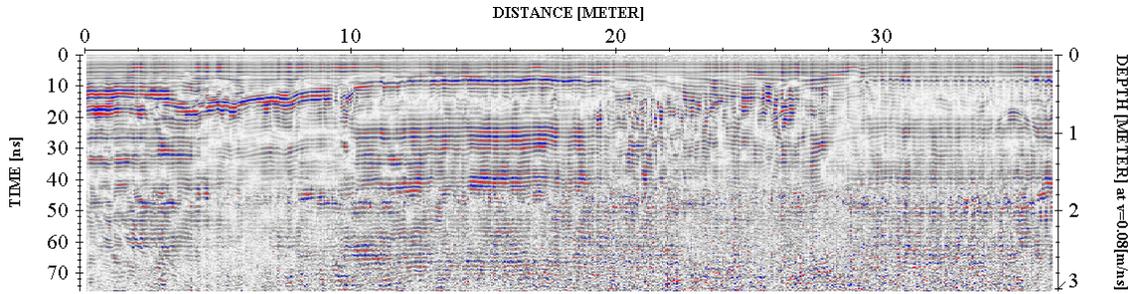

Step 1. Import raw RAMAC data to standard processing format

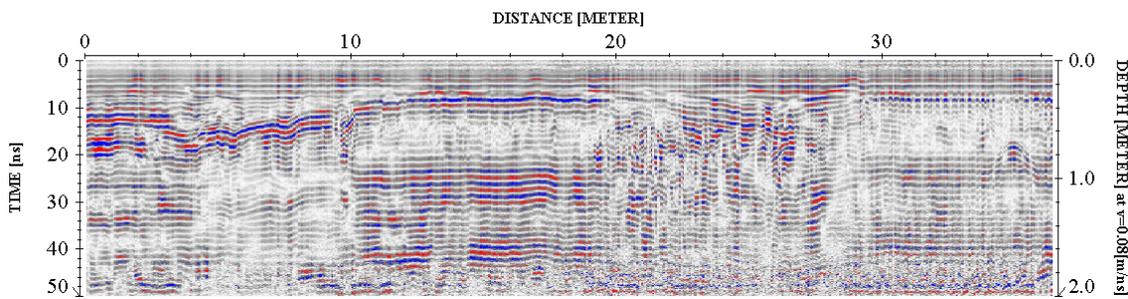

Step 2. Remove instrument noise (*dewow*)

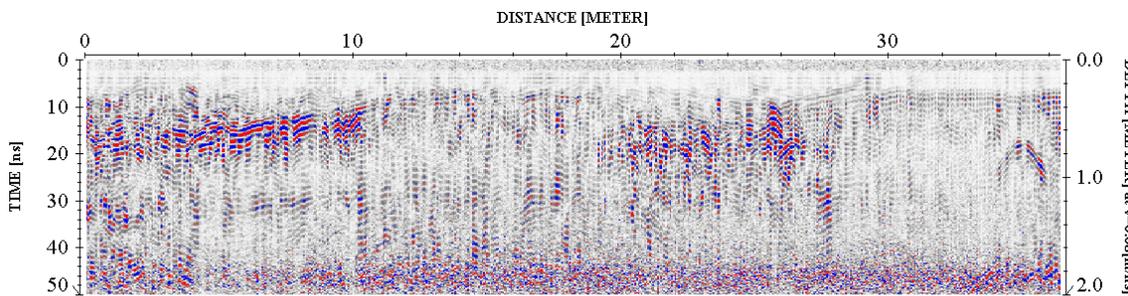

Step 3. Correct for attenuation losses (energy decay function)

Step 4. Remove static from bottom of profile (time cut)

Step 5. Mute horizontal ringing/noise (subtracting average)

The above example shows the significance of data processing. The end image (step 5) has higher resolution than the starting image (raw data – step 1) and more accurately describes the subsurface anomalies.

PHYSICAL SETTINGS

Nova observed following physical conditions at the time of the survey:

The weather: Sunny and clear.

Temp: 38 degrees

Surface: Asphalt and concrete-paved parking lot.

Geophysical Noise Level (GNL): No Excessive Geophysical Noise Level (GNL) was observed at the Site.

RESULTS

The results of the geophysical survey identified following anomalies located at the project Site:

- Geophysical survey identified three (3) underground storage tanks (USTs) underneath the paved parking lot portion of the property. These anomalies were clearly marked during the field survey.
- GES identified additional known two-USTs containing gasoline at the project Site. Further investigation of these USTs with the CSUL indicated that they were associated with the on-site pumps.
- Geophysical survey identified former utility lines such as sewer, electric, gas, telecommunication, etc.,
- Nova cleared and marked all proposed environmental soil boring locations at the site.
- Geophysical Survey Plan portrays the areas investigated during the geophysical survey.

If you have any questions please do not hesitate to contact the undersigned.

Sincerely,

NOVA Geophysical Services

Levent Eskicakit, P.G., E.P.
Project Engineer

**RE: Limited Subsurface Investigation
31-07 38th Avenue, Astoria, New York (Z.A. & D. Service Station)**

Dear Mr. Klein:

CORE Environmental Consultants, Inc. (CORE) has prepared this letter report to summarize the results of a Limited Subsurface Investigation (LSI) performed by CORE at the Z.A. & D Service Station property at 31-07 38th Avenue, Astoria, New York (Site). The purpose of the LSI was to determine if subsurface soils at the Site have been impacted by current operations as an auto body repair facility. This letter report summarizes Site investigation activities and laboratory analytical results.

Soil Investigation

On September 10, 2013, CORE advanced a total of four soil borings to depths ranging from approximately 12 to 24 feet below ground surface (bgs). All borings were advanced inside the on-Site building. The soil borings were completed utilizing a hydraulic-powered direct-push probe sampler (SIMCO Earthprobe 200). A geologist from CORE was on Site to oversee advancement of the borings as well as to log subsurface soils and collect samples as necessary.

Soil samples were collected utilizing a 2-inch diameter macrocore sampler with acetate liner in 4-foot intervals. All macrocore liners were examined for visual evidence (i.e. staining and discoloration) and olfactory (i.e. odors) indications of impacts. In addition, soils were screened using a calibrated photoionization detector (PID) to quantitatively screen the soils for volatile organic compounds (VOCs). In general, the first macrocore encountered at each boring consisted of fill material composed of brown silty sands and concrete, consistent with urban fill. Groundwater was encountered in borings SB-1 and SB-2 at depths of approximately 22 to 23 feet bgs. Groundwater was not encountered in borings SB-3 and SB-4. No groundwater samples could be collected due to refusal at each boring location.

Soil borings SB-1 and SB-3, located in the northern portion of the building, were advanced to approximately 24 and 12 feet bgs, respectively. Borings SB-2 and SB-4, located in the southern portion of the building, were advanced to approximately 24 and 16 feet bgs, respectively. The approximate locations of each boring are presented on Figure 1.

Soil Sampling Activities

Soil samples for laboratory analysis were collected from each boring at the deepest unsaturated sample interval or at boring termination, whichever occurred first. No elevated PID readings were encountered in any of the soil samples recovered. Soil samples were transferred from the macrocore liners to laboratory-provided sample containers and preserved on ice.

Soil Sample Analysis

Samples were preserved at 4 degrees Celsius prior to and during shipment. All samples were shipped via courier under Chain-of-Custody procedures to York analytical Laboratories (ELAP Number 10854), a New York State Department of Health (NYSDOH) certified laboratory for analysis. Soil samples were analyzed for New York State Department of Environmental Conservation (NYSDEC) Commissioner Policy 51 (CP-51) Soil Cleanup Guidance memorandum VOCs and semi-volatile organic compounds (SVOCs) using United States Environmental Protection Agency (USEPA) Methods 8260 and 8270, respectively.

Soil Sample Results

There were no detections of VOCs or SVOCs in any soil samples collected from the Site. A summary of analytical results is available in Table 1. Laboratory Analytical Data is located in Attachment 2.

Conclusions and Recommendations

Field screening and laboratory analysis of soils at the property do not indicate that the current operations of the Site as an auto body repair facility have impacted the subsurface soils. Based on the findings of this LSI, CORE recommends no additional investigative or remedial activities.

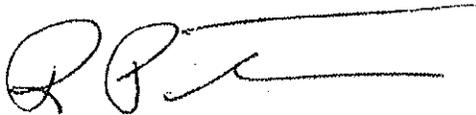

Summary of Attachments

The following Attachments are included with this report:

- Table 1 – Subsurface Soil Analytical Summary,
- Figure 1 – Soil Boring Location Map,
- Attachment 1 – Soil Boring Logs
- Attachment 2 - Laboratory Analytical Data.

Sincerely,

CORE Environmental Consultants, INC.

Ronald Tramposch
Project Manager

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on September 11, 2013 and listed below. The project was identified as your project: **31-05 38th**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 1310410

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Re: GPR Investigation and Inspection of Utilities –31-07 38th Avenue Queens, NY

Michael,

I appreciate the opportunity to work with you and the Athenica Environmental Services Company. All things considered I am pleased with the results of our survey from Thursday 6.4.15.

Ground penetrating radar was used to inspect and locate all underground utilities at the address listed above. The location was surveyed to locate any utilities that may be in the area prior to the drilling process. The purpose of this survey was to simply, determine if there is underground utilities located on this site.

On the following pages you will find information regarding the equipment we used, the survey process executed on site, and information on the results of the survey. Additionally, you will find photos of the areas surveyed for reference.

Equipment:

We used a GSSI (Geophysical Survey Systems, Inc) Ground Penetrating Radar Unit with one specific antenna. The GPR head unit is classified as a SIR-3000. The antenna used on this project was a 400MHz antenna which is capable of reaching depths between 5'-7' in the Tri-State Area. This specific antenna was created and calibrated specifically for locating underground utilities, UST's, and other underground anomalies. This equipment represents the latest technology available from GSSI. We have found the typical accuracy when surveying with the 400MHz antenna to be +/- 3" to the center of the object being located.

When determining the depth of an object GPR generally has a 10% margin of error. Please keep in mind that these statistics are based on ideal concrete conditions and may not necessarily reflect the findings from your project.

Finally, we also use an electro-magnetic tone locating device manufactured by Radio Detection. The specific model that we use on projects is an RD-7000. This device detects live power and RF signals underground, allowing us to locate electrical or telephone lines even if they are below the minimum size

requirements to be detected by GPR. It also allows us to detect utilities via induction or conduction with an exposed or known surface of the utility.

Survey Process/Results:

We covered all areas requested in the scope noted above in a grid pattern (North-South and East-West). Scans were placed on 2-3' centers in the areas scanned. This allows us the maximum amount of coverage. We then surveyed and marked any anomalies on the surface using typical spray marking paint. If and when utilities were discovered their path was painted directly on the surface. It is our estimate that we were able to penetrate to a depth of 5' on this project. The location was scanned around and inside of the location. We scanned as able around all cars and obstructions located on site. Being able to locate utilities running into the property let us know we are receiving accurate data on this site. The site was scanned to clear all proposed soil borings located on site.

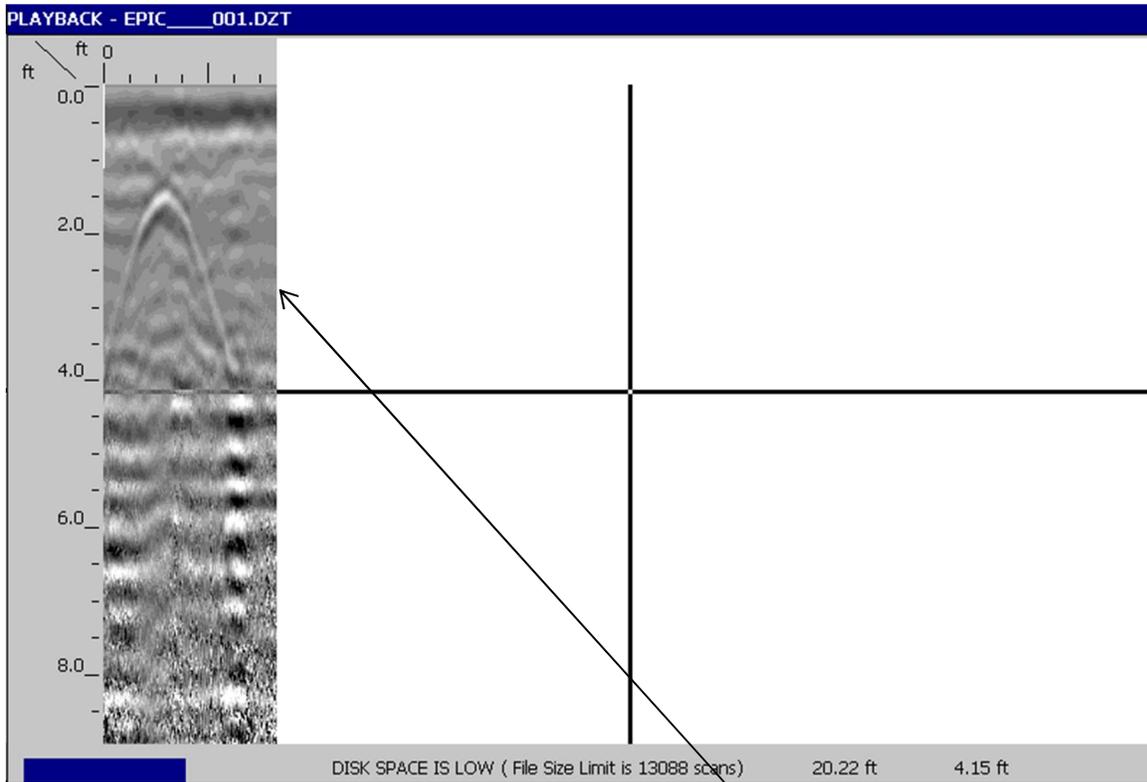

Conclusion:

The results above are based on the field findings from the relatively simple survey conducted. Again, restating the findings. There were several underground utilities located on site. On the following pages I have included pictures of the areas detailed and discussed above showing the areas surveyed for the utilities. If you have any questions regarding this inspection please do not hesitate to contact me. Thanks again for the opportunity and let us know if we can assist you in the future.

Regards,

Ken Williams

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 03, 2015 and listed below. The project was identified as your project: **31-07 38th Avenue 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F0140

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

S-D	The surrogates were spiked at twice the normal concentration and recovery is within limits.
SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCVO	CCV Out. Samples bracketed by acceptable CCVs.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Long Island City NY, 11104
Attention: Michael Mandac

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 04, 2015 and listed below. The project was identified as your project: **31-07 38th Avenue 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F0198

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
S-08	The recovery of this surrogate was outside of QC limits.
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCVO	CCV Out. Samples bracketed by acceptable CCVs.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 04, 2015 and listed below. The project was identified as your project: **31-07 38th Avenue 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

<u>York Sample ID</u>	<u>Client Sample ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>

General Notes for York Project (SDG) No.: 15F0199

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

460-00-4	Surrogate: p-Bromofluorobenzene	89.5 %			79-122						
2037-26-5	Surrogate: Toluene-d8	96.0 %			81-117						

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
15F0199-01	MW-1	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
15F0199-02	Trip Blank	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Notes and Definitions

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCVO	CCV Out. Samples bracketed by acceptable CCVs.
M-CCBNS	Analyte in CCB above MDL. Not detected in samples.
M-BCCB	Analyte in CCB > MDL. Sample conc. >10 X blank conc.
M-ACCB	Analyte in CCB. Run is bracketed by acceptable CCBs.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Corrective Action: Field blank did not come in with the other samples.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 05, 2015 and listed below. The project was identified as your project: **31-07 38th Avenue 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F0244

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Approved By:

Benjamin Gulizia
Laboratory Director

Volatile Analysis Sample Containers

Lab ID	Client Sample ID	Volatile Sample Container
15F0244-01	MW-2	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
15F0244-02	MW-3	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
15F0244-03	Trip Blank	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C
15F0244-04	Field Blank	40mL Clear Vial (pre-pres.) HCl; Cool to 4° C

Notes and Definitions

SCAL-E	The value reported is ESTIMATED. The value is estimated due to its behavior during initial calibration (average Rf>20%).
QL-02	This LCS analyte is outside Laboratory Recovery limits due the analyte behavior using the referenced method. The reference method has certain limitations with respect to analytes of this nature.
M-CCVO	CCV Out. Samples bracketed by acceptable CCVs.
M-CCBNS	Analyte in CCB above MDL. Not detected in samples.
M-BCCB	Analyte in CCB > MDL. Sample conc. >10 X blank conc.
M-ACCB	Analyte in CCB. Run is bracketed by acceptable CCBs.
J	Detected below the Reporting Limit but greater than or equal to the Method Detection Limit (MDL/LOD) or in the case of a TIC, the result is an estimated concentration.
HT-02	NON-COMPLIANT-This sample was received outside the EPA recommended holding time.
GC-Surr	Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the alternate surrogate.
EXT-D	The sample submitted contained sediment. The aqueous portion was decanted off, the volume measured and used for the extraction. The sediment was not included in the extraction.
CCV-E	The value reported is ESTIMATED. The value is estimated due to its behavior during continuing calibration verification (>20% Difference for average Rf or >20% Drift for quadratic fit).
B	Analyte is found in the associated analysis batch blank. For volatiles, methylene chloride and acetone are common lab contaminants. Data users should consider anything <10x the blank value as artifact.
<hr/>	
*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.

Non-Dir. Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

APPENDIX I

LABORATORY ANALYTICAL RESULTS

FOR SUB-SLAB AND SOIL VAPOR SAMPLES

Technical Report

prepared for:

Athenica Environmental Services, Inc.

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 04, 2015 and listed below. The project was identified as your project: **31-07 38th Ave. 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

<u>York Sample ID</u>	<u>Client Sample ID</u>	<u>Matrix</u>	<u>Date Collected</u>	<u>Date Received</u>
15F0202-01	SV-1 (Y19)	Soil Vapor	06/04/2015	06/04/2015

General Notes for York Project (SDG) No.: 15F0202

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03 This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.

Field Chain-of-Custody Record - AIR

NOTE: York's Std. Terms & Conditions are listed on the back side of this document.
This document serves as your written authorization to York to proceed with the analyses requested and your signature binds you to York's Std. Terms & Conditions unless superseded by written contract.

Attention: Michael Mandac

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 05, 2015 and listed below. The project was identified as your project: **31-07 38th Avenue 15-133-0416**.

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the attachment to this report, and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 15F0247

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation, unless otherwise noted.
6. All analyses conducted met method or Laboratory SOP requirements. See the Qualifiers and/or Narrative sections for further information.
7. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
8. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.

Notes and Definitions

QL-03 This LCS analyte recovered outside of acceptance limits. The LCS contains approximately 70 compounds, a limited number of which may be outside acceptance windows.

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
